

PID	Timestamp	Note	Quote	Issues	Reactions to Interface	Reactions to LLMs
P01	12:33:19	And how about I just copy and paste this?				
P01	12:33:37	And just, um... Prompting a little bit reframing the instruction.				
P01	12:33:51	money lost to fraud at cross payment methods.				
P01	12:33:56	So ideally, I want to get is like total money and a breakdown on different payment methods.				
P01	12:34:05	Um, so I just sent, uh... My first prompt.				
P01	12:34:11	Just naively transforming the instruction. I'm waiting for the response.				
P01	12:34:18	And the formal instruction says once I get a response, open the sidebar.				
P01	12:35:02	Yeah. I'm just waiting.				
P01	12:35:55	Okay, I got a response. All right. So the total seems 5.4 billion in 2024.				
P01	12:36:05	Um, there are just shares came from bank transfer.				
P01	12:36:10	and the second largest is cryptocurrency. Okay, so now let's see the sidebar.				
P01	12:36:17	So this thing, right? Okay.				
P01	12:36:23	So I see... I see it. Yeah. So this is like step down step to step breakdown of the data analysis that the.			Y	
P01	12:36:33	This conversational user interfaces did. Uh, to output the outcome that's written in the chat box.			Y	
P01	12:36:43	time and I kind of, like validating the output by looking at that.			Y	
P01	12:36:51	So I can see the... Description... Yeah, this is just.				
P01	12:37:00	So I can first see the source data. Deeports, credit cards, payment offer service debit cards.				
P01	12:37:11	Okay.				
P01	12:37:22	Yeah, this already like kind of like synthesizes a lot of different informations.			Y	
P01	12:37:32	Across. Different... victim background amount.				
P01	12:37:43	conduct method, payment method. Okay.				
P01	12:37:52	All right. So let's see... How this is, um... processed in the step 2.				
P01	12:38:02	Okay, I want to see the target table diagram.			Y	
P01	12:38:10	Okay, so it says to force focuses on payment method.				
P01	12:38:17	Okay, and then select these two columns, and then prepare the target table. So let's see the target table.				
P01	12:38:27	Okay.				
P01	12:38:33	Okay, let's see if this target table is actually the same or the corresponding to the.			Y	
P01	12:38:42	the row theta. in the step one.			Y	
P01	12:38:47	Okay. Moroads. I can't see the is it okay to click this full CSV. So I see the photo data.				
P01	12:39:01	Okay. Yeah, it looks like actually the same. So okay, it's great.				
P01	12:39:07	And then I can now see how this finery.				
P01	12:39:13	leads to the. the tickets output that I see. Okay.				
P01	12:39:18	So I could kind of like reason through. Okay, so I'm back. All right, so now I'm super confident.				
P01	12:39:28	So this ChatGPT thing is not hallucinating, I think.				Y
P01	12:39:33	Okay, so I was able to see the sidebar, and my answer is 5.4.				Y
P01	12:39:41	Here you go. Uh...				
P01	12:39:47	Here we go. Once the urban power systems response. Okay, so I can just.				
P01	12:39:54	Copy paste this part.				
P01	12:40:00	Here we go. I'm very confident. How ready would you be able to act on this result to make the same in your job prioritizing enforcement actions and so forth. So what I would do.				Y
P01	12:40:14	Based on that, it's like... I think do something on these two payment methods.				Y
P01	12:40:22	Um, and so forth. And probably we'll do the... conduct methods and so forth how it's related to, um.				Y
P01	12:40:34	variation between the payment method and conduct methods and so forth.				Y
P01	12:40:40	Briefly describe how you arrive at your answer. What step did you take? What information did you work out?				
P01	12:40:48	First I. Alright.				
P01	12:40:53	The text output.				

P01	12:41:02	system.							
P01	12:41:06	All right. Output.							
P01	12:41:15	Yeah sidebar. Sure.							
P01	12:41:21	Features. Okay, I trust the system's recommendation decision. I'll say so. The only the only risk is that this gathering CSV that's all source data might be like.	concerned with data source						
P01	12:41:35	or something like that. But aside from that, um, any downstream process like very clear and trustful, I would say.						Y	
P01	12:41:47	All right. So next up... Is this? Okay. So so this is specific to the sidebar.							
P01	12:41:56	Dingy. Okay.							
P01	12:42:02	Okay.							
P01	12:42:06	Okay, so this is kind of like each question is like a scenario. It's like, how useful each feature is. Yeah, yeah. But this is not nothing to do with this Xpc. Right? So now I can kind of like expand on that. But the content doesn't really matter.							
P01	12:42:21	Got it, you got it.							
P01	12:42:31	Yeah, I think the feedback for my take on this bar is, yeah, yeah, this is like a summary and description of the data sets, say. But like, let's say, imagine the scenario that you know the ChatGPT kind of interfaces gathers from the Internet and scraping.							
P01	12:42:49	It would be useful if that also shows some, like, the source URL or something, if I want to also visit the URL, then see and validate the source. So that's why I put 4.					Y		
P01	12:43:12	Yeah.							
P01	12:43:25	It is nice to kind of like annotate which tables like are of interest to users, and the user can kind of like.							
P01	12:43:36	highlight the priority to the system. So system can also optimize to the user's needs. So I'll say 4 in that as well.							
P01	12:43:52	Yeah. Uh, the reason I put these 3 on this table summary stats and and table preview are because these are very standard features and not particular about this specific system.							
P01	12:44:12	I like this a lot because it's kind of like improves the transparency.							
P01	12:44:20	of the systems processing. I also like that a lot.							
P01	12:44:27	This is just a visualization of what's above.							
P01	12:44:33	I think I didn't use that feature, the code generation, but it will be extremely useful for people actually code, you know, in Python or R or whatever to to.					Y		
P01	12:44:45	To do the data analysis, um, because they mostly use these tools ad hoc of their existing.							
P01	12:44:55	existing workflow and, you know, code generation is really, like, the universal interface for them, so...							
P01	12:45:07	Yeah, I didn't, um, explore these features free, so I just put 3.							
P01	12:45:16	Yeah, this is this must be very useful for people who have no idea of the Column name.							
P01	12:45:22	Also, I put 5 on this. Yeah, I like the UI.							
P01	12:45:28	Um, I really like this kind of like, yeah, this kind of like open AI, ChatGPT kind of thing.					Y		
P01	12:45:35	Um, you know, step by step, but for data analysis.					Y		
P01	12:45:40	Yeah, I didn't I didn't explore, so I can't say. But this seems very useful.							
P01	12:45:51	Yeah, I use this actually. It was very useful.							
P01	12:46:00	I think it might be more rigorous in terms of user study. If your task kind of forces the user to.							
P01	12:46:11	to do the coding to anything, um... Well, yeah.	suggest to force user to use certain feature						
P01	12:46:18	Okay. I'm doing the. the interview. Sorry, the questionnaire usability questionnaire.							
P01	12:46:32	I found the system unnecessary complex. I'll say neutral. There must be some features that looks redundant. I mean, I think there's no one fits for all UIs, right? So this try to cover like as whole series as possible. But to a certain person, it might be an overkill sometimes. So.					Y		
P01	12:46:53	That's why I put 3. So the system was easy to use. Yeah.							
P01	12:46:59	Now we need the support of a technical person to use this system. I don't think so.							
P01	12:47:06	I think the step-by-step instruction and the user interface tops are very, um... Serient to me.					Y		
P01	12:47:20	I mean, I think it depends on like how often users use other types of, like.					Y		
P01	12:47:27	conversational-based AI interfaces, so I use ChatGPT a lot, so I was already familiar with the interaction patterns.					Y		
P01	12:47:38	I found the various functions in this system were well integrated.							

P01	12:47:42	From the description to diagram visualization and so forth. As long as what I saw, I I say so.						
P01	12:47:55	There are so many, like, I think advanced features about code snippet generations and so forth. That was like.	miss features			Y		
P01	12:48:04	easy to miss if you're not paying attention. So if you think about the system integrity in a way that it is like easy to have an overview of all the functions and so forth.				Y		
P01	12:48:19	I'll say three. I thought there was too much inconsistency in the system. I don't think so. There was not inconsistency per se.						
P01	12:48:29	So I'll say one for that. I think I need. Yeah, yeah. Okay, I would imagine that most people would um to use this system very quickly.						
P01	12:48:42	Uh, it depends on the person. For most people, I'd say four. I found the system very cumbersome to use.						
P01	12:48:51	Yeah, I felt very confident using the system.						
P01	12:49:00	accessory, because I was kind of discovering the features and, you know, learning at the same time. So yeah.						
P01	12:49:09	I needed to run a role of things before I could get going with this system.						
P01	12:49:17	not. Is this question about during during the session?						
P01	12:49:22	Or does that include my background in data science and, you know, background in like previously using this like ChatGPT services and so forth. You know, there are a lot of like narratives that I have already before I encountered a CUI. Yeah, I guess it's just... it's more about, like.	asked what qualifies as knowledge learned before					
P01	12:49:41	like like when you personally interact with system like with like whatever you have learned so far, because I guess, like.						
P01	12:49:48	is kind of like it depends on individual difference that we kind of like capture that and also like it's like the target users people work with data, maybe like at all different levels. So.						
P01	12:50:01	Yeah, it's just like, I guess just based on your.						
P01	12:50:08	as parents based on my experience, and I'll say.						
P01	12:50:12	I didn't. I didn't have to have any extra knowledge to be able to use this system, because I... As I said before, the introduction patterns is very familiar with me. And you know I do all these kind of like data rendering and you learn because you have base knowledge about something. Yeah, yeah.						
P01	12:50:37	Yeah. But I guess it wouldn't be too much of a problem, because it's a.						
P01	12:50:42	We didn't group study like you have another task.						
P01	12:50:42	So yeah, so it wouldn't be a problem, because as you interpret this, let's do this. Okay.						
P01	12:50:50	And we can just, you don't have to log in again because I just have to, uh... help you switch the task. Got it. Yeah, just like once we go to the interface, I need to switch model. Got it.						
P01	12:51:16	So the same thing, I'm going to And you have to switch model, maybe do a new chart. Oh, okay.						
P01	12:51:23	Yeah. Yeah, yeah, yeah. And do a new chat. Okay. This is okay. Thank you.						
P01	12:51:52	So I sent a prompt.						
P01	12:51:59	So a difference from the previous task is the previous task asked to ask me to report a number. This is more yes, no question that follows up with, um... you know, reasoning, um...						
P01	12:52:20	Okay, so waiting time.						
P01	12:55:07	color response. Okay, so... It examines over time from 2020 to 2023.						
P01	12:55:18	per year, there are. summarizing in really one sentence, like... condition of exceedance of the rainfall.						
P01	12:55:32	Sorry, exceedance of rates of the fresh water. and 3 and 4.						
P01	12:55:47	Yeah. exceedance rate.						
P01	12:55:51	Paying for it.						
P01	12:56:17	Yeah. Okay. So yeah, compared to the previous years, the the trend is... trend of exceedance rate and rainfall like coincide. Yeah.						
P01	12:56:30	Yep. Okay. So I can already answer the yes or no question.						
P01	12:56:42	and. before I report the confidence. So let's see the feature.						
P01	12:56:54	This time I don't see the condition right in this condition. There is no. Oh, okay.						
P01	12:57:04	I hope to see more, like, um, you know. The... break down, like, step-by-step reasoning of the system and.				Y		
P01	12:57:14	Hopefully you wanted to check up with the source data.						
P01	12:57:21	Um, there are two risks. There might be some, uh... false reasoning in the system, and also that they might be made up with, uh... Um, with the source data, so there's no way for me to...				Y	Y	

P01	12:57:39	to examine whether this like. information is already available. So.						
P01	12:57:48	I would say neutral 5050. How did you be able to act on these results? Yeah, before before I do some action like policymaking or anything, or like writing a report to to my my boss or something.				Y	Y	
P01	12:58:06	Need to do the double check by myself. So I say it didn't require some time before I can do anything on that immediately. Yeah.				Y	Y	
P01	12:58:15	Here, I'm a sure answer. Um, just so that chat.						
P01	12:58:23	Setboards output. I trust this system and its recommendations.						
P01	12:58:30	I'll say neutral. Yeah. I think that I would like to use this frequently, assuming that there is no access to these things.						
P01	12:58:40	I'm not sure. It'll be...						
P01	12:58:49	To me, this baseline condition feels like. just using ChatGPT, but inferior in the sense that ChatGPT by default already showed some URL that is clickable and so forth. So I would just prefer to use Chat over this one.	suggest chatGPT also gives link				Y	
P01	12:59:08	I found the system unnecessary complex. No, this is extremely simple. I thought the system was easy to use, of course.						
P01	12:59:16	Um... I say so. I think that I would need a support over.						
P01	12:59:22	I wonder about yours function in these systems were well integrated. There's not much... there's no... various functions. So, um... I say neutral. I thought there was too much inconsistency. I don't think there is no inconsistency. I would imagine that most people would learn to use this system very quickly. I would agree that found the system very cumbersome to use. I don't think so. I feel very confident using the system. Yes.						
P01	12:59:52	I needed to run a lot of things before I could get into it. It's just ask, right? So.						
P01	13:00:01	Yeah.						
P01	13:00:05	All right. Is that all? Yeah, let's make sure that everything is Oh, yeah. But like, yeah, but just like one second before we close this, can I ask a follow up question? Yeah, yeah, I just wonder like, Have you thought about, like, maybe like.	asked a follow-up question after P01 submitted the response					
P01	13:00:21	like chatting with the interface a bit like to. Oh, yeah, yeah, I think, yeah, you mentioned that you think that there are 2 things that the system might get wrong. Okay, okay, okay, yeah, let's do that right now. I also wonder, like, why you don't.						
P01	13:00:36	Through that at the first place. Um...						
P01	13:00:43	I think I had a bias from the previous condition that the system should proactively provide all these things without without my.	didn't asked more question because they believed th	Y				
P01	13:00:54	my like burden to like ask. Yeah. But I'm actually now curious. So if this can do that, this is just calling a open AI right? So.						
P01	13:01:18	I think the reasoning process process is kind of like.						
P01	13:01:23	the structure of thinking that this this one, this AI agent operates is like fixed to follow this step one to step 10. So if if users like ask, it's like something this simple.						
P01	13:01:36	Um, oh, but they could bypass that, so it was reasonably fast.						
P01	13:01:45	Oh, it says... let me do that, but it doesn't actually output. This might be actually like the affected by that, you know, thinking.						
P01	13:01:57	thinking. steps that is kind of hard-coded into this AI engine to like step one to step 10. Yeah. So so in any way like like I just did before right now.						
P01	13:02:11	Um, it might be hard to just keep compensating with this one, because it's kind of, like, hard for it to be a specific data analysis and agent. So I think it's like a trade-off between.						
P01	13:02:26	variability and efficiency in a specific task. So definitely, I need some sort of features like I saw in the first condition for this case.				Y		
P02	14:40:57	Going Credentials... Thanks.						
P02	14:41:06	Your data analyst.						
P02	14:41:58	Okay. So I should chat about... I'm going to ask questions about.						
P02	14:42:08	the swimming pool... Water quality are swimming beaches, water quality and rainfall.						
P02	14:42:17	Rainfall... Great.						
P02	14:42:29	Show me basically I want to. I want the system to show me.						
P02	14:42:35	Both data, like show me the... Water contamination data and show me the rainfall data, maybe put them into plots based on time, and maybe put them in the same plot. So... I'm going to say...						
P02	14:42:52	Show me the... Model quality.						
P02	14:42:58	What is it? A. And at least one pictures.						

P02	14:43:56	Yeah. So I want to see. I want to see the exact contamination level instead of just overall quality. So I'm going to say.						
P02	14:44:04	Show me the water contamination level at public swimming beaches data.						
P02	14:44:09	And ring for... Great.						
P02	14:44:19	Um, the timeframe of... I'm coming to 2023.						
P02	14:44:27	Single pot.						
P02	14:44:36	Let's see how that goes.						
P02	14:45:36	Should I just ask this question to the system directly, or it's okay, I can ask any question. You can ask any question. Yeah, you're gonna ask just like you're trying to solve this question. So whatever you want to do. Okay, yeah. What does the system answer me? Should I? Oh, yeah. So for your answer is like, what do you believe the answer is? And the system answer is just like whatever being returned, or like.						
P02	14:45:58	kind of like you consider what being returned as the answer to this question, because if it returns, like, say, multiple rounds, then just the most relevant. I see, I see.						
P02	14:47:26	Okay, so the system gives me back a... System gives me back a.						
P02	14:47:35	Python script, and I will probably just run it.					Y	
P02	14:47:43	Oh, which is pretty nice because I feel like... Given a script, given me a script to.					Y	
P02	14:47:51	Where's the open?					Y	
P02	14:48:02	Well, I thought I'd given me a script, and so that the scripts analyze the actual database gives me confidence is that like the AI is not faking any data.					Y	
P02	14:48:13	in that way. So I kind of like the but I'm still waiting for the.					Y	
P02	14:48:21	Wait for the system to finish running the script.					Y	
P02	14:48:55	The system is after I run this script, there should be a plot. But I don't. Is the is this a bug or I'm actually not sure, because, like, there could be some like randomness with like how we prompt the language model. But like also like.			Y		Y	
P02	14:49:11	in terms of like, what would you do like if this is your laptop? Just take this laptop like whatever you want is fine. Sure.						
P02	14:49:22	Okay. I am gonna... there is a code interpreter. I'm gonna see what is that for. Okay.			Y			
P02	14:49:34	I'm also going to just ask the system that there is no part.						
P02	14:49:39	There is no problem.						
P02	14:50:50	The system responded like a few. Error messages. But still it didn't show me the actual plot. I'm gonna enable this execute code for analysis. This is code interpreter and see how it goes.	kept asking for a plot		Y		Y	
P02	14:51:08	I'm going to just ask it to... Run the code wrongly.			Y		Y	
P02	14:51:27	Yeah, probably just like that.			Y		Y	
P02	14:52:01	Okay, there is still no.			Y			
P02	14:52:08	There is still no plot coming out of it.			Y			
P02	14:52:14	Minnesot.						
P02	14:52:46	Okay, I think the plot is not working. So I'm just going to ask it to return the.	switched to ask for texts					
P02	14:52:53	Return the text. Every like just show a bunch of text based on the data.						
P02	14:53:05	see the plot.						
P02	14:54:45	Oh, what did. I'm going to tell it that's just sending text.						
P02	14:54:52	So just.						
P02	14:56:22	I think the data return is. Not very understandable in a way that it doesn't show me the text as well. So I'm just going to.	still not showing valid result, proba	Y				
P02	14:56:34	Instead, I'm just going to throw the question to R.					Y	
P02	14:56:48	Ask it to show me why they come to this conclusion.	asked about the process without the sidebar		Y			
P02	14:59:32	Okay. Now that, um...						
P02	14:59:44	Now that the system showed us. the plot that like.						
P02	14:59:51	Not a plot, but like the exceedance rate and the rainfall.						
P02	14:59:55	data in text. I can see.						
P02	15:00:02	Yeah, I can see some correlation between... Excellence rate.						
P02	15:00:37	It also showed us the system also showed the person Pearson correlation. So.	correlation					
P02	15:00:43	Okay, I think I can come to a conclusion.						

P02	15:02:01	Yeah, maybe you can also like verbalize a good like sure.						
P02	15:02:07	So I think I am. Um, pretty... Convinced by the... Systems respond. But I am. I didn't go like extremely confident because it.						
P02	15:02:23	When I asked it, um... to just give me the raw data. It kind of failed on that one. It doesn't show me the plot or the raw data until I just.	not very confident because failed once			Y		
P02	15:02:35	next to show the reason behind it. And also the data point itself because it's kind of sparse. So I still I don't think we can come to a very strong conclusion based on that.						
P02	15:02:48	So that's where I am not so confident about it.						
P02	15:02:53	And we'll be ready to act on this result.						
P02	15:02:57	to make a decision in your job. I am not that... confident on this decision to to make it like to make a change.						
P02	15:03:08	Because I wanted to see more data. and only like only 4 data is slow disperse.				Y		
P02	15:03:20	Yeah. So do I trust the system's recommendation? Yes, but I need... I would need more data. I don't think the data issue is the systems issue. I would think that.				Y		
P02	15:03:32	If we have more data, the system could also help with analyzing that. So.				Y		
P02	15:03:37	Yeah. Let me go to the next one.						
P02	15:03:44	Okay, systems usability.						
P02	15:03:49	I want to use this for home, I think.						
P02	15:03:53	I still wanted to use it. But I didn't go to fully frequently, because there are still some. I feel like there are still some bug when I was using the system, or.						
P02	15:04:05	This is a field to respond with like. pot is something that I am... Struggling with... Unnecessarily complex. It's my own.						
P02	15:04:18	I don't really agree that the system is complex. I think it's very easy to use.						
P02	15:04:23	And yeah, I think it's rather easy to use.						
P02	15:04:29	I need to support a technical person to use the system.						
P02	15:04:33	I think I. Well, I think I kind of need the technical person to use it, because, um... There are still some.			Y			
P02	15:04:45	issue when I was asking it to generate the pod.			Y			
P02	15:04:51	The various options in system more integrated.						
P02	15:05:00	I don't... I don't think I think the system function integration needs those needs some improvement.						
P02	15:05:07	Especially in terms of executing code. So I'm going to click on neutral here.						
P02	15:05:18	I thought there were too much inconsistencies. I don't see much too inconsistency.						
P02	15:05:28	Well, yeah, I think based on text and giving the system text and it would respond with a analysis would be make the system very easy to learn.						
P02	15:05:38	cumbersome a little bit, because like you still need to.						
P02	15:05:44	Like you go back and forth a little bit on the data.						
P02	15:05:48	on the system to let it generate main reason I'm not very... find it a little bit cumbersome.						
P02	15:06:01	Confident using the system. I think I am still overconfident because I still it's like everything the analysis. It seems to be based on code.						
P02	15:06:13	And I don't think if the system could give like false positive feedback. So I think that's pretty nice.						
P02	15:06:25	No, I don't think I need to own anything before I... And this will go on.						
P02	15:06:34	You don't have to re-log in. We just switch to a different model, and it'll start a new chat. Okay.						
P02	15:06:43	Yeah. Cool. All right, let's see how that goes.						
P02	15:06:52	Federal Trade Commission.						
P02	15:08:15	It's going to still put in the system, putting the question directly to the system.						
P02	15:08:19	Let's see how would that behave.						
P02	15:10:43	data system gives me packing number. Okay, I need to see the sidebar first.						
P02	15:10:56	Okay.						
P02	15:11:30	Interesting. So... the system kind of shows the its process of how how it arrives at the answer.				Y		
P02	15:11:43	I first go through the need to first go through all the tables and found the.						
P02	15:11:50	table that has.						
P02	15:11:56	There's different methods. They have different. Offered by different mapping methods. And I'm going to see if they're all... If there are other, um...						

P02	15:12:15	the other...						
P02	15:12:21	Under reports.						
P02	15:13:13	Okay. The table, the data looks good to me.					Y	
P02	15:13:39	the 51 squared that it used to generate it.					Y	
P02	15:13:55	I think the test, the the Python script is needs. It would be beneficial if there could be some.					Y	
P02	15:14:07	There could be some explanation for how this code works.					Y	
P02	15:14:11	Let's see.						
P02	15:14:35	Ah, there's explain code. Okay, let's explain.					Y	
P02	15:14:57	Okay, I'm going to just see the full...						
P02	15:15:05	Actually, let me just leave one thing. I think I forgot to do that. Sorry before we jump into this.						
P02	15:15:25	Well, I guess it's safe for us to... Maybe we need to refresh.						
P02	15:15:53	Probably, probably because I asked it to generate something, and then like real hard. But let let's read a bit. Otherwise, we can also start a new chat. I'm trying to do this again. Sorry about that.						
P02	15:16:07	Oh, it says open.						
P02	15:16:17	Should we do this again? Oh, yeah, maybe lessons will ask that. Yeah, that's like definitely a new bug. I have never encountered.						
P02	15:16:28	Yeah, yeah, that's... Wait. Oh.						
P02	15:16:33	Yeah, kind of. Do you like anything?						
P02	15:16:39	I shouldn't. Oh, that's back. Okay. Let's see, let's try one more time. Oh, right. It's back. Okay.						
P02	15:16:49	Go back to the... I was here... Oh yeah, and you are trying to download it. Yeah, there you go.						
P02	15:17:01	Okay. Okay, we have a table. I'm just going to use.						
P02	15:17:09	I'm just going to use Excel function. To, um...				redid the work but using target table		
P02	15:17:22	sum everything up. Okay.						
P02	15:18:05	enough winner, probably because like the the parentheses. Okay.						
P02	15:18:21	Syntax error.						
P02	15:18:37	Thumb is fine. 5435435. So that's how I come to this. That's my answer. It's 5, 4, 3, 5.						
P02	15:18:50	and it kind of matches here. So I. I'm happy with that, but let me just see how this explain code will work.						
P02	15:20:19	tickets. So, on... Yeah. It could be. Okay, I will probably. So if this is happening in real time, real life, I'll just go back to the conclusion.						
P02	15:20:31	So, um... The system also answered.						
P02	15:20:37	I see.						
P02	15:20:41	Okay, I'm pretty confident that this is correct. Not not only because of what? Well, first of all, my own.						
P02	15:20:50	Answer Manchester, the system answer. But also the system is still using like it's telling me how it generates the data in a very nicely form in this like.					Y	
P02	15:21:02	Oh, now we have it. Let's see the response.						
P02	15:21:07	The X10 is very nice.						
P02	15:21:11	Open Queen Stage.						
P02	15:21:17	Oh.						
P02	15:21:23	Okay. Wow.						
P02	15:21:27	This is very nice. I feel like the, um...						
P02	15:21:34	Um, the code explanation is... Very helpful in terms of you can kind of matches what is the variable in the code and what it correspond to the.					Y	
P02	15:21:46	Um, columns in table, so... very good.					Y	
P02	15:21:59	Clean the station...					Y	
P02	15:22:04	meeting Trump cleaned.					Y	
P02	15:22:15	Okay.					Y	
P02	15:22:23	It also kind of highlights...					Y	
P02	15:22:28	And it's the variables. If you click it, it kind of highlights it across.					Y	
P02	15:22:35	see. Across the explanation and inside the code.					Y	

P02	15:22:44	Pretty nice. So I'm confident in terms of the system's response, because first I understand this shows me where the data comes from, where the how it is being processed. And not only in this raw code, but also.	Y		Y		
P02	15:23:03	There's a good annotation on the code telling me which variable matches to which column of the data coming from.			Y		
P02	15:23:14	Yeah, I think the...					
P02	15:23:19	The result itself is very solid, so I can make some decision based on this one.					
P02	15:23:27	So I first asked it how much money we lost every year.					
P02	15:23:33	It generates.					
P02	15:23:38	And then, sir. and show you...					
P02	15:23:47	Should mean the process.					
P02	15:23:53	Oh...					
P02	15:24:04	The stance is generated. The I think there are 2 steps that's very important.					
P02	15:24:12	Two key steps. are what data is it?					
P02	15:24:22	Using? And how is...					
P02	15:24:34	Those are the steps.					
P02	15:24:44	In this type of view.					
P02	15:24:51	Yeah, I pretty trust. The systems...					
P02	15:25:06	Data set content. I don't think I used that. Okay, yeah, I don't think I used it.					
P02	15:25:14	Oh, it's mutual. Would be nice if I export that.					
P02	15:25:20	This is very useful to show me what actual table it looks like.					
P02	15:25:27	I don't think I export that over. This one is very useful in terms. I can see what the data is about.					
P02	15:25:38	Into summary state.					
P02	15:25:43	Operations.					
P02	15:25:49	Yeah, I think this one I didn't find it so useful, but it's nice to have explained. So I'm keeping it as neutral.					
P02	15:26:00	Um, because I will... I think I know... Even though it doesn't tell me, I still know, okay, you are working on this dataset.					
P02	15:26:09	Now we have this operation diagram. Okay.					
P02	15:26:17	Well, this I didn't use this data diagram that much.					
P02	15:26:24	Co-snippet is good, because I know what's what a cool code is being used.					
P02	15:26:30	And the explanation is very useful in terms of how.					
P02	15:26:34	how interactive it is, and also how... Um, how you kind of manages which data coming from the database is represented by which variable in the code.					
P02	15:26:48	So very nice overall. I don't think I used a column dictionary.					
P02	15:26:57	I used to be used to be nice. The step navigation is very nice, because you can see, okay, what are the each step is working on? So you have a clear pipeline understanding.					
P02	15:27:11	Step description... I don't. I feel like I just don't like looking at too much text. Now, given that I have this beautiful Gi.					
P02	15:27:25	I didn't use this editing. So keeping it as usual. It would be very nice if I can actually edit that, but I didn't use it.					
P02	15:27:37	actuation will be very useful. Download files is very useful for me to verify.					
P02	15:27:42	In terms of what the data is actually actual data looks like.					
P02	15:27:53	No.					
P02	15:27:56	Yeah, I kind of like the system, especially how it kind of explained the code in a very interactive way.			Y		
P02	15:28:03	Not too complex. Very easy to use.					
P02	15:28:12	Somehow, I don't think I need a technical person because I every step, if you need to, you know, if you need to change a data source, if you need to change a different code, you can still do that in the system.					
P02	15:28:25	I feel like it's pretty easy to use. Yeah, the system functions pretty well integrated.					
P02	15:28:34	It's kind of, you know, connected with each other.					
P02	15:28:39	I don't see too much inconsistency. Yeah, the system is very intuitive.					

P02	15:28:48	Not too much cumbersome. I am confident.							
P02	15:28:54	No, I think especially. I don't need to learn a lot of stuff because especially the code is very well explained, so I don't even need to understand. Okay, what is the code doing anything? So.							
P02	15:29:13	Okay. Yeah. Thank you so much. It's like taking an hour. I'm sorry. Keep you here forever and especially you have a submission.							
P02	15:29:23	Yeah, can I just like ask one follow-up question? I guess one is about like like because like I saw you like copy and paste like question to the like system. Yeah, I guess it's like, especially because, like, with the 1st, your 1st experience interacting is I just like wonder like.							
P02	15:29:40	I guess, like, realistically, if you... if the question you are trying to solve is more, like.							
P02	15:29:48	like latent in your mind. Yeah, yeah, yeah. Then, like, maybe, like, facing that situation. What would you do?							
P02	15:29:59	You mean in doing my first interaction with the first system? Yeah, yeah, yeah, yeah. I guess it's just like because you kind of like I noticed that you were kind of like realized the coding part just doesn't work. So ask you something else. So I was like when you release too exciting, what would you do?							
P02	15:30:15	I don't I feel like it will be hard for me even like it will be hard for me to.							
P02	15:30:21	trusted system if if I... first, I wanted to ask the system to give me the data, but the system failed at doing that.							
P02	15:30:30	and I won't expect it to be able to analyze the data, because I don't think you even have that data to me. So I would just maybe ask it to.							
P02	15:30:38	And maybe I would just not use this system, or I would just reach out maybe like find a way for the system to output the data to me like maybe let not not use it to analyze the data, but like to find the relevant data to me. So but I feel like it's still not as intuitive as the second one where you can see.	The first system failed to answer b	Y					
P02	15:30:58	How was the data chosen? Because even in the first one, it kind of already chose some data, but the decision for that is very like.							
P02	15:31:06	Not obvious and not, like... you know, not visible to me, whereas when when I was interacting with the second one, it kind of very it's very, you know.							
P02	15:31:19	It's very open about what are the available data and why are these data available relevant? So even at the data exploring stage, I think the science system is better. Yeah, I see, I see. I guess it's, like, maybe, like, when the question is less clear.							
P02	15:31:36	You probably would like trying to find the relevant data. So that's kind of like similar to the structure of I guess also another question is, like, maybe, like, yearly, like, how, how well do you trust, like, say, ChatGPT?							
P02	15:31:52	or trusting ChatGPT for data relevant work. I... I I would, I would be more suspicious if it just outputs the.						Y	
P02	15:32:03	You know, its analysis with, like, text-based analysis, whereas I feel like.						Y	
P02	15:32:10	I would usually just do either I would use it, let it do a visualization. I don't trust it a little bit more or I would like to have a script that can do that for me. So in general, if it's just GPT.						Y	
P02	15:32:25	Just text-based GPT. I won't be able to trust it that much. Yeah, actually. Okay, just follow up just a bit like in terms of like visualizing the data, like, do you think like is like if you can see the trend, and then that would give you some. Is there like you have some prior about what the trend would be?	still wanted to see plot					Y	
P02	15:32:47	Yeah. I feel like. I... I would want to see the trend.			Y			Y	
P02	15:32:55	And because I feel like giving me a trend will give me better understanding of what's the data like, especially in the first one, how... how... especially when you're analyzing the, like, relationship between two data points or the like the trend between two.			Y				
P02	15:33:11	Um, data points... It's having a visualization will definitely help with, um, I will trust visualization more. So it's like, you probably have some rough expectation about the pattern, where it's just, like, not too crazy or something, yeah. I would have some... I also have some expectations.			Y				
P03	16:34:14	All right. Okay, I'm given few tasks here in the test one says you will complete a total of 2 tasks using our system to export data and answer a set of questions.							
P03	16:34:27	And, okay, it should takes no more than 15 min, and you complete each task. Please explore data using system. Okay, submit your final answer rate confidence briefly explain how you arrive at your answer.							
P03	16:34:46	Okay. The information seems to find... Okay.							
P03	16:35:00	If the others is already logged in. So some importance for online version.							
P03	16:35:04	Oh, okay, I guess I can skip that. All right. Here's the question AI 1. So I am a data analysis at the.							
P03	16:35:16	Federal Trade Commission. Uh, so basically some... Some guy working with data.							
P03	16:35:25	Your team analyzes consumer fraud reports to the FTC portal which compels submitted by consumers across the US, and you are estimating the total amount of money lost to.							

P03	16:35:39	fraud to qualify the overall financial impact and lean for.						
P03	16:35:44	If enforcement properties. All right. This system determine the total amount of money lost to fraud across all company methods.						
P03	16:35:57	Uh... And I guess I'm just going to gather all the data from this.						
P03	16:36:03	Model. All right. please.						
P03	16:36:10	Tell me...						
P03	16:36:14	I was wondering if it's... you know, as simple as just accumulating all the.						
P03	16:36:22	amount of... lost in the fraud and there will be... some conditions on that. Maybe. But.						
P03	16:36:35	Tell me. for the the frog.						
P03	16:36:47	So I have a question here. So I'm assuming I'm given a bunch of data, or am I about to collect those data from this model, or so the the model have access to some data like it can also search online.						
P03	16:37:02	So yeah, so it's like, I guess the scenario is like, you know, the model potentially have access to the data relevant to this question. It's like just like.						
P03	16:37:11	broadly relevant to, or at least have access, maybe, say, your organization's database or stuff like that.						
P03	16:37:20	Okay, how? How am I going to assume that like like I'm about to enter like a a real number here. So yeah.						
P03	16:37:30	Okay, I'll I'll see. I'll just search on my.						
P03	16:37:34	Okay, yeah, yeah, like you can just like ask the model to do certain things and review. Yeah.						
P03	16:37:47	it's kind of like working with ChatGPT, I guess you can just assume that.						
P03	16:37:56	Okay.						
P03	16:38:11	So I'm asking GPT to... Um, guide me how to estimate a the money lost from fraud that's provided a single piece of... Consumer complaints.						
P03	16:38:40	And... Okay, I have no... I have zero... knowledge on how an LLM works. I'm just... Going back or things that the user do with ChatGPT.						
P03	16:39:00	So, he's guiding me... I clarifying the money lost.						
P03	16:39:14	and it's okay. It's it's trying to get me to...						
P03	16:39:22	might be each component to one, or a set of cost components, and.						
P03	16:39:29	Aggregate cross components.						
P03	16:39:44	on. I'm going to say like you to search.						
P03	16:39:53	Lion sample. A piece collection.						
P03	16:40:00	of Sumer... complaints on fraud.						
P03	16:40:39	Seems like it's searching online takes some time.						
P03	16:41:29	Uh... It's saying it's unable to... Locate an internal tables that contain individual consumer complaints narrative, but only aggregate FTC consumer.	not matching dataset		Y			
P03	16:41:45	Sentinel reports to give you a true sample collection of consumer complaints on product and crawl few publicly available contents page and pull text view.			Y			
P03	16:43:45	I'm gonna...						
P03	16:43:51	Search applied. It's online... Well, at the same time.	checked online					
P03	16:44:03	Please gather for me.						
P03	16:44:09	some public available... pages of company.						
P03	16:44:17	Compliance. Yeah.						
P03	16:44:43	You were... Road the report.						
P03	16:44:53	I have a database.						
P03	16:45:02	report database.						
P03	16:45:33	I don't see anything about probe reports... Oh, there's... Is that one of three categories.						
P03	16:45:46	I didn't have imposter scams. Okay, now we have a page here, which says... 26 million for the reports.						
P03	16:45:59	380... 3... 38% reported a loss.						
P03	16:46:06	And estimated... of 12.8 billion total fraud losses.						
P03	16:46:16	So that's from the Internet.						
P03	16:46:32	I... I would go with...						

P03	16:46:38	6 deliveries. It says a and has seen.						
P03	16:46:48	Edit, uh... 12 and a half 12 eighth.						
P03	16:46:54	Oh, I have lost. fraud.						
P03	16:46:58	I want to verify. Is that correct?						
P03	16:47:39	Cross all payment.						
P03	16:48:06	I was given this number... which is from the... page of.						
P03	16:48:17	which is from this page online. I'm not sure if it's accurate.						
P03	16:48:23	And it seems like they're all about this. A month, like, here's another page.						
P03	16:48:32	Okay, that's very fun. That's irrelevant.						
P03	16:48:46	There are some other comp plan pages that I should go over.						
P03	16:48:53	Um, just to verify things.						
P03	16:49:17	Copy scan. Oh, there's a bunch of things here.						
P03	16:49:24	So this website reports about... How much is that?						
P03	16:49:32	6... 50 thousands of scams theater and... Maybe I could have Gpture me the average last year, or just sample a few things here.						
P03	16:49:51	Okay, I've got some results here.						
P03	16:50:05	So it seems like the top 0.8 billion headline covers many more.						
P03	16:50:11	Lost them. And it describes.						
P03	16:50:17	Investment scams or. that are lost log elsewhere. Okay, that's not accurate. That's.						
P03	16:50:26	More stuff there.						
P03	16:50:35	Awesome data. And the BBBE website.						
P03	16:50:46	symbol.						
P03	16:50:53	Some complaints... and provide any... Orange... It's been lost.						
P03	16:52:03	So a question. Even if I've provided with an URL, it's still not able to gather all the information on that URL, right?			Y		Y	
P03	16:52:13	I mean, you can try. I'm not sure. Yeah, you can really try. Yeah. Okay, yeah, it's it's it's anything can happen.						
P03	16:52:23	All right. Okay, it seems like I have some result here, but...						
P03	16:52:33	Because it's not like we entirely like not allow it to access the Internet. It's like I blocked a feature we implemented to search table online. Okay, okay, I see. I see. That's why it's not responding. Okay.						
P03	16:52:50	All right, I'll just put this number there because it's sort of the model, what the model gives me. I.						
P03	16:52:58	Don't really find a way to access the the the table on this website. So I'm going to partially trust the model.						
P03	16:53:06	I'll give it a confidence score of two. How ready would you be to act on this result to make decision in your job?						
P03	16:53:18	Not until that I've verified this from the accurate data online.						
P03	16:53:26	Briefly describe how you arrive at this unit search.						
P03	16:53:31	I just... task normal.						
P03	16:53:36	2. Verify.						
P03	16:53:40	the answer. I got online.						
P03	16:53:46	Okay.						
P03	16:54:03	Actually, you know what? Let me just check if we can... Extra some data here.						
P03	16:54:16	Data Explore data.						
P03	16:54:36	appease just page. It's not like.						
P03	16:55:00	Okay, that's what I have.						
P03	16:55:12	provides some explanation.						
P03	16:55:23	Look at this slave. The page is somehow... Yeah, pirate.						
P03	16:55:34	Uh, I... Cannot trust.						
P03	16:55:40	Right, brunch. the models.						
P03	16:55:58	Provided... com.						

P03	16:56:13	Trust systems recommendation aren't necessarily.						
P03	16:56:21	Next.						
P03	16:56:29	Oh, really? What did you say? Not necessarily? I just didn't capture that. Yeah.						
P03	16:56:38	I just didn't hear that. What's the last question again? Sorry, I was just reading all the questions. Oh, yeah, yeah, it's like like there's a system affect me making decisions? Well, I feel like I'm the.						
P03	16:56:54	type of guy who's more confident on, you know, actually doing some sampling on data. Yeah, I see. And so there's, you know, from from data science, there's a way to, you know, measure how confident you should be with your data set like this.						
P03	16:57:10	professional to the square root of the data samples, right?						
P03	16:57:15	So I don't know that. I've been learning some senior. Yeah. Yeah. So so, you know, it's just the model gathering. So you'll probably say something trying to take someone else. Yeah, it's... just like you can continue. Yeah. Okay.						
P03	16:57:36	I think I would like to use the system frequently. I mean, if it has access online would be a very nice searching tool. I found a system all necessary complex.						
P03	16:57:53	Not... not really. Not really. It's pretty delightful to use. I thought the system was easy to use, somewhat agree.						
P03	16:58:05	I think I would need the support of technician person to use this system.						
P03	16:58:12	And then... I don't think so. I mean... I don't think there's like a lot of nitty peaky detail about data science that I should know before visiting this page. I found the various function system.						
P03	16:58:29	We're well integrated. maybe to be integrated. Like, I wish I would... actually have some tables, some database that I can access.						
P03	16:58:44	About there was too much inconsistency in the system. Have I?						
P03	16:58:51	Uh... I mean like like when I use the model, I just want it to be fast. So I, um... Read through things very quickly, I haven't caught any inconsistency here.						
P03	16:59:06	God, given that it's an AI model, inconsistency happens.						
P03	16:59:10	Everywhere, so... I'm neutral on that.						
P03	16:59:19	I would imagine that most people would learn to use this system very quickly.						
P03	16:59:37	Um... Okay, uh... Maybe, uh, I found system very... Cube or something.						
P03	16:59:49	To use, um... Not really.						
P03	16:59:53	I felt very confident using the system. I'm that kind of person who always like to verify things online. I don't really trust AI that much. I need to learn a lot of things before I could get going with this system.						
P03	17:00:11	No, no, there's I don't think I need to learn a lot.						
P03	17:00:17	Okay. Yeah, you don't have to log on. I can just do that. Oh, yeah. And like we probably would exceed those 30 minutes. Is that okay? Yeah, sorry. No, no, no, no, no, no, I'm sorry. Yeah, I have time. I'm like, I can do that all day. Thank you so much.						
P03	17:00:33	Yeah, I was I was. I actually like actually it's a longer time you took with me like I learn more things. Yeah.						
P03	17:00:41	your dental analysis data. Susan Department of Public Health.						
P03	17:00:48	The team monitors... vertical, yeah, the public swimming pitch you are investigating whether recent moon forces.						
P03	17:00:56	associated with higher contamination levels too often. decisions about when to increase monitoring or issue public weather.						
P03	17:01:09	Okay, it's asking for a relational analysis somehow using system examine freshwater beach exceedance rate and rainfall for from 2020 to 2023.						
P03	17:01:24	Um, do they show the same overall trend across the year?						
P03	17:01:33	any values are missing, replace them with the medium value for some must calculate from years, where the data is available.						
P03	17:01:45	Okay, um...						
P03	17:01:59	Gather...						
P03	17:02:06	fresh water.						
P03	17:02:17	Let's see. and values are missing, replace them with the medium.						
P03	17:02:26	Okay. If you receive a response, there's a sidebar that can be opened for view.						
P03	17:02:35	Follow this instructions to open.						
P03	17:02:54	Where is...						

P03	17:02:59	Oh, there's like a data thing here. Okay.						
P03	17:03:07	Review. Oh, yeah, yeah. Probably because I I have like 2 windows.						
P03	17:03:12	Otherwise, it will show on the side. Alright. So we're... But anyway, uh... Hmm.						
P03	17:03:32	Early testing...						
P03	17:03:39	Okay, a bunch of data here.						
P03	17:03:51	Alright.						
P03	17:04:04	There seems like some... It's not specifically labeled out.						
P03	17:04:18	Spell some ring data on some date.						
P03	17:04:25	What's the deal contacts me.						
P03	17:04:46	I guess I have to... It'll use a bit on this system.						
P03	17:05:25	I'll try to have it on the separate window, so... It may, uh... Maybe let me try to figure that out, because yeah.						
P03	17:05:39	Maybe we're just open.						
P03	17:05:48	Yeah, the nice thing. I guess I can close the original one. Yeah, yeah.						
P03	17:05:56	Alright. Uh... Mm-hmm.						
P03	17:06:03	We will... I'll retrieve tables.						
P03	17:06:07	Okay, it's the same...						
P03	17:06:21	Explain to me... What are all the tables?						
P03	17:06:28	Oh.						
P03	17:06:46	Yeah, and to open the sidebar, you have to click that. Okay. Okay.						
P03	17:07:02	table. So I can see that.						
P03	17:07:08	There's salmon, fresh water, and the rest. trend.						
P03	17:07:15	Swing together.						
P03	17:07:23	See? Um... Is there a trained?						
P03	17:07:45	Decreasing, uh... Ripple loves... Ross, his ears...						
P03	17:08:35	As a result.						
P03	17:09:44	Okay, here's the data. Uh... There's a strong increase in 2020.						
P03	17:09:55	An increase in 1092. Okay, there does not seem to be apparent to me as well.						
P03	17:10:06	And you split... This up... to a brand new.						
P03	17:10:17	30... and losses.						
P03	17:10:20	It's because, like, it's just yearly run data is not. It shouldn't be parent to them. There's.						
P03	17:10:27	little samples.						
P03	17:10:42	But in general, it is crossed the year, it seems like there's no pattern in that.						
P03	17:10:49	Or... actually, what's the question asking? Yeah, there's no overall trend.						
P03	17:11:05	Let me actually gather information here. So, like, whenever you run a new partner, sometimes they just data is getting remodeled. Yeah, yeah, you have to like, yeah, open it up after. Okay, I got it. I got it.						
P03	17:11:26	Can I say something about the system? Yeah, yeah, it's loading like like.						
P03	17:11:31	like like in the 1st task I I haven't seen any data. I assume.						
P03	17:11:36	There's probably a button somewhere that I have to click, but I don't know where it is. Oh, yeah. Yeah, that one, like, for the first test, actually, you are not supposed to say anything, but, like, yeah, there are probably something, and they're like, yeah, it's like... of except like the front end, everything else remains the same. Okay, okay. So is this? This is a system defined like designed for people who just.						
P03	17:12:02	work with a AI instead of actually visualizing data. Is it designed to be so?						
P03	17:12:08	I guess it is, like, the target user kind of can be like, oh, the like data workers, because it's like for the scenario, because, like, as I said, like you have access to your internal database. You can think like that. It's like have access to your organization's database.						
P03	17:12:25	So it's like, like, in reality, you could be like people need to like communicate with each other to find the data or something. Whereas, like.						
P03	17:12:36	Yeah, I guess like the target user could be like people more proficient in like.						
P03	17:12:43	in data science, but like trying to solve something like they think.						

P03	17:12:47	They want to use the system, or it could be like more lay users who doesn't know like I read that much, so they cannot write their own code. But like the system.						
P03	17:12:58	Yes, you kind of like look through this, like, you're kind of doing something for you, so you don't have to worry about that. I see. Yeah, yeah, or you can, yeah, it just, like, it depends on double-check your thing. A natural language.						
P03	17:13:11	version of SQL. Yeah, yeah, yeah, kind of. Or you can see like a chat GPT with, like, tabular data. Uh-huh. I see. That's nice.						
P03	17:13:22	Are we have something here. One. Okay. No, I'm a bit happy with this table because it's more sorted out.						
P03	17:13:35	I wish to see some diagrams here.						
P03	17:13:50	I can see that it seems to be generating some new table every time.						
P03	17:14:00	Analyze. This table.						
P03	17:14:04	Sponsolete table. And see if there is any pattern.						
P03	17:14:13	There.						
P03	17:14:23	There's definitely a pattern there, but. It does not seem to be an overall increasing or decreasing.						
P03	17:14:33	So, my answer should agree with it. Hello. Okay, how can... how confident are you? Systems answer?						
P03	17:14:45	Quite confident.						
P03	17:14:50	Maybe... Briefly describe how your referenced her.						
P03	17:14:56	Just, um, worrying... Your tables, and... Uh, tomorrow.						
P03	17:15:34	Okay, I'm a bit... or discrete. I'm a bit more agreed to that than last time.						
P03	17:15:45	Several feature... Quite useful, I see.						
P03	17:15:50	That's something really nice to have. Uh, table preview, um... I wish to see more like, um... charging feature on that.						
P03	17:16:07	And I'll use 4.						
P03	17:16:11	Oh, I don't know that that picture. I think it would be very useful.						
P03	17:16:17	table summary statistics. Not... not really that useful.						
P03	17:16:27	Um... SQL SQL query to produce new table name.						
P03	17:16:36	Um, yeah. That's useful.						
P03	17:16:40	Operation Diagram. That's useful.						
P03	17:16:46	I like it. Code explanations. Yeah, that's always nice column.						
P03	17:16:57	Dictionary...						
P03	17:17:04	That's nice. Start application, navigation is nice.						
P03	17:17:12	Uh... That may be a bit redundant.						
P03	17:17:17	For step description because it's if I want something more fine grained, I can.						
P03	17:17:23	just look into the details. Code editing.						
P03	17:17:30	I already know there's a feature like that, but that's useful.						
P03	17:17:36	on script execution. Yeah, of course.						
P03	17:17:45	Yes. I'd like to share my experience.						
P03	17:17:51	on... I feel like.						
P03	17:17:57	There are a bunch. Features.						
P03	17:18:01	I don't get it, yes. They're very nice.						
P03	17:18:10	I'd say, uh... Maybe a bit... Introduction on how to visual use of the.						
P03	17:18:24	visualization tools would be pretty nice.						
P03	17:18:32	Yeah. One more as you guys.						
P03	17:18:42	Um, no.						
P03	17:18:54	Hmm.						
P03	17:18:59	All right. issues.						
P03	17:19:07	Yeah. And there were too much.						
P03	17:19:15	Not so much, I would imagine that most people will learn to use the system very quickly. No, I think.						
P03	17:19:23	A guide would be very nice.						

P03	17:19:28	Tears.							
P03	17:19:35	I feel very confident using the system.							
P03	17:19:42	I'm generally not so confident with AI. No. Oh, really?							
P03	17:19:53	I'm not a pro AI user. So take my advice.							
P03	17:20:03	Careful. Probably with the bias. I mean, everyone with some bias.							
P03	17:20:13	All right. Yeah, I think that's it. Yeah, I I just like have maybe like one like 2 or 2 min, like follow up question. It's just like, yeah, like, I also noticed like you didn't use like all the features. So it's kind of like... Like, why you didn't notice them, like, at the first place? Were you just, like, why you didn't use other features? Like I.							
P03	17:20:34	First of all, I'm not a data analysis. If I do data analysis work, usually I'll imagine, you know, an Excel form or at least some form table. So.							
P03	17:20:48	you know. It might be useful for like, if I come in with an interface where you know there's some form here, or there's some chart there will drive me to think about it like it's actually a professional data analysis tool. Now, like, if you just.							
P03	17:21:06	If give me this cell. you know, without every parts here. Yeah. It's like you want things more like laying out. So you have a better idea of like what we are trying to show you here. Yeah, yeah, yeah.							
P03	17:21:22	Yeah. Yeah.							
P03	17:21:22	I see. Yeah, I guess the other thing was like.							
P03	17:21:29	Well, like... Like... Well, like, especially, like, for the first answer like you eventually chose to put in like the system answer like instead of like the one that you find online. Like, why that's the case?							
P03	17:21:44	Okay. Urls are hard. Yeah. because it it the system actually expands some, you know, reasoning about that like, why is that getting oversampled, or somehow.							
P03	17:22:00	And I agree with some of that. I don't have a good confidence in that, but I feel like the data on the official website is not that.							
P03	17:22:13	confidential to me as well. Um... So yeah, I I accept some of the reasons. Yeah, yeah, yeah. It says it's like it give you additional reasoning after you ask that 5.4. Yeah, yeah, I guess the other question is like like how did you determine like the final answer for.							
P03	17:22:32	The second question, like the false, because I think you ask an additional question, but you kind of like input answer before. Yeah, so so yeah, the idea is, like, the question is asking for, like, an overall train. Well, I was like at the time, I'm... I'm... trying to dig in more information from this, because that I.							
P03	17:22:52	I'm more interested, like, personally, into, like, what's the pattern looks like, rather than there's, like, overall pattern. But but, you know, from its answer, the 1st round, it seems like they're like overall, there's no pattern at all.							
P03	17:23:09	Like based on the sample table or based on what it's based on what it says, and I'm just trusting like like the the provides. Is that like a it give you a response saying there's no pattern?							
P03	17:23:24	Yeah. Okay. So it's like you saw like a response here saying there's no pattern, and then you kind of like trust it, and then you look at some sample table, and they seem it's like, you know, there's a difference between a pattern and overall pattern, right? The pattern could be.							
P03	17:23:40	Yeah, yeah, yeah, yeah, that's still a pattern. Yeah. Yeah, but an overall pattern is like something like that. So so it's... Like if this, if the overall pattern does not exist, I would.							
P03	17:23:54	you know, I I would agree that.							
P03	17:24:02	I'll agree what the machine says. So that is like, you know.							
P03	17:24:09	a fine grand pattern implies a overall pattern, but not the other way. Yeah, yeah, yeah. So when that is a false answer, I would trust it more rather than because it does not need to look into the details. But if it was so so it's like the the system tell you like.							
P03	17:24:30	for the yearly report, for the yearly trend, like the larger trend, there's no pattern. So you... find that idea.							
P03	17:24:39	Uh... I won't forget. Sorry, just.							
P03	17:24:46	I guess it just like the statement. I mean, like, what I guess, like what signal you receive from this, and then like your logic here.							
P03	17:24:57	fragrant truths implies coarse grand truths. Yeah.							
P03	17:25:05	Yeah, but yeah, yeah, yeah, I get that. It's like the it's like the false implies fine or false. Yeah, yeah, I got that. I guess it's just like what signal because like like you get this somewhere, right? Like what? What indicates that?							
P03	17:25:21	That's what I would say. Oh, it's it's it's just a bit up there like like.							

P03	17:25:27	Okay, we have the yearly reports there, which is very coarse grand. But yeah, I say. So you'll think like here, additional pattern. So then, like, there's no more fine grained out there. And then, yeah, I see, I see, I see. But like I I saw like you later also looking to like the more.						
P03	17:25:45	fine grind the like sample table. Yeah, I was just asking for my interest. Okay. okay. That's not, you know, what the problem is really asking. But yeah, no, no, I think that's like interesting. I guess the other thing was like you said, like the sample table only have like a few.						
P03	17:26:02	Like Rose. And there's a download feature. It's more like you didn't say it or like because it's my laptop or just curious, we're just like finishing the task, maybe not doing that much work. I'm just curious. Yeah.						
P03	17:26:18	Uh, yeah, yeah, I'm not, like, again, I'm not a digital narcissist. I don't even have Excel installed on my laptop. Oh, yeah, yeah. So you're kind of, like, trying to get more, like, signal information from. Yeah, yeah, I think that that's really helpful.						
P03	17:26:35	Uh-huh. There's not too much thing. I see, I see, yeah. I think that's good. Yeah, yeah, yeah. I think that's interesting. Yeah, I would just like going to save transcript and stop recording. Yeah, thank you so much for spending the time. Yeah, I'm actually, yeah.						
P04	16:34:14	All right. Okay, I'm given few tasks here in the test one says you will complete a total of 2 tasks using our system to export data and answer a set of questions.						
P04	16:34:27	And, okay, it should takes no more than 15 min, and you complete each task. Please explore data using system. Okay, submit your final answer rate confidence briefly explain how you arrive at your answer.						
P04	16:34:46	Okay. The information seems to find... Okay.						
P04	16:35:00	If the others is already logged in. So some importance for online version.						
P04	16:35:04	Oh, okay, I guess I can skip that. All right. Here's the question AI 1. So I am a data analysis at the.						
P04	16:35:16	Federal Trade Commission. Uh, so basically some... Some guy working with data.						
P04	16:35:25	Your team analyzes consumer fraud reports to the FTC portal which compels submitted by consumers across the US, and you are estimating the total amount of money lost to.						
P04	16:35:39	fraud to qualify the overall financial impact and lean for.						
P04	16:35:44	If enforcement properties. All right. This system determine the total amount of money lost to fraud across all company methods.						
P04	16:35:57	Uh... And I guess I'm just going to gather all the data from this.						
P04	16:36:03	Model. All right. please.						
P04	16:36:10	Tell me...						
P04	16:36:14	I was wondering if it's... you know, as simple as just accumulating all the.						
P04	16:36:22	amount of... lost in the fraud and there will be... some conditions on that. Maybe. But.						
P04	16:36:35	Tell me. for the the frog.						
P04	16:36:47	So I have a question here. So I'm assuming I'm given a bunch of data, or am I about to collect those data from this model, or so the the model have access to some data like it can also search online.						
P04	16:37:02	So yeah, so it's like, I guess the scenario is like, you know, the model potentially have access to the data relevant to this question. It's like just like.						
P04	16:37:11	broadly relevant to, or at least have access, maybe, say, your organization's database or stuff like that.						
P04	16:37:20	Okay, how? How am I going to assume that like like I'm about to enter like a a real number here. So yeah.						
P04	16:37:30	Okay, I'll I'll see. I'll just search on my.						
P04	16:37:34	Okay, yeah, yeah, like you can just like ask the model to do certain things and review. Yeah.						
P04	16:37:47	it's kind of like working with ChatGPT, I guess you can just assume that.						
P04	16:38:11	So I'm asking GPT to... Um, guide me how to estimate a the money lost from fraud that's provided a single piece of... Consumer complaints.						
P04	16:38:40	And... Okay, I have no... I have zero... knowledge on how an LLM works. I'm just... Going back or things that the user do with ChatGPT.						
P04	16:39:00	So, he's guiding me... I clarifying the money lost.						
P04	16:39:14	and it's okay. It's it's trying to get me to...						
P04	16:39:22	might be each component to one, or a set of cost components, and.						

P04	16:39:29	Aggregate cross components.						
P04	16:39:44	on. I'm going to say like you to search.						
P04	16:39:53	Lion sample. A piece collection.						
P04	16:40:00	of Sumer... complaints on fraud.						
P04	16:40:39	Seems like it's searching online takes some time.						
P04	16:41:29	Uh... It's saying it's unable to... Locate an internal tables that contain individual consumer complaints narrative, but only aggregate FTC consumer.						
P04	16:41:45	Sentinel reports to give you a true sample collection of consumer complaints on product and crawl few publicly available contents page and pull text view.						
P04	16:41:57	Uh, or if you already have a URL or No, I don't. I also just like, sorry, I just want to interrupt you a bit because I think I probably gave you a wrong information. It's like to a model like usually can search online. But like, because for the experiment purpose.						
P04	16:42:13	I just like it's like it have like access to like some benchmark data from government data to the open data. But I can also search online like eurally, but I disable that feature.						
P04	16:42:28	But like in that scenario, it would contain like information about some data relevant to like this scenario. So yeah, so that's why. So this is like a question outside of this.						
P04	16:42:43	Should I be somehow trick the model into, you know, giving me that information, or should I just speak?						
P04	16:42:49	I guess it is just like in the. In the latest citing is like you have access to some like like.						
P04	16:43:01	like like local data sets for like for sure, like.						
P04	16:43:07	That's kind of like the sighting. So if you keep adding online, if, like, that's what you're interested about, that's also fine. If you want to do that. Yeah. And also, like, you don't have to even like stuck in this interface like just like like if you're in that row, if you are confused about something.						
P04	16:43:25	Just like if you are in that role, like whatever you would want to do. But the only thing I want to, you know, is just like I probably give you the wrong information. The model cannot search online for now, because I disabled that feature. Okay. Yeah. Oh yeah.						
P04	16:43:45	I'm gonna...						
P04	16:43:51	Search applied. It's online... Well, at the same time.						
P04	16:44:03	Please gather for me.						
P04	16:44:09	some public available... pages of company.						
P04	16:44:17	Compliance. Yeah.						
P04	16:44:43	You were... Road the report.						
P04	16:44:53	I have a database.						
P04	16:45:02	report database.						
P04	16:45:33	I don't see anything about probe reports... Oh, there's... Is that one of three categories.						
P04	16:45:46	I didn't have imposter scams. Okay, now we have a page here, which says... 26 million for the reports.						
P04	16:45:59	380... 3... 38% reported a loss.						
P04	16:46:06	And estimated... of 12.8 billion total fraud losses.						
P04	16:46:16	So that's from the Internet.						
P04	16:46:32	I... I would go with...						
P04	16:46:38	6 deliveries. It says a and has seen.						
P04	16:46:48	Edit, uh... 12 and a half 12 eighth.						
P04	16:46:54	Oh, I have lost. fraud.						
P04	16:46:58	I want to verify. Is that correct?						
P04	16:47:39	Cross all payment.						
P04	16:48:06	I was given this number... which is from the... page of.						
P04	16:48:17	which is from this page online. I'm not sure if it's accurate.						
P04	16:48:23	And it seems like they're all about this. A month, like, here's another page.						
P04	16:48:32	Okay, that's very fun. That's irrelevant.						
P04	16:48:46	There are some other comp plan pages that I should go over.						
P04	16:48:53	Um, just to verify things.						
P04	16:49:17	Copy scan. Oh, there's a bunch of things here.						

P04	16:49:24	So this website reports about... How much is that?						
P04	16:49:32	6... 50 thousands of scams theater and... Maybe I could have Gpture me the average last year, or just sample a few things here.						
P04	16:49:51	Okay, I've got some results here.						
P04	16:50:05	So it seems like the top 0.8 billion headline covers many more.						
P04	16:50:11	Lost them. And it describes.						
P04	16:50:17	Investment scams or. that are lost log elsewhere. Okay, that's not accurate. That's.						
P04	16:50:26	More stuff there.						
P04	16:50:35	Awesome data. And the BBBE website.						
P04	16:50:46	symbol.						
P04	16:50:53	Some complaints... and provide any... Orange... It's been lost.						
P04	16:52:03	So a question. Even if I've provided with an URL, it's still not able to gather all the information on that URL, right?						
P04	16:52:13	I mean, you can try. I'm not sure. Yeah, you can really try. Yeah. Okay, yeah, it's it's anything can happen.						
P04	16:52:23	All right. Okay, it seems like I have some result here, but...						
P04	16:52:33	Because it's not like we entirely like not allow it to access the Internet. It's like I blocked a feature we implemented to search table online. Okay, okay, I see. I see. That's why it's not responding. Okay.						
P04	16:52:50	All right, I'll just put this number there because it's sort of the model, what the model gives me. I.						
P04	16:52:58	Don't really find a way to access the the the table on this website. So I'm going to partially trust the model.						
P04	16:53:06	I'll give it a confidence score of two. How ready would you be to act on this result to make decision in your job?						
P04	16:53:18	Not until that I've verified this from the accurate data online.						
P04	16:53:26	Briefly describe how you arrive at this unit search.						
P04	16:53:31	I just... task normal.						
P04	16:53:36	2. Verify.						
P04	16:53:40	the answer. I got online.						
P04	16:53:46	Okay.						
P04	16:54:03	Actually, you know what? Let me just check if we can... Extra some data here.						
P04	16:54:16	Data Explore data.						
P04	16:54:36	appease just page. It's not like.						
P04	16:55:00	Okay, that's what I have.						
P04	16:55:12	provides some explanation.						
P04	16:55:23	Look at this slave. The page is somehow... Yeah, pirate.						
P04	16:55:34	Uh, I... Cannot trust.						
P04	16:55:40	Right, brunch. the models.						
P04	16:55:58	Provided... com.						
P04	16:56:13	Trust systems recommendation aren't necessarily.						
P04	16:56:21	Next.						
P04	16:56:29	Oh, really? What did you say? Not necessarily? I just didn't capture that. Yeah.						
P04	16:56:38	I just didn't hear that. What's the last question again? Sorry, I was just reading all the questions. Oh, yeah, yeah, it's like like there's a system affect me making decisions? Well, I feel like I'm the.						
P04	16:56:54	type of guy who's more confident on, you know, actually doing some sampling on data. Yeah, I see. And so there's, you know, from from data science, there's a way to, you know, measure how confident you should be with your data set like this.						
P04	16:57:10	professional to the square root of the data samples, right?						
P04	16:57:15	So I don't know that. I've been learning some senior. Yeah. Yeah. So so, you know, it's just the model gathering. So you'll probably say something trying to take someone else. Yeah, it's... just like you can continue. Yeah. Okay.						
P04	16:57:36	I think I would like to use the system frequently. I mean, if it has access online would be a very nice searching tool. I found a system all necessary complex.						

P04	16:57:53	Not... not really. Not really. It's pretty delightful to use. I thought the system was easy to use, somewhat agree.						
P04	16:58:05	I think I would need the support of technician person to use this system.						
P04	16:58:12	And then... I don't think so. I mean... I don't think there's like a lot of nitty peaky detail about data science that I should know before visiting this page. I found the various function system.						
P04	16:58:29	We're well integrated. maybe to be integrated. Like, I wish I would... actually have some tables, some database that I can access.						
P04	16:58:44	About there was too much inconsistency in the system. Have I?						
P04	16:58:51	Uh... I mean like like when I use the model, I just want it to be fast. So I, um... Read through things very quickly, I haven't caught any inconsistency here.						
P04	16:59:06	God, given that it's an AI model, inconsistency happens.						
P04	16:59:10	Everywhere, so... I'm neutral on that.						
P04	16:59:19	I would imagine that most people would learn to use this system very quickly.						
P04	16:59:37	Um... Okay, uh... Maybe, uh, I found system very... Cube or something.						
P04	16:59:49	To use, um... Not really.						
P04	16:59:53	I felt very confident using the system. I'm that kind of person who always like to verify things online. I don't really trust AI that much. I need to learn a lot of things before I could get going with this system.						
P04	17:00:11	No, no, there's I don't think I need to learn a lot.						
P04	17:00:17	Okay. Yeah, you don't have to log on. I can just do that. Oh, yeah. And like we probably would exceed those 30 minutes. Is that okay? Yeah, sorry. No, no, no, no, no, no, I'm sorry. Yeah, I have time. I'm like, I can do that all day. Thank you so much.						
P04	17:00:33	Yeah, I was I was. I actually like actually it's a longer time you took with me like I learn more things. Yeah.						
P04	17:00:41	your dental analysis data. Susan Department of Public Health.						
P04	17:00:48	The team monitors... vertical, yeah, the public swimming pitch you are investigating whether recent moon forces.						
P04	17:00:56	associated with higher contamination levels too often. decisions about when to increase monitoring or issue public weather.						
P04	17:01:09	Okay, it's asking for a relational analysis somehow using system examine freshwater beach exceedance rate and rainfall for from 2020 to 2023.						
P04	17:01:24	Um, do they show the same overall trend across the year?						
P04	17:01:33	any values are missing, replace them with the medium value for some must calculate from years, where the data is available.						
P04	17:01:45	Okay, um...						
P04	17:01:59	Gather...						
P04	17:02:06	fresh water.						
P04	17:02:17	Let's see. and values are missing, replace them with the medium.						
P04	17:02:26	Okay. If you receive a response, there's a sidebar that can be opened for view.						
P04	17:02:35	Follow this instructions to open.						
P04	17:02:54	Where is...						
P04	17:02:59	Oh, there's like a data thing here. Okay.						
P04	17:03:07	Review. Oh, yeah, yeah. Probably because I I have like 2 windows.						
P04	17:03:12	Otherwise, it will show on the side. Alright. So we're... But anyway, uh... Hmm.						
P04	17:03:32	Early testing...						
P04	17:03:39	Okay, a bunch of data here.						
P04	17:03:51	Alright.						
P04	17:04:04	There seems like some... It's not specifically labeled out.						
P04	17:04:18	Spell some ring data on some date.						
P04	17:04:25	What's the deal contacts me.						
P04	17:04:46	I guess I have to... I'll use a bit on this system.						
P04	17:05:25	I'll try to have it on the separate window, so... It may, uh... Maybe let me try to figure that out, because yeah.						
P04	17:05:39	Maybe we're just open.						

P04	17:05:48	Yeah, the nice thing. I guess I can close the original one. Yeah, yeah.						
P04	17:05:56	Alright. Uh... Mm-hmm.						
P04	17:06:03	We will... I'll retrieve tables.						
P04	17:06:07	Okay, it's the same...						
P04	17:06:21	Explain to me... What are all the tables?						
P04	17:06:28	Oh.						
P04	17:06:46	Yeah, and to open the sidebar, you have to click that. Okay. Okay.						
P04	17:07:02	table. So I can see that.						
P04	17:07:08	There's salmon, fresh water, and the rest. trend.						
P04	17:07:15	Swing together.						
P04	17:07:23	See? Um... Is there a trained?						
P04	17:07:45	Decreasing, uh... Ripple loves... Ross, his ears...						
P04	17:08:35	As a result.						
P04	17:09:44	Okay, here's the data. Uh... There's a strong increase in 2020.						
P04	17:09:55	An increase in 1092. Okay, there does not seem to be apparent to me as well.						
P04	17:10:06	And you split... This up... to a brand new.						
P04	17:10:17	30... and losses.						
P04	17:10:20	It's because, like, it's just yearly run data is not. It shouldn't be parent to them. There's.						
P04	17:10:27	little samples.						
P04	17:10:42	But in general, it is crossed the year, it seems like there's no pattern in that.						
P04	17:10:49	Or... actually, what's the question asking? Yeah, there's no overall trend.						
P04	17:11:05	Let me actually gather information here. So, like, whenever you run a new partner, sometimes they just data is getting remodeled. Yeah, yeah, you have to like, yeah, open it up after. Okay, I got it. I got it.						
P04	17:11:26	Can I say something about the system? Yeah, yeah, it's loading like like.						
P04	17:11:31	like like in the 1st task I haven't seen any data. I assume.						
P04	17:11:36	There's probably a button somewhere that I have to click, but I don't know where it is. Oh, yeah. Yeah, that one, like, for the first test, actually, you are not supposed to say anything, but, like, yeah, there are probably something, and they're like, yeah, it's like... of except like the front end, everything else remains the same. Okay, okay. So is this? This is a system defined like designed for people who just.						
P04	17:12:02	work with a AI instead of actually visualizing data. Is it designed to be so?						
P04	17:12:08	I guess it is, like, the target user kind of can be like, oh, the like data workers, because it's like for the scenario, because, like, as I said, like you have access to your internal database. You can think like that. It's like have access to your organization's database.						
P04	17:12:25	So it's like, like, in reality, you could be like people need to like communicate with each other to find the data or something. Whereas, like.						
P04	17:12:36	Yeah, I guess like the target user could be like people more proficient in like.						
P04	17:12:43	in data science, but like trying to solve something like they think.						
P04	17:12:47	They want to use the system, or it could be like more lay users who doesn't know like I read that much, so they cannot write their own code. But like the system.						
P04	17:12:58	Yes, you kind of like look through this, like, you're kind of doing something for you, so you don't have to worry about that. I see. Yeah, yeah, or you can, yeah, it just, like, it depends on double-check your thing. A natural language.						
P04	17:13:11	version of SQL. Yeah, yeah, yeah, kind of. Or you can see like a chat GPT with, like, tabular data. Uh-huh. I see. That's nice.						
P04	17:13:22	Are we have something here. One. Okay. No, I'm a bit happy with this table because it's more sorted out.						
P04	17:13:35	I wish to see some diagrams here.						
P04	17:13:50	I can see that it seems to be generating some new table every time.						
P04	17:14:00	Analyze. This table.						
P04	17:14:04	Sponsolete table. And see if there is any pattern.						
P04	17:14:13	There.						

P04	17:14:23	There's definitely a pattern there, but. It does not seem to be an overall increasing or decreasing.						
P04	17:14:33	So, my answer should agree with it. Hello. Okay, how can... how confident are you? Systems answer?						
P04	17:14:45	Quite confident.						
P04	17:14:50	Maybe... Briefly describe how your referenced her.						
P04	17:14:56	Just, um, worrying... Your tables, and... Uh, tomorrow.						
P04	17:15:14	Alright, okay.						
P04	17:15:18	Uh...						
P04	17:15:34	Okay, I'm a bit... or discrete. I'm a bit more agreed to that than last time.						
P04	17:15:45	Several feature... Quite useful, I see.						
P04	17:15:50	That's something really nice to have. Uh, table preview, um... I wish to see more like, um... charging feature on that.						
P04	17:16:07	And I'll use 4.						
P04	17:16:11	Oh, I don't know that that picture. I think it would be very useful.						
P04	17:16:17	table summary statistics. Not... not really that useful.						
P04	17:16:27	Um... SQL SQL query to produce new table name.						
P04	17:16:36	Um, yeah. That's useful.						
P04	17:16:40	Operation Diagram. That's useful.						
P04	17:16:46	I like it. Code explanations. Yeah, that's always nice column.						
P04	17:16:57	Dictionary...						
P04	17:17:04	That's nice. Start application, navigation is nice.						
P04	17:17:12	Uh... That may be a bit redundant.						
P04	17:17:17	For step description because it's if I want something more fine grained, I can.						
P04	17:17:23	just look into the details. Code editing.						
P04	17:17:30	I already know there's a feature like that, but that's useful.						
P04	17:17:36	on script execution. Yeah, of course.						
P04	17:17:45	Yes. I'd like to share my experience.						
P04	17:17:51	on... I feel like.						
P04	17:17:57	There are a bunch. Features.						
P04	17:18:01	I don't get it, yes. They're very nice.						
P04	17:18:10	I'd say, uh... Maybe a bit... Introduction on how to visual use of the.						
P04	17:18:24	visualization tools would be pretty nice.						
P04	17:18:32	Yeah. One more as you guys.						
P04	17:18:42	Um, no.						
P04	17:18:54	Hmm.						
P04	17:18:59	All right. issues.						
P04	17:19:07	Yeah. And there were too much.						
P04	17:19:15	Not so much, I would imagine that most people will learn to use the system very quickly. No, I think.						
P04	17:19:23	A guide would be very nice.						
P04	17:19:28	Tears.						
P04	17:19:35	I feel very confident using the system.						
P04	17:19:42	I'm generally not so confident with AI. No. Oh, really?						
P04	17:19:53	I'm not a pro AI user. So take my advice.						
P04	17:20:03	Careful. Probably with the bias. I mean, everyone with some bias.						
P04	17:20:13	All right. Yeah, I think that's it. Yeah, I I just like have maybe like one like 2 or 2 min, like follow up question. It's just like, yeah, like, I also noticed like you didn't use like all the features. So it's kind of like... Like, why you didn't notice them, like, at the first place? Were you just, like, why you didn't use other features? Like I.						
P04	17:20:34	First of all, I'm not a data analysis. If I do data analysis work, usually I'll imagine, you know, an Excel form or at least some form table. So.						

P04	17:20:48	you know. It might be useful for like, if I come in with an interface where you know there's some form here, or there's some chart there will drive me to think about it like it's actually a professional data analysis tool. Now, like, if you just.						
P04	17:21:06	If give me this cell. you know, without every parts here. Yeah. It's like you want things more like laying out. So you have a better idea of like what we are trying to show you here. Yeah, yeah, yeah. Yeah. Yeah.						
P04	17:21:22	I see. Yeah, I guess the other thing was like.						
P04	17:21:29	Well, like... Like... Well, like, especially, like, for the first answer like you eventually chose to put in like the system answer like instead of like the one that you find online. Like, why that's the case?						
P04	17:21:44	Okay. Urls are hard. Yeah. because it it the system actually expands some, you know, reasoning about that like, why is that getting oversampled, or somehow.						
P04	17:22:00	And I agree with some of that. I don't have a good confidence in that, but I feel like the data on the official website is not that.						
P04	17:22:13	confidential to me as well. Um... So yeah, I I accept some of the reasons. Yeah, yeah, yeah. It says it's like it give you additional reasoning after you ask that 5.4. Yeah, yeah, I guess the other question is like like how did you determine like the final answer for.						
P04	17:22:32	The second question, like the false, because I think you ask an additional question, but you kind of like input answer before. Yeah, so so yeah, the idea is, like, the question is asking for, like, an overall train. Well, I was like at the time, I'm... I'm... trying to dig in more information from this, because that I.						
P04	17:22:52	I'm more interested, like, personally, into, like, what's the pattern looks like, rather than there's, like, overall pattern. But but, you know, from its answer, the 1st round, it seems like they're like overall, there's no pattern at all.						
P04	17:23:09	Like based on the sample table or based on what it's based on what it says, and I'm just trusting like like the the provides. Is that like a it give you a response saying there's no pattern?						
P04	17:23:24	Yeah. Okay. So it's like you saw like a response here saying there's no pattern, and then you kind of like trust it, and then you look at some sample table, and they seem it's like, you know, there's a difference between a pattern and overall pattern, right? The pattern could be.						
P04	17:23:40	Yeah, yeah, yeah, yeah, that's still a pattern. Yeah. Yeah, but an overall pattern is like something like that. So so it's... Like if this, if the overall pattern does not exist, I would.						
P04	17:23:54	you know, I I would agree that.						
P04	17:24:02	I'll agree what the machine says. So that is like, you know.						
P04	17:24:09	a fine grand pattern implies a overall pattern, but not the other way. Yeah, yeah, yeah. So when that is a false answer, I would trust it more rather than because it does not need to look into the details. But if it was so so it's like the the system tell you like.						
P04	17:24:30	for the yearly report, for the yearly trend, like the larger trend, there's no pattern. So you... find that idea.						
P04	17:24:39	Uh... I won't forget. Sorry, just.						
P04	17:24:46	I guess it just like the statement. I mean, like, what I guess, like what signal you receive from this, and then like your logic here.						
P04	17:24:57	fragrant truths implies coarse grand truths. Yeah.						
P04	17:25:05	Yeah, but yeah, yeah, yeah, I get that. It's like the it's like the false implies fine or false. Yeah, yeah, I got that. I guess it's just like what signal because like like you get this somewhere, right? Like what? What indicates that?						
P04	17:25:21	That's what I would say. Oh, it's it's it's just a bit up there like like.						
P04	17:25:27	Okay, we have the yearly reports there, which is very coarse grand. But yeah, I say. So you'll think like here, additional pattern. So then, like, there's no more fine grained out there. And then, yeah, I see, I see, I see. But like I I saw like you later also looking to like the more.						
P04	17:25:45	fine grind the like sample table. Yeah, I was just asking for my interest. Okay, okay. That's not, you know, what the problem is really asking. But yeah, no, no, I think that's like interesting. I guess the other thing was like you said, like the sample table only have like a few.						
P04	17:26:02	Like Rose. And there's a download feature. It's more like you didn't say it or like because it's my laptop or just curious, we're just like finishing the task, maybe not doing that much work. I'm just curious. Yeah.						
P04	17:26:18	Uh, yeah, yeah, I'm not, like, again, I'm not a digital narcissist. I don't even have Excel installed on my laptop. Oh, yeah, yeah. So you're kind of, like, trying to get more, like, signal information from. Yeah, yeah, I think that that's really helpful.						
P04	17:26:35	Uh-huh. There's not too much thing. I see, I see, yeah. I think that's good. Yeah, yeah, yeah. I think that's interesting. Yeah, I would just like going to save transcript and stop recording. Yeah, thank you so much for spending the time. Yeah, I'm actually, yeah.						

P05	10:32:59	Regenerate, view hide stats... cool, there it is, view hide stats, identifying the regular data. Oh, this is really slick, and there's a little checkmark, nice front end! And then you check through them, okay.						
P05	10:33:10	So, um... Number of frauds... All right, I'm just going to copy this... That's what we're asking for, and in front of it I will say is. Uh, let's take the quotes off because I don't know what LLMs do with these things sometimes.						
P05	10:34:18	I like that. It's kind of like a loading bar as it's telling me the action as it kind of just pulses. I do wonder, though, if it's actually telling me what it's doing, or if it's bullshitting me, you know, like, there's a whole body of research in HCI about how when you had, um, installation bars, when we back when we used to install software.						
P05	10:34:36	That it's better to have the installation bar, um, decoupled from how quickly a process is going, because the humans... like, if it's T0 to TN, the humans would rather be kind of a linear ramp, because that makes them feel better.						
P05	10:34:51	Um, instead of, like, it goes really quickly for one period, and then it's like a really intense write period, and then it, like, lags somewhere for a while. Even if the same delta is N, uh, it upsets human beings. So I wonder, is it bullshitting me, or is it, um, actually doing what it's saying it's doing of step 3?						
P05	10:35:15	I don't know what a materializer is. I'd like to know. It says executing action materializer						
P05	10:35:27	I wonder, Open Web UI, I wonder if this is something you guys co-opted. Alright. Processing done in 100 seconds. It's nice it told me how long it was. It felt like an eternity, though, even though it was only 100 seconds.						
P05	10:35:40	Yes, the two available 2020 datasets that report fraud and other incidents for the Miami-Fort Lauderdale, West Palm Beach metropolitan area are in full agreement. Florida-only table 17,000 reports, nationwide table, 17,000 reports, different, 0%. It indicates the records are perfectly consistent between all the sources.						
P05	10:35:58	Same check for identity theft counts and other metro areas. Great, so now I know that these are the same. Problem is I don't believe it for because LLMs are terrible at, um... Well, they're better at math than they used to be, but they're still not great at it. Um, and it would make me feel more comfortable if I knew that the difference calculation was done using code and not using just token generation. Same thing with pulling those two numbers, but let's look. Look, viewHideState. Oh, good, here it is, identifying relevant data.						
P05	10:36:29	it looks identifying 22 tables. I can view all the tables, but I don't care.						
P05	10:36:34	I'll view them. Wow, look at all those tables, text, text, text. This is really slick. Description, these datasets are here. Cool, sources, and that's where they go. Do you guys grab these from the internet? Shit, that's crazy. Okay.						
P05	10:37:07	And Operation2 ID legal, this table are these two different tables? They are, but one is, I don't know, they look a little different because one has like quotes and one doesn't, but that's fine.						
P05	10:37:18	But also, I need to see what the columns are in these, I don't know, I can't believe anything it says. Ah, here it is. Metropolitan, number of reports. Can I see it?						
P05	10:37:51	Alright, I'm convinced enough that these are the correct things. I think it'd be a little easier. This was a little hard for me to navigate through, because I just wanted to see the relevant tables. The top 2 relevant tables, but it's given me 22 tables, and I'd like a panel in between where I can just see the two tables that are most relevant.						
P05		Or, select which tables, because I don't want to flip through all 22 tables, that seems very annoying.						
P05	10:38:27	Because I'm not a database person, I don't think this is supposed to be, um... SQL, doesn't look like SQL to me. In fact, it honestly looks kind of like pandas, but I've never done the end quotes in Pandas like that. I'm not even sure you can do that in Pandas.						
P05		I'm not quite sure if that's, like, an error or if that's actually the code that ran. And more importantly. I don't know what the tables variable is.						
P05	10:39:03	I'll take it on faith that Tables has something that has all these. And actually, I suppose I don't really need to know what tables is, because this is the... this is the key line, and it is good you guys give me the key line. I'd rather have this than, like, the whole file, where it's like.... and this is where we downloaded the tables, and this is what's going on.						
P05	10:39:19	I'll just take it on faith that the tables are the tables, but it would have been nice to have a line being like, this is what the tables variable is, even in, like, plain text, you know?						
P05	10:39:27	Target table and scripts. It created target table. Aha, a Python script to do the results. So if I click on target table, there it is number of reports, number of reports, metropolitan area. So it's merged across that.						
P05	10:39:43	it's different areas. What am I looking at here? Those are different areas, but I want to know Miami-Fort Lauderdale, so if we go back up, the two that are relevant is the Metropolitan area for Fort Lauderdale, and... Sorry, no, which ones are the two that are relevant? I've lost it in this first tab. That's sources, this is description.						

P05	10:40:07	That's View All Retreat. Oh, there it is, I was dumb. Instead of clicking View All Retrieved tables, here it is, I can just click on the two tables that are needed. Ah, so 2024 CSN, this is exactly what I wanted, except for, once again.						
P05	10:41:18	Yeah, okay, so... it lied. Because what I'm looking at here is for num reports and reports per 100K population, which is my understanding, the two different... Um, yeah. My understanding is that's the two different, um... tables, because I'm looking at the script, which is telling me what's going on there. Ooh, I'd love to click this Explain Code button.						
P05	10:41:55	It says annotating, but I don't care. The answer is, it's a fucking lied, pardon my language, because, um... right, yeah, okay, good. The get forward a table, keep two columns. The explanation is good, and I like how it's highlighting metropolitan area below.						
P05	10:42:11	And number of reports here, and presumably if I do this, Ilhammer, that's... let me tell you, this interface makes it really easy for me to follow what's going on if I had less coding ability. I will, however, say, this is some bullshit, because, um, for Miami-Fort Lauderdale, it's 171 for number reports, and then it's 2... 793 for reports per 100K, and that's wrong. And while it was nice to do this whole chain of reasoning, it would have been smart for me to skip straight to target table and data to view the actual table to make sure it's correct, and if it is correct, then I don't have to do all this other work to see what's going on, you know?						
P05		Let's generate the final answer. All right. Yeah, I have no idea how it finds this. I have no idea how you grab these. Let's execute the scripts.						
P05		Um, because it says Florida Reports is a CSN reports is this, unless I'm misunderstanding your table here, I have no idea where the it pulled 17.1462 for CSM.						
P05	10:43:16	My answer is true. No, my answer is false. The system's answer is true. How confident are you that the system's answer is correct? Not confident at all.						
P05	10:43:26	how ready would you be to act on this result if the decision was your job? Not ready at all. I'd have to do it myself because of the inconsistency.						
P05		How'd I respond to my answer? I followed the steps in the sidebar and did a trace. From table selection. to actual... values in... I don't know, intermediate table. I saw... that in intermediate table the numbers were different.						
P05	10:44:08	If I cared more, I would actually open up the the national table and make sure that the number is actually 2... hold on. It's per 100,000. Um... let's double check this. I'm pretty sure I'm right, but I would like uh oh, I just busted it.						
P05	10:44:47	But where's the... that's the column dictionary, where's the... there it is. Number of reports. It's right, no, I'm right, because number of reports per 100K is 21793, number of reports overall. It would be nice if they were normalized, it's kind of throwing me off, but even if it was normalized, it'd be the same numbers just with different decimal points. So no, it's totally wrong.						
P05	10:45:05	Um, as I was saying, I would, if I cared a little more, I would look at the per 100K table just to make sure that's correct, and what the let's look just for a second.						
P05		Huh. Oh. No, that's the metropolitan area one. That's correct, 171462, so we go back with the state MSA table.						
P05		I want to see more rows, so I'll have to download. And open it. Is it okay if I open this? Okay. Uh, the transcript is in my way. Let's move it out of the way. Alright, number of reports... I'm looking for... Palm Beach, what am I looking for? I forgot. Miami-fort Lauderdale, I think. No, it says 171462 on this one as well. Okay, so now I'm confused, because the tables are right, but I guess it... its ability to get in the table was wrong.						
P05	10:46:05	Um... Hmm... it would have been more helpful if I knew which tables it was pulling from, because what's going on with this table? I thought what was going on here. Maybe I don't understand what's going on at all. Let's go back						
P05		Preparing the data, yeah, you grab that, I get it. So, into table, target fraud, the columns are metropolitan number reports, the columns of this other table are metropolitan area, number ports per 100,000 population. So I guess they're grabbing the wrong value from... Table 2, but even if it was the right value from Table 2, this doesn't make sense to me. This is 2024 CSN Metropolitan Areas Fraud.						
P05		Which the state one is this one, which means, if I go back... This one... Ah, okay, no, so the numbers are the same, it's just the the work products because number of reports and the same is the same. It just pulled the wrong value, and I should have caught that before.						
P05	10:47:03	I just assumed that the normalization would have done something there. So... I... need to change my answer. My answer is true. The system's answer is... True. How confident am I in the system's answer? No. How about I would be ready to act on this? Yes, but it's because I did all the work. Um...						

P05		I then went back to step one. and did the task myself. This has shattered. Any faith I have. Thank you. Yeah, of course, right answer. But wrong showing work makes me... wary. to trust it at all. If I have to deeply check every. Snap. then it's not worth using the Llm.						
P05	13:47:24	I do that. I do, I do. All right. Let's make it happen. It's like, yeah, that's where you lived. Yes, it was. So we'll go to the next page. And this is it while you got it all set up. Yeah. All right, let's do it. Okay. Shall we?						
P05	13:47:38	Sidebar feature evaluation, data set context. Is this useful or not useful? I think this is extremely useful. I really like that.						
P05	13:47:48	Table preview, I think it was... moderately useful, because I wanted to be able to filter down on which rows I wanted. It was overwhelming how many rows there was. Uh, table relevance feedback, edit relevant tables. Oh my god, this is what I was looking for, I didn't see it, but it's extremely useful. I probably... I wish I was looking closer for it.						
P05	13:48:09	Summary statistics... I think the summary statistics are useful, but that's assuming that I can trust them. I don't trust the system right now since it produced the wrong answer and it showed its work. All right. Operation steps description executes an SQL query to produce a new table named water samples.						
P05	13:48:24	From the following tables, environment, waterbody, and this at all.						
P05	13:48:30	Uh... Oh, saying what the operation is. Okay, I understand. And the answer is extremely useful, because I know what's happening. Operation diagram, extremely useful. Code snippet, also extremely useful, because if I want to check its work. Again, if that is the code it ran. Um...						
P05	13:48:46	Code explanation, I thought was fantastic. I loved how it highlighted stuff. It was easy for me to follow and easy to explain stuff.						
P05	13:48:53	Um, column dictionary was good. Um, I didn't see the column dictionary, but if I saw it, it would have been really helpful. Step navigation, I loved. Step description, I also thought was extremely useful. Code editing. I did not edit the code, but I love this, that you can edit and execute the code, and you can download it. This is fantastic.						
P05	13:49:12	Um, and then script execution, that the execution was successful and it can do stuff very useful. Um, and the fact that the files... you have a typo right here, not AY all useful, but that's fine. Um, extremely helpful. Um... Getting the wrong...						
P05	13:49:31	Answer in the sidebar. was bad for my faith in the system.						
P05	13:49:39	However... the sidebar of affordances were fantastic.						
P05	13:49:49	and exactly what I would want out of a system.						
P05	13:49:55	Next. I think I use this where I would. Actually, I'm going to give it a four because again, I don't trust it. Is it unnecessarily complex? No. Was it easy to use? Yes. Uh, I would not need a technical person. The functions were well integrated. There was not too much consistency. I think people would use it very quickly. Do I find it cumbersome?						
P05	13:50:19	I'm gonna give it a neutral. I'm not sure if it's cumbersome, if I'm just new to it, there's, like, a lot of moving parts, you know? I felt confident using the system. I did not need to learn anything before using it.						
P05	13:50:32	Task 2. Alright, switch me to a new model. Just log in. Yeah, just log in with something else.						
P05	13:50:44	And yeah, I think that's it. That's the the last task. Let's do it. I am a data analyst for the Master Peters Department of Health. Your team monitors water quality of public spilling beaches. You're examining changes over time.						
P05	13:51:00	Using the system to determine how many beaches had a higher bacterial rate in 2013 than 2013. Okay.						
P05	13:51:07	So I'm just going to copy and paste this right here.						
P05	13:51:11	I'm going to go open web UI. I'm going to put this in. I should note for the record, although I know how to write a SQL query, off the top of my head, I don't know exactly how to do this without the LLM. I mean, in five minutes, I would, but what's really helpful here is, like, I'm not like, oh, I know how I'm going to do this, right?						
P05	13:51:27	Um, so having the LLM do this for me is nice, because I don't have to do any thinking. Like, if I knew nothing, this would be nice.						
P05	13:51:33	Again, I like the, uh, telling me what it's doing.						
P05	13:51:38	Uh, but I'm not sure... you know what, my prompt is wrong, because I didn't tell it the right number of which beaches. So, um... I'm gonna say user role. I'm gonna copy in the user role as well, because I know something about large language models, and that they do better with more tightly defined prompts and information like this. No, stop, stop, stop, stop, stop. Okay.						
P05	13:52:00	We'll try it this way. There we go. I'm going to click send.						
P05	13:52:08	All right. Now let's think.						
P05	13:52:59	I'm just waiting for it to do its thing.						

P05	13:53:16	All right, using the water records... 276 beaches recorded a higher in 2013 and 2012.						
P05	13:53:24	Yes. Something wrong? I don't know why it shows up. Is it this one right here? How do I close it? Is that right there? Thank you. I just didn't see that. Okay. Vision doesn't have this one. Gotcha. So no sidebar here. This is just, this is what it is. Using the water testing records.						
P05	13:53:41	Here are the beaches recorded in 2013 and 2012, counting only beaches that had one sample collected in both years. Sample exceedance on the violation frag was true. Okay.						
P05	13:53:53	I'm not allowed to look at the sidebar. Yeah, like after you close it, you have no way to get it back. Oh, my God. So all I know, I can only take it on faith.						
P05	13:54:02	Is what you're saying. It's like, there's no way for me to check it to work, it's just telling me what it is. like the interaction is chat only. Okay, I see. All right. So show me. I'm gonna say, can you walk me through how you got this answer?						
P05	13:54:07	It's thinking.						
P05	13:54:45	Uh, here's this type of set process I used to arrive at the figure of 276 beaches.						
P05	13:54:50	Mm-hmm. Alright, it's telling me the tables. I have to take it on faith that the tables are the correct tables, uh, unless you told me the tables. You didn't, but the tables' names are at least sensible, so fine. I don't love taking that unfaith without physically viewing the table myself, but I'll do it.						
P05	13:55:08	They explain what the table is, and there's a field where it says true if it's too much. Combine the two years, yep, yep, union all the two tables, that makes sense.						
P05	13:55:21	I counted exceed count, it's true, total number, and then there's a rate.						
P05	13:55:27	Okay? Why do we want to rate?						
P05	13:55:33	Right? We drop them... Great. So, step 3 seems like unuseful, because in step 3, it's calculating a percentage, but I don't need that. All I want is step 6, which is the final beaches that meet the criteria, and where the rate 2013 is greater than rate 12.						
P05	13:55:53	And then that's the number. Mm-hmm. That's fine. I want to see... the head of each table.						
P05	13:56:06	Will it show me that? Let's find out. Anyway, while it's doing that, my answer is 267. Is that the right answer? What'd they say? Yes, 267.						
P05	13:56:18	And the system's answer is also 267. I'm not going to do it myself. That seems like a lot of work. How confident am I in the system being correct? I am 4. How ready would I be able to react on this? Probably 3.						
P05	13:56:35	I asked the LLM. You show its work.						
P05	13:56:40	And the steps. are what I would do.						
P05	13:56:48	I did not get a chance to see the underlying... computation.						
P05	13:56:56	And without the sidebar. It is too much friction.						
P05	13:57:03	or me to... Check its work.						
P05	13:57:09	Step by step. Uh-huh, so that's what it looks like. Uh-huh.						
P05	13:57:17	False. Yeah, I just, I believe it. That's fine. Do I trust the system's recommendation? I give it a four.						
P05	13:57:24	Next. Uh, no, I would use this system less frequently. I like at least the illusion of being able to trust work.						
P05	13:57:31	Unnecessarily complex, obviously wrong, is easy to use. Yes. No, I would not need the support of a technical person. Various functions were all integrated, sure. To mention consistency? No.						
P05	13:57:43	These are easily cumbersome to use. No. Confident using the system? No, not at all. Uh... you know... I dislike taking things on.						
P05	13:57:58	From an LLM. Unless I can run a unit test.						
P05	13:58:13	via an actual language. And actual, you know, interpreter compiler.						
P05	13:58:21	interpreter and not... Just next.						
P05	13:58:27	Token prediction.						
P05	10:41:18	Yeah, okay, so... it lied. Because what I'm looking at here is for num reports and reports per 100K population, which is my understanding, the two different... Um, yeah. My understanding is that's the two different, um... tables, because I'm looking at the script, which is telling me what's going on there. Ooh, I'd love to click this Explain Code button.						
P05	10:41:55	It says annotating, but I don't care. The answer is, it's a fucking lied, pardon my language, because, um... right, yeah, okay, good. The get forward a table, keep two columns. The explanation is good, and I like how it's highlighting metropolitan area below.						

P05	10:42:11	And number of reports here, and presumably if I do this, Ilhammer, that's... let me tell you, this interface makes it really easy for me to follow what's going on if I had less coding ability. I will, however, say, this is some bullshit, because, um, for Miami-Fort Lauderdale, it's 171 for number reports, and then it's 2... 793 for reports per 100K, and that's wrong. And while it was nice to do this whole chain of reasoning, it would have been smart for me to skip straight to target table and data to view the actual table to make sure it's correct, and if it is correct, then I don't have to do all this other work to see what's going on, you know?						
P05		Let's generate the final answer. All right. Yeah, I have no idea how it finds this. I have no idea how you grab these. Let's execute the scripts.						
P05		Um, because it says Florida Reports is a CSN reports is this, unless I'm misunderstanding your table here, I have no idea where the it pulled 17.1462 for CSM.						
P05	10:43:16	My answer is true. No, my answer is false. The system's answer is true. How confident are you that the system's answer is correct? Not confident at all.						
P05	10:43:26	how ready would you be to act on this result if the decision was your job? Not ready at all. I'd have to do it myself because of the inconsistency.						
P05		How'd I respond to my answer? I followed the steps in the sidebar and did a trace. From table selection. to actual... values in... I don't know, intermediate table. I saw... that in intermediate table the numbers were different.						
P05	10:44:08	If I cared more, I would actually open up the the national table and make sure that the number is actually 2... hold on. It's per 100,000. Um... let's double check this. I'm pretty sure I'm right, but I would like uh oh, I just busted it.						
P05	10:44:47	But where's the... that's the column dictionary, where's the... there it is. Number of reports. It's right, no, I'm right, because number of reports per 100K is 21793, number of reports overall. It would be nice if they were normalized, it's kind of throwing me off, but even if it was normalized, it'd be the same numbers just with different decimal points. So no, it's totally wrong.						
P05	10:45:05	Um, as I was saying, I would, if I cared a little more, I would look at the per 100K table just to make sure that's correct, and what the let's look just for a second.						
P05		Huh. Oh. No, that's the metropolitan area one. That's correct, 171462, so we go back with the state MSA table.						
P05		I want to see more rows, so I'll have to download. And open it. Is it okay if I open this? Okay. Uh, the transcript is in my way. Let's move it out of the way. Alright, number of reports... I'm looking for... Palm Beach, what am I looking for? I forgot, Miami-fort Lauderdale, I think. No, it says 171462 on this one as well. Okay, so now I'm confused, because the tables are right, but I guess it... its ability to get in the table was wrong.						
P05	10:46:05	Um... Hmm... it would have been more helpful if I knew which tables it was pulling from, because what's going on with this table? I thought what was going on here. Maybe I don't understand what's going on at all. Let's go back						
P05		Preparing the data, yeah, you grab that, I get it. So, into table, target fraud, the columns are metropolitan number reports, the columns of this other table are metropolitan area, number ports per 100,000 population. So I guess they're grabbing the wrong value from... Table 2, but even if it was the right value from Table 2, this doesn't make sense to me. This is 2024 CSN Metropolitan Areas Fraud.						
P05		Which the state one is this one, which means, if I go back... This one... Ah, okay, no, so the numbers are the same, it's just the the the work products because number of reports and the same is the same. It just pulled the wrong value, and I should have caught that before.						
P05	10:47:03	I just assumed that the normalization would have done something there. So... I... need to change my answer. My answer is true. The system's answer is... True. How confident am I in the system's answer? No. How about I would be ready to act on this? Yes, but it's because I did all the work. Um...						
P05		I then went back to step one. and did the task myself. This has shattered. Any faith I have. Thank you. Yeah, of course, right answer. But wrong showing work makes me... wary. to trust it at all. If I have to deeply check every. Snap. then it's not worth using the Llm.						
P05	13:47:24	I do that. I do, I do. All right. Let's make it happen. It's like, yeah, that's where you lived. Yes, it was. So we'll go to the next page. And this is it while you got it all set up. Yeah. All right, let's do it. Okay. Shall we?						
P05	13:47:38	Sidebar feature evaluation, data set context. Is this useful or not useful? I think this is extremely useful. I really like that.						
P05	13:47:48	Table preview, I think it was... moderately useful, because I wanted to be able to filter down on which rows I wanted. It was overwhelming how many rows there was. Uh, table relevance feedback, edit relevant tables. Oh my god, this is what I was looking for, I didn't see it, but it's extremely useful. I probably... I wish I was looking closer for it.						

P05	13:48:09	Summary statistics... I think the summary statistics are useful, but that's assuming that I can trust them. I don't trust the system right now since it produced the wrong answer and it showed its work. All right. Operation steps description executes an SQL query to produce a new table named water samples.						
P05	13:48:24	From the following tables, environment, waterbody, and this at all.						
P05	13:48:30	Uh... Oh, saying what the operation is. Okay, I understand. And the answer is extremely useful, because I know what's happening. Operation diagram, extremely useful. Code snippet, also extremely useful, because if I want to check its work. Again, if that is the code it ran. Um...						
P05	13:48:46	Code explanation, I thought was fantastic. I loved how it highlighted stuff. It was easy for me to follow and easy to explain stuff.						
P05	13:48:53	Um, column dictionary was good. Um, I didn't see the column dictionary, but if I saw it, it would have been really helpful. Step navigation, I loved. Step description, I also thought was extremely useful. Code editing, I did not edit the code, but I love this, that you can edit and execute the code, and you can download it. This is fantastic.						
P05	13:49:12	Um, and then script execution, that the execution was successful and it can do stuff very useful. Um, and the fact that the files... you have a typo right here, not AY all useful, but that's fine. Um, extremely helpful. Um... Getting the wrong...						
P05	13:49:31	Answer in the sidebar. was bad for my faith in the system.						
P05	13:49:39	However... the sidebar of affordances were fantastic.						
P05	13:49:49	and exactly what I would want out of a system.						
P05	13:49:55	Next. I think I use this where I would. Actually, I'm going to give it a four because again, I don't trust it. Is it unnecessarily complex? No. Was it easy to use? Yes. Uh, I would not need a technical person. The functions were well integrated. There was not too much consistency. I think people would use it very quickly. Do I find it cumbersome?						
P05	13:50:19	I'm gonna give it a neutral. I'm not sure if it's cumbersome, if I'm just new to it, there's, like, a lot of moving parts, you know? I felt confident using the system. I did not need to learn anything before using it.						
P05	13:50:32	Task 2. Alright, switch me to a new model. Just log in. Yeah, just log in with something else.						
P05	13:50:44	And yeah, I think that's it. That's the the last task. Let's do it. I am a data analyst for the Master Peters Department of Health. Your team monitors water quality of public spilling beaches. You're examining changes over time.						
P05	13:51:00	Using the system to determine how many beaches had a higher bacterial rate in 2013 than 2013. Okay.						
P05	13:51:07	So I'm just going to copy and paste this right here.						
P05	13:51:11	I'm going to go open web UI. I'm going to put this in. I should note for the record, although I know how to write a SQL query, off the top of my head, I don't know exactly how to do this without the LLM. I mean, in five minutes, I would, but what's really helpful here is, like, I'm not like, oh, I know how I'm going to do this, right?						
P05	13:51:27	Um, so having the LLM do this for me is nice, because I don't have to do any thinking. Like, if I knew nothing, this would be nice.						
P05	13:51:33	Again, I like the, uh, telling me what it's doing.						
P05	13:51:38	Uh, but I'm not sure... you know what, my prompt is wrong, because I didn't tell it the right number of which beaches. So, um... I'm gonna say user role. I'm gonna copy in the user role as well, because I know something about large language models, and that they do better with more tightly defined prompts and information like this. No, stop, stop, stop, stop, stop. Okay.						
P05	13:52:00	We'll try it this way. There we go. I'm going to click send.						
P05	13:52:08	All right. Now let's think.						
P05	13:52:59	I'm just waiting for it to do its thing.						
P05	13:53:16	All right, using the water records... 276 beaches recorded a higher in 2013 and 2012.						
P05	13:53:24	Yes. Something wrong? I don't know why it shows up. Is it this one right here? How do I close it? Is that right here? Thank you. I just didn't see that. Okay. Vision doesn't have this one. Gotcha. So no sidebar here. This is just, this is what it is. Using the water testing records.						
P05	13:53:41	Here are the beaches recorded in 2013 and 2012, counting only beaches that had one sample collected in both years. Sample exceedance on the violation frag was true. Okay.						
P05	13:53:53	I'm not allowed to look at the sidebar. Yeah, like after you close it, you have no way to get it back. Oh, my God. So all I know, I can only take it on faith.						
P05	13:54:02	Is what you're saying. It's like, there's no way for me to check it to work, it's just telling me what it is.						
P05	13:54:07	like the interaction is chat only. Okay, I see. All right. So show me. I'm gonna say, can you walk me through how you got this answer?						

P05	13:54:21	It's thinking.						
P05	13:54:45	Uh, here's this type of set process I used to arrive at the figure of 276 beaches.						
P05	13:54:50	Mm-hmm. Alright, it's telling me the tables. I have to take it on faith that the tables are the correct tables, uh, unless you told me the tables. You didn't, but the tables' names are at least sensible, so fine. I don't love taking that unfaith without physically viewing the table myself, but I'll do it.						
P05	13:55:08	They explain what the table is, and there's a field where it says true if it's too much. Combine the two years, yep, yep, union all the two tables, that makes sense.						
P05	13:55:21	I counted exceed count, it's true, total number, and then there's a rate.						
P05	13:55:27	Okay? Why do we want to rate?						
P05	13:55:33	Right? We drop them... Great. So, step 3 seems like unuseful, because in step 3, it's calculating a percentage, but I don't need that. All I want is step 6, which is the final beaches that meet the criteria, and where the rate 2013 is greater than rate 12.						
P05	13:55:53	And then that's the number. Mm-hmm. That's fine. I want to see... the head of each table.						
P05	13:56:06	Will it show me that? Let's find out. Anyway, while it's doing that, my answer is 267. Is that the right answer? What'd they say? Yes, 267.						
P05	13:56:18	And the system's answer is also 267. I'm not going to do it myself. That seems like a lot of work. How confident am I in the system being correct? I am 4. How ready would I be able to react on this? Probably 3.						
P05	13:56:35	I asked the LLM. You show its work.						
P05	13:56:40	And the steps. are what I would do.						
P05	13:56:48	I did not get a chance to see the underlying... computation.						
P05	13:56:56	And without the sidebar. It is too much friction.						
P05	13:57:03	or me to... Check its work.						
P05	13:57:09	Step by step. Uh-huh, so that's what it looks like. Uh-huh.						
P05	13:57:17	False. Yeah, I just, I believe it. That's fine. Do I trust the system's recommendation? I give it a four.						
P05	13:57:24	Next. Uh, no, I would use this system less frequently. I like at least the illusion of being able to trust work.						
P05	13:57:31	Unnecessarily complex, obviously wrong, is easy to use. Yes. No, I would not need the support of a technical person. Various functions were all integrated, sure. To mention consistency? No.						
P05	13:57:43	These are easily cumbersome to use. No. Confident using the system? No, not at all. Uh... you know... I dislike taking things on.						
P05	13:57:58	From an LLM. Unless I can run a unit test.						
P05	13:58:13	via an actual language. And actual, you know, interpreter compiler.						
P05	13:58:21	interpreter and not... Just next.						
P05	13:58:27	Token prediction.						
P06	11:48:46	Okay, um... So I guess for this task, determine how many beaches had a higher bacterial exceedance rate in 2013 than in 2012?						
P06	11:49:02	Okay, so first I'm going to ask this guy, can you give me the bacterial, let me just double the bacterial.						
P06	11:49:15	exceedance rate for all the NASA 2 6 public.						
P06	11:49:26	beaches that have data for 2012 and 2013 in 2 columns, because I just before I ask it to compare the 2, I just kind of want the raw data.						
P06	11:49:43	So I'm going to ask it that.						
P06	11:49:55	Yeah, and I think I considered like the I tried to consider the beaches that only have data by saying like the beaches that have data.						
P06	11:50:05	Because I don't want beaches that don't have both ears.						
P06	11:50:25	In the your answer box. Can I just like like is your? How is your answer different from system answer? Yeah, so I guess it's like, so like the system probably would give you some response. But like, say, like, if you are really doing this job.						
P06	11:50:42	like, do you trust? Do you want to, like, just use the system answer where you kind of like you check the system answer you want to do is just like what you believe the answer is versus like what returned by the system that kind of like relevant to this question. Got it. Okay, so I to answer it, I think I'm gonna ask it the question itself separately after getting the data this first time.						
P06	11:51:05	Okay, cool. Expand, please. Okay. So these are all the.						

P06	11:51:16	These are all of the beaches that have. Oh, I would love the... it didn't give me the full results. But if I'm going to ask it like, if the full results include beaches that have.						
P06	11:51:35	Ada for both years. Then I. would like her full results.						
P06	11:51:42	and I spelled results wrong, which is tragic. And it'll ask for a specific beach.						
P06	11:51:52	Type public swimming beaches. I see.						
P06	11:52:00	I'll take the full table here, because I'm too lazy to.						
P06	11:52:06	I'm too lazy to download files. Um... But I should have. I'm thinking like after this, I'm gonna ask it to.						
P06	11:52:18	Filter by public swimming beaches because. I'd prefer that.						
P06	11:52:46	And just like from this like short one, my answer is 2. So like, because I don't. I know we have like a second task. So I will like move forward. But for now I'm going to put my answer as to ones that gives me another response. I'll.						
P06	11:53:31	Hmm.						
P06	11:53:37	Okay, so it's telling me that it gave me the answer in a workspace, but I can't seem to see the workspace. So I'll just ask it. Can you filter by.						
P06	11:53:51	public swimming. Peaches...						
P06	11:54:24	Oh, okay, so every record... Um... Okay, can you give me a CSV of this, please? So I'm going to ask it for a Csv, because it did not open the workspace the way I'd want it to.						
P06	11:54:42	Yeah.						
P06	11:54:57	Once it does that, I will send it the actual question itself to see what its answer is compared to mine.						
P06	11:55:14	Okay, I'm just trying to download it. And if copying it to clipboard.						
P06	11:55:22	Uh...						
P06	11:55:27	Okay, I'm just going to ask it this question to see.						
P06	11:55:36	click tap the cell. I don't see the cell. Do you know where the cell is?						
P06	11:55:43	Yeah, I think it's... It's like sometimes they could be it's just like working with like ChatGPT. Sometimes it's like.						
P06	11:55:52	There's like some randomness with like how it put those things like maybe say like for ChatGPT, there could be like, sometimes it doesn't provide a link where the link links to some other place. But maybe something it provides more accurate like.						
P06	11:56:10	like maybe like the the title of the thing. So I think it's kind of like the way Lm hallucinate. Like, I think in some ways. Okay, so this one's answer is 268. And how confident I'm like.						
P06	11:56:30	I feel like I'm a 3 in confidence. I would not be ready at all.						
P06	11:56:39	Well, let me actually, so the confidence, I'm like kind of a three on because.						
P06	11:56:45	Because it's not showing me the CSV like if I got to like, if I was manually counting it, and I got to, like, 100, I feel like I'd be like, okay, this is actually, like, pretty accurate, and I'm not confident, like, for this one that I need, like, the specific.						
P06	11:57:01	Like I think... Oh, wait, actually? Hold on. Yeah, I think for this one, like, if it's, like, over 250, right, I would just, like, want to check every beach anyways, you know what I mean? And then, similarly for acting on this result, I'm not at all ready because I can't see the data.						
P06	11:57:19	Um, and, like, even though usually GPT doesn't, like, it's possible that sometimes it might copy the wrong number from some places. So.						
P06	11:57:32	I would rather see the data than, like, do like an Excel like like formula to see, like, which one's greater. And what steps did I take to get my answer to, which is that at the start of the.						
P06	11:57:48	task. I asked it to give me a table and it gave me which how many? It gave me the first 10, like a preview. So, and it gave me a preview of beaches.						
P06	11:58:05	the 1st 10, and out of those 10, 2 of them had a greater.						
P06	11:58:17	increase in bacteria. I wanted. to see you a full table. But each time I asked it.						
P06	11:58:30	like. showed a cell in the table, but then it disappeared and I could not see it.						
P06	11:58:43	I trust the systems. I'm like, again, in the middle of like, I don't doubt it significantly. It would be, I think it would be enough to bring to someone.						
P06	11:58:53	Um, should I move on to the next? Cool.						
P06	11:58:56	That was fun. Okay, I think I would use. I'd like to use the system frequently.						
P06	11:59:01	I'm gonna lean disagree because, um... Like, I use it in like worst case scenario, running out of time and need a general answer. But if I want a specific answer, I would do that by myself.						

P06	11:59:17	I found the system unnecessarily complex. Now, I thought it was it made sense. It was just natural language. So I was like, I want these things. And anytime it gave me something that was slightly off, I was like, wait, no, I want this thing.						
P06	11:59:29	I thought it was pretty easy to use. I don't think I need the support of a technical system, a person, because I can speak, I think. I found the various functions in the system were well integrated. I'm going to disagree a bit because every time the like table popped up, it would disappear.						
P06	11:59:48	And that was tragic because I couldn't find it again. I thought there was too much inconsistency in the system. I'm also going to lean disagree. I didn't really test because I only asked it once.						
P06	12:00:02	But I, like, for the answer. So I don't think it was inconsistent.						
P06	12:00:09	I would imagine that most people would learn to use this system very quickly. I think that's true.						
P06	12:00:14	I found the system very cumbersome to use. No, not at all. I think I felt very confident using the system. I felt like... decently confident. Like, I'm confident ChatGPT knows 2 plus 2 is 4. I'm not confident that, uh...						
P06	12:00:33	What if it's misreading the data, you know? And I need to learn a lot of things before I could get going with the system. I disagree. I mean, I will be honest, though, like, I do use AI, I think, uh... not frequently, but like enough that, like, I know how to interact with it.						
P06	12:00:53	Cool. Can I? Yeah, you do have to log in. So that's like the part is is just like I will switch you to a new chat with a new model. Yeah, that's so great. Okay.						
P06	12:01:08	So I'm a data analyst at Disney here.						
P06	12:01:20	Determine whether the number of frauds and other data records for 2024 is consistent across data sets for the areas of Miami, Fort Lauderdale, and West Palm Beach.						
P06	12:01:35	So okay, there's a. After receiving a response. Okay, so I'm going to just test the sidebar first.						
P06	12:01:50	and you show me something in the sidebar.						
P06	12:02:01	So after... Ah, okay.						
P06	12:02:10	Okay. Yes, let's... go with the preview table.						
P06	12:02:39	So I think I see the sidebar, so cool.						
P06	12:02:43	Okay, um, determine whether the number of frauds and other data records.						
P06	12:02:51	from multiple. So the data is from multiple reporting systems, and I'm checking whether the reported counts.						
P06	12:03:00	Okay, first I'm going to ask it actually, unlike the last task. I just.						
P06	12:03:06	I want to see how it does it. So determine whether the number of frauds.						
P06	12:03:16	So I'm going to ask it first, st because I'm not really sure what exists right now in the records, and I want to see what columns it's going to pull up.						
P06	12:03:27	Um...						
P06	12:03:32	I think this sidebar is very fun. because it's like explainable AI which I appreciate quite a bit.						
P06	12:04:07	I'm going to close the sidebar for now, because.						
P06	12:04:19	Okay, yeah, I closed the sidebar because I just want to know. I don't know if it's going to update the sidebar as.						
P06	12:04:26	like it's doing its action, or if I should click on it again. So I'm just gonna, like, wait for it, because I don't want to get in the way of the data.						
P06	12:05:59	waiting. Nice.						
P06	12:06:06	Okay, it looks like the count is. Um... Consistent. So I'll just mark that right now as true.						
P06	12:06:20	Um... Okay, so 2 tables.						
P06	12:06:26	irrelevant. Oh, no, no, no. Take... okay. Identifies 23 tables.						
P06	12:06:35	And then two were. Okay, so... Okay, I see, I see. So there were... Other. Oh, boy, there's so many tables.						
P06	12:06:48	Let me... I'm just going to click on edit relevant tables to see. Okay, fraud and other report CSN Metropolitan areas, fraud and other reports.						
P06	12:07:03	It is only Florida, so that makes sense. Identity theft doesn't make sense like.						
P06	12:07:11	State rankings, fraud and other reports. I feel like that should. That could possibly.						
P06	12:07:18	Top 3 identity theft reports. But I think I don't... Oh, I'm sorry. Okay.						
P06	12:07:27	I'm going to ask it. What is in? And I wonder if I can copy paste from here. Yeah. Okay.						
P06	12:07:36	What is it? because.						
P06	12:07:45	Let's just I'm going to say these 2 are relevant, and then when it prepared the data.						
P06	12:07:51	It sees the... id counts.						

P06	12:07:58	Oh, I like show table diagram.						
P06	12:08:09	Okay. fixed it.						
P06	12:08:17	Okay, so... Uh, interestingly... So Florida has... For okay.						
P06	12:08:29	So if Florida has 47 or 474,314 reports and the state table has 171.						
P06	12:08:45	4, 6, 2. Does that mean the other 300,000 happened?						
P06	12:08:55	in non... Metropolitan areas like, where's the? Why is it inconsistent?						
P06	12:09:05	It would make sense if it was, like... Was I trying to find, um... Yeah, like it would make sense if we were looking for, like, specifically these 3 cities.						
P06	12:09:18	So I just want to know like why that inconsistency is happening.						
P06	12:09:24	Um... Anyways, all poop. Oh, no, so I can't see the. Oh, that makes me so sad. I wasn't even done.						
P06	12:09:37	It's okay though, it's okay. Um, hopefully this one gives me something.						
P06	12:09:51	That would be nice to see like the preview or like sidebar again like for each.						
P06	12:09:58	So like if I could go back and see the previous one to see how it's changing things, if anything.						
P06	12:10:11	Yeah, so I think like. If it gives me an answer to this.						
P06	12:10:17	Okay, not quite the.						
P06	12:10:24	Uh, see, okay. Interesting, interesting, interesting. Okay, so when you add the M the metropolitan area like MSAs. What is an Msa? I'm gonna say.						
P06	12:10:37	Oh, boy, that's not what an MSA is in cities.						
P06	12:10:43	Metropolitan statistical areas. Got it, got it, got it.						
P06	12:10:48	When we add up all 22 Florida metropolitan statistical areas.						
P06	12:10:54	Um, you get this... reports outside of any MSA.						
P06	12:11:01	Okay, yeah. So this includes Tampa or Orlando. Um... Yeah, wait, I would love. Yes, I would love that table showing each.						
P06	12:11:15	Across all the tables that the Miami. FL West Palm Beach.						
P06	12:11:25	Msa is consistent. And can you show me the table? Itself?						
P06	12:11:37	the tables. themselves.						
P06	12:11:43	Great. This is so fun. I'm having a lot of fun.						
P06	12:12:34	Yeah, so I can also just like add like the reason I searched what an MSA is in another tab instead of like here, because I could just ask it a quick that question. But because, like the previews were disappearing and stuff like I didn't want to like change the train of thought, you know.						
P06	12:12:53	I was like, let's stick to the data here. Have another tab open on what an MFA is. And also, that's like a simpler.						
P06	12:13:01	thing. Like, it's a simple. Like, if I were to ask Google simple things, I would do that.						
P06	12:13:13	Yeah, because I'm like, it's rare. I just want to keep it on its path, because I want the path to be right.						
P06	12:13:43	See, like, so this one says state. Okay, so this is the name of the table.						
P06	12:13:49	and it says this. Okay, so this is state, and then Msa. Okay, so this one makes sense.						
P06	12:13:57	CSN metropolitan Areas Fraud and other report. Okay, okay, so maybe these are the 2 relevant tables. I'm starting to believe it a lot more.						
P06	12:14:15	Oh, that makes me kind of sad that I actually kind of believe it. Okay.						
P06	12:14:21	Mm-hmm. Okay, a sample of each underlying table. Thank you. Oh, and now 3 tables were relevant, which is what I thought I I kind of trusted that that would be the case.						
P06	12:14:35	Target table and script, show my target table. Okay.						
P06	12:14:44	Oh, oh, okay, okay, okay. Where? What are we doing? Miami, Fort Lauderdale? Okay, cool.						
P06	12:14:51	Um... generating the final answer.						
P06	12:14:56	Okay, uh, what did I say? No other fraud. Okay.						
P06	12:15:01	Okay. I don't see the.						
P06	12:15:08	The preview of each one. But I'm gonna do something crazy, and I'm gonna say it's true. It's true. How confident. I'm pretty confident. I'm not extremely confident, because, like, I don't see the previews of the 10. Like, maybe I'm being dumb like maybe like this is a preview.						
P06	12:15:29	of the target table it made, you know? So I'm like, eh, I'm not sure how I feel about this one. Also, like, high key, why does this table have, like, rows without any MSA? Is that the... no, that doesn't make sense. Okay.						

P06	12:15:46	How ready? Oh, I'm still... I'm not at all ready. I don't believe it, like, with my... like, I believe it colloquially, I would tell people, oh yeah, it's the same.						
P06	12:15:56	But if I were to like make a big presentation or something, I would not, I would not like that. Well, how did I arrive at my answer? Okay, first I asked it the question itself.						
P06	12:16:08	Because I wasn't sure what tables existed or how to go about that, about finding that. In hindsight, I would just ask what tables exist?						
P06	12:16:25	And then after it gave me an answer. I tried to verify it with other tables, asking, like.						
P06	12:16:40	to look at another table that has state data. The State answer was a lot larger than the.						
P06	12:16:55	Given Msa, which made me suspicious, but... Florida... actually does have a lot of major cities.						
P06	12:17:09	So then I trusted it for. Afterwards I asked it to check again, and that led me to my conclusion.						
P06	12:17:25	Oh, that makes me sad. I feel like probably also it's, like, because I, you know, we have, like, a time limit. I would love to check more, and I'd love to play more. I trust the system's recommendation slash design or decision. I'm in the middle.						
P06	12:17:39	I'm in the middle. Um... The data consists of.						
P06	12:17:50	Um, this is, like, pretty useful, but it's... I don't like the format of it. Like, I'm like, I'm skimming this right now, and I'm, like, in the study.						
P06	12:18:07	Yeah, like, and I don't know what 2025 B means.						
P06	12:18:11	Um, or 2025 a. The table previews are crazy helpful. I use the table previews a lot in, like, SQL and stuff.						
P06	12:18:21	So, um. Table relevance feedback. This was fantastic, but I would love to see like a preview of the table when seeing the relevant tables.						
P06	12:18:33	Oh, I don't even... I didn't get... I didn't even see this, the table summary statistics.						
P06	12:18:41	This could be... I don't... I mean, I guess if you need a table with unique values, um, it's not that we were looking for unique values, it was just, like, we needed all the values.						
P06	12:18:53	Operation steps. Yes, I want to know every step it did. So like a SQL query to like.						
P06	12:19:00	find stuff that's perfect. Um... The operation diagram.						
P06	12:19:08	Yeah, I mean like a visualization is always, I think, nice.						
P06	12:19:14	So I'll say four. Um... But I don't know if, like, I think in this example, the reason I'm not saying a 5 is because why would I want a union the 2 rows right? I want to compare the 2, so it's like I wish there was like a reason that it chose union.						
P06	12:19:32	A code snippet, I think, is useful if you if you know SQL, and if you like if this matters to you like, I know like what it means when it's saying like, Oh, create and replace a table and like select these like columns and whatever. I'm not confident. Everyone knows that, though.						
P06	12:19:48	So I'll say like a four. And the code explanation.						
P06	12:19:55	Yeah, see, like, that's pretty helpful for somebody who doesn't know. I'm also like curious, like, if someone doesn't care, though, and like, do they want that? But and then the column dictionary. Yes. Oh, this is good.						
P06	12:20:10	I love this. I love this a lot. Step navigation.						
P06	12:20:16	I think like this was helpful, but I feel like I wasn't getting what I wanted from these. Like, um... Like this target table, like, oh, I guess I could download this. Oh, I should download the CSV. Okay, I'm just.						
P06	12:20:33	Oh. See, but, like, if I'm just downloading CSVs and I feel like I could just do it on my own. Like, I'm like, I don't really need... this guy to help me with thought.						
P06	12:20:48	Either way, I think it's some people, like, I didn't know what steps to go through, so it was nice to have the steps. Oh my gosh, we're out of time. Step description. Are you sure? Okay, um, step description... Yeah, I think the step on paper step description is useful, but I'm not sure how.						
P06	12:21:07	how helpful they were to me, specifically.						
P06	12:21:15	Right? Like generating the final answer. The script runs on target table and formats the output as a user facing like. That seems like I think it should just generate the final answer.						
P06	12:21:27	Um, because it told me all the steps before. Code editing. Oh, I didn't edit any of the code. I totally trusted it selected all the right columns. I got kind of lazy there, I can't lie.						
P06	12:21:40	But this is extremely useful if you get into the nitty-gritty of it. In the script execution.						
P06	12:21:49	This looks helpful, but I haven't done it. Yes, yes, I need to download all the files.						
P06	12:21:57	Um, I wish it stayed up the whole time slash I could look.						
P06	12:22:06	Through the the history of it. to see what I'm changing and how.						
P06	12:22:17	I'm gonna say I would for this one. I'm still in the middle of like whether I'd use it or not.						

P06	12:22:25	Uh, I didn't find it unnecessarily complex. I... I thought it was easy to use, but I think there were some things that made me a little confused, like the sidebar, like, disappearing, and, like, um, it was, like, a little... I was a little like.						
P06	12:22:40	overwhelmed by the amount of tables and everything. It just isn't the fault of this, but, like, um... I don't know, like, not seeing like not seeing the tables and just kind of seeing the titles made me a little...						
P06	12:22:56	uh, confused. I don't think I'd need the support of a technical person, but I think, like, sometimes it'd really be easier to just see the table itself. I thought the functions were like pretty well integrated.						
P06	12:23:10	And it wasn't inconsistent at all. Like it stuck by its answer, which is, like, weird.						
P06	12:23:17	I think people would learn to use it quickly, and it was not come not cumbersome. It was a little cumbersome.						
P06	12:23:26	It's a little commercial, I think, because it would just disappear. And then, like, I have to like click like if I click on this, nothing. Oh my god, it does! It does.						
P06	12:23:36	See, I'm just bad at... Okay, it does open. I understand now. I understand. I would love that. I I felt pretty confident.						
P06	12:23:49	I don't think I need to learn a lot of things.						
P06	12:23:54	I really like this. That's it for me. Thank you so much. Yeah, I hope I was helpful. Yeah, yeah, yeah, I think that's like really helpful. I guess I just, like... Well, let me think. I think I have a...						
P06	12:24:15	Some like a quick follow-up.						
P06	12:24:22	Yeah, I guess it's like I kind of like wonder like you also said, like, it's because like we are doing an experiment. But like, say, if you have more time, maybe like, what could be like the things that you really want to like check.						
P06	12:24:38	Two, maybe making more feel more confident, or do you imagine, like, is there like anything where you would do that would make you more confident, like, rather than redo everything yourself? Or you would just, like, kind of, like.						
P06	12:24:52	stay in the like neutral place as like a.						
P06	12:24:56	I think the only thing that would help me is time. I think, like up to this point, like most of the AI I've used has hallucinated random things out of nowhere. And it has been inconsistent like this one. I was shocked that it was consistent, and we used it only twice. But like if.						
P06	12:25:13	If I had used it like a few more times, if this was like a longitudinal study or something, I'd be like.						
P06	12:25:19	I would trust it more. The confidence would definitely already grew in this session. But yeah, it's just like my previous experiences. I was like, this is fine. Yeah, yeah, yeah, yeah, yeah, yeah, yeah, I understand that. Because I... actually, because, like, I have the assumption that it's.						
P06	12:25:34	kind of like I do like observe like like for some participants is like more like the prior is like higher. So it's like asking those competence score and trying to get a meaningful number is like it just like so many things happening there. Yeah. That's why I know, like the middle answer is the worst answer on a survey. But I was just like, I'm not like.						
P07	13:24:55	The recording is easier for me to keep the recording. But like you can like try maybe like treat this as your own computer. You can do whatever you want, just like, because we give you 2 tasks, and like when you're doing the task, maybe just like I should have shared the full screen.						
P07	13:25:12	So, like, when you do the task, maybe just, like, whatever you would do if you are really doing the task yourself. So if you want to download something, if you want to search something, just feel free to do so. If... yeah, because it's my computer, if you just, like, happen to navigate to some place, you don't want to navigate to.						
P07	13:25:30	like, it's fine to do any everything, but like also it's fine to let me know. I can just help you navigate back. Yeah, I think we'll just get started. Yeah, yeah, yeah.						
P07	13:26:08	I just hit. Yes, you're right. Yeah. Just let me take one more thing. Check the model, because there are 2 models. So you receive a first.						
P07	13:26:18	Let me just... Don't worry.						
P07	13:26:24	There's one. Oh, sorry.						
P07	13:26:32	Yeah, I think thus.						
P07	13:27:47	I'm really trying to like verbalize what you are. Oh, you want me to talk about it as well? Sure, sure, sure.						
P07	13:27:53	Uh, yeah, I'm just trying to figure out what frauds and other data records are in the first place.						
P07	13:28:06	and then because I don't really know what this looks like.						
P07	13:28:08	So if I can get a sense of what this data looks like, then I can.						
P07	13:28:11	compare it across, uh... the Fort Lauderdale and West Palm Beach.						
P07	13:28:48	This data is like the Lm has access to it. Right?						

P07	13:28:53	Yeah, it's like you can imagine the the model have connection to your organization's internal. Do I not have connection directly to it? Because I guess it's abstracted away, right?							
P07	13:29:04	like you have access to the data myself like. Do I have to go through? Oh, yeah, you have to right here. But it's also available online. It's like. Oh, it's publicly available.							
P07	13:29:17	Okay.							
P07	13:29:40	It's pretty hard to find, I guess.							
P07	13:30:53	What's the difference between my answer and system answer? Oh, yeah. So so your answer is like the system answer would be like.							
P07	13:31:01	like the the the response you receive from the system that you deem the relevant to that question. But your answer would be like, what do you believe the answer should be. Oh, I see, I see. Okay.							
P07	13:33:17	Yeah, we'll be still trying to like verbalize. I know it's like everybody. I think based off of this. So I think I misunderstood. So.							
P07	13:33:27	It's aggregated across Miami, all of the two metropolitan areas, right? In one metropolitan. Yeah, so Fort Lauderdale and West Palm Beach are the same. Like, the data set has both of the data. And so I guess, like, there should be multiple data sets of this, right?							
P07	13:33:42	That's why... that's my understanding of it. And so this is basically trying to say whether or not they're consistent.							
P07	13:33:50	Um...							
P07	13:33:54	Oh my...							
P07	13:34:02	So I'm going to try to first. see...							
P07	13:34:14	How many datasets there are, and then I can compare across them.							
P07	13:34:17	To be honest, my answer here is probably going to be other.							
P07	13:34:21	because I personally don't have access to the data myself. I can't find it.							
P07	13:34:27	And this is only giving me like aggregate statistics, which is LLM based. So I'm not sure.							
P07	13:34:34	Of the... truth of the responses, but the system is probably going to answer a true or false.							
P07	13:34:41	Um, since I...							
P07	13:34:47	I'm finding.							
P07	13:34:54	Manually...							
P07	13:35:05	middle.							
P07	13:35:15	schedule.							
P07	13:35:28	Did not. Okay.							
P07	13:35:32	Such I asked. What is this?							
P07	13:35:39	Caesar 2.							
P07	13:35:50	4 data sets. Can you...							
P07	13:36:23	Especially for me directly. I wish.							
P07	13:36:28	Go ahead before this. Uh-oh.							
P07	13:36:35	I'm gonna see her.							
P07	13:36:42	Dataflats. Assisted... There are four.							
P07	13:36:50	Then... All right.							
P07	13:36:55	C. 2. Permanent if there are any inconsistencies.							
P07	13:37:35	The answer provided.							
P07	13:38:01	So just check that there's the numbers were the same.							
P07	13:38:09	For all 22.							
P07	13:38:13	22 metro air service areas. So I think I misunderstood. I meant within.							
P07	13:38:28	3D...							
P07	13:38:42	I met Lucinda. entries only for...							
P07	13:38:50	Provided its appearance... I misunderstood my question.							
P07	13:39:17	us. Any more time.							
P07	13:39:22	about inconsistencies within the two areas specified.							
P07	13:40:01	No inconsistency. Okay.							
P07	13:40:07	This is true. Once I... Let's go then.							
P07	13:40:14	Yes, sir. Oh, no.							

P07	13:40:22	I'll just move on to the next one.						
P07	13:40:34	use... No...						
P07	13:40:44	Is that...						
P07	13:41:01	I need to switch to a different model, but just one second. And this just like doesn't tell any information. You're just. You can just skip that.						
P07	13:41:11	I just said yes, yeah, great. Okay.						
P07	13:41:29	Each time there's a side where you can. Oh, well, that's cool.						
P07	13:41:49	This time I'm just going to copy paste this.						
P07	13:41:53	Determine how many beaches I have.						
P07	13:42:00	I think that's there.						
P07	13:42:05	And after this. It's a pretty... okay.						
P07	13:43:02	This is public data. Yeah.						
P07	13:43:42	Oh.						
P07	13:44:26	There we go.						
P07	13:44:39	David.						
P07	13:45:36	How do I see it?						
P07	13:47:30	Uh, confused. This only shows violation, right?						
P07	13:47:37	The data only shows violations, but doesn't show the actual... bacteria.						
P07	13:47:44	Great. Let me look at the question again.						
P07	13:47:49	had a higher bacterial exceedance rate.						
P07	13:47:55	Your examiner changes in exceedance rates. Yeah, I guess that's just like commonly like some data table's name is not super descriptive. But like some... there would be some interpretation of the column. Maybe there's.						
P07	13:48:11	Yeah, I see. I'm wondering if does the data actually have.						
P07	13:48:18	Because based on here, it looks like it's just exceedances, right?						
P07	13:48:31	Okay.						
P07	13:49:19	Here we go, 200th. This was decreased from the number into a zomb. Oh, great, perfect.						
P07	13:49:30	I need to find...						
P07	13:49:48	this.						
P07	13:50:03	275. Haha, a little different. I wonder why.						
P07	13:50:17	Okay, let's do something.						
P07	13:50:23	based on... Can I attach? Can I make like PDF attachments in this? Oh, yeah. Yeah.						
P07	13:50:30	Let me start with Spanish. the difference in... Exceeds and experiences.						
P07	13:50:42	No, I mean. I think I cannot repeat it.						
P07	13:50:45	Oh, I can't read PDF. Okay. Yeah. Yeah, that sucks.						
P07	13:50:58	5.8%, 2% makes sense.						
P07	13:51:26	He did.						
P07	13:52:34	That's probably why the difference is not the same.						
P07	13:53:20	Yes.						
P07	13:53:41	You're reading. It is actually us.						
P07	13:53:48	Only bridges went.						
P07	13:54:00	Here we go.						
P07	13:54:05	Increase. which.						
P07	13:54:11	the reports directly.						
P07	13:55:38	Yeah, just the same like it's a good idea of the system as well.						
P08	14:05:02	old screen and like you can take my computer, like, as your own computer, so it is like, I do have something open, but, like.						
P08	14:05:11	Like, maybe like a like is just like when you're trying to finish the task, just imagine, like, you are really trying to solve the task, and with your own computer. So it's like, if you want to search something, if you want to download something and open something with some software, as long as I have those softwares like.						

P08	14:05:28	Feel free to do so if you like accidentally click on something because I didn't clear things up. It's fine. I actually don't mind, but, like, if it's, like, too messy and you had a hard time to navigate back, we're trying to open something and you cannot, just let me know, I can help you. Yeah, and also, like, if you have any questions, like, during the process, let me know. If I cannot answer, I will let you know. Okay.						
P08	14:05:51	Cool. Yeah, I think that's basically it. Oh, and there's, like, a little inconsistency with the form, because it was previously online. But the only inconsistency is for like login, because I already logged you in. So you don't have to worry about that. Let me just check for one more thing.						
P08	14:06:08	And then I think we are and there's like one part ask you to switch tasks to log out and log in again. Okay. I will let you know, but you don't have to do that. We just switch model. I will do that for you. Sounds good.						
P08	14:06:24	Um... I am currently using this. Okay.						
P08	14:06:33	Reading this...						
P08	14:06:53	Okay. The sidebar. Let me read this again.						
P08	14:07:01	You receive...						
P08	14:07:06	Okay. Okay. So I should type something in here, I think.						
P08	14:07:14	Um...						
P08	14:07:22	bacteria in beaches.						
P08	14:07:29	Uh... In public.						
P08	14:07:36	Which is Massachusetts.						
P08	14:07:41	I'm planning the next sequence.						
P08	14:07:49	Mm-hmm. Okay, it's executing an action.						
P08	14:08:05	I'm just going to explore. Controls chat controls.						
P08	14:08:43	Okay, cool. I found statewide sampling records.						
P08	14:08:51	I'm pulling in the full set of annual tables.						
P08	14:08:56	things by her year. Could you let me know?						
P08	14:09:02	Um, so... Looking at 2013.						
P08	14:09:09	So comparing 2012. 22013 levels.						
P08	14:09:19	So... and I'm just rereading to focus on analysis. Could you let me know?						
P08	14:09:25	of particular bacteria indicator. And statewide statistics, a specific beach, or several popular beaches.						
P08	14:09:36	Um... So I'm examining changes in exceedance rates over time.						
P08	14:09:46	Um, to see whether it's becoming more widespread, so I guess I'd be concerned with, like, all public swimming beaches.						
P08	14:09:56	And the question is, how many had a so how many compared to 2012?						
P08	14:10:04	Um, so how many grew in bacteria? I pulled the statewide tables, and then so we can compare them directly.						
P08	14:10:16	Statewide bacteria levels and violation rates for each year. But I can. They can refine it if I only want to look at one bacteria.						
P08	14:10:27	So, I want to preview it, I think. So... This opening stick. Okay, I believe this is what I'm looking for.						
P08	14:10:41	Yeah. Okay.						
P08	14:10:46	So great. So I have all these different 15 tables.						
P08	14:10:52	Carson Beach data set, Malibu. I don't know what Massachusetts beaches are, but Malibu sounds like California.						
P08	14:11:01	So... But let's look.						
P08	14:11:06	We'll look at that one. Um, and then I'm seeing these are 2024.						
P08	14:11:16	Um... Let's do.						
P08	14:11:22	Uh... okay. Body testing 2018.						
P08	14:11:30	Maybe. Let's see, view all retrieve tables. No. That's right.						
P08	14:11:41	Sources. Massachusetts Public Health. Okay.						
P08	14:11:50	And...						
P08	14:11:55	Let me look at this.						
P08	14:12:07	Okay, since these are similar name, I'll look at these.						

P08	14:12:13	Uh... Okay, these are E. Coli. And then, oh, indicator level might be relevant.						
P08	14:12:23	Um, okay, I'll just assume these 15 tables are the right ones.						
P08	14:12:30	Um, but wait, let me explore what edit relevant tables includes. Oh, I can just like delete tables or not. So never mind. I'll go to preparing the data. This section shows how source data was used to prepare for the target data.						
P08	14:12:46	Uh... Okay, never mind. Okay, target table construct this system just constructed a target table and generate a Python script to produce the result.						
P08	14:13:01	So let me see the. Oh. Maybe I have to select something.						
P08	14:13:23	Dragon numerical chart. To zoom into a range.						
P08	14:13:32	Oh, okay. That's something. Um, okay, but these are just, like, each values of the columns of this.						
P08	14:13:44	Um...						
P08	14:14:12	Okay. So this is rain, and then. McCormick bathhouse.						
P08	14:14:30	I guess maybe the okay, maybe I can ask.						
P08	14:14:37	Um...						
P08	14:14:41	Higher bacterial... So... If I can ask to refine by Conti.						
P08	14:14:51	12 and 2013 years.						
P08	14:15:00	takes the user input and searches for indices.						
P08	14:15:07	Oh, okay, so this is downloading it. Let me just look at it while it's loading.						
P08	14:15:13	See, I see. I see only 22,002 in here. Are there any other date things? No.						
P08	14:15:24	Let's close this. I think that might be from before.						
P08	14:15:29	Um... Oops. Oh, this back.						
P08	14:15:40	Great. So maybe the let me look at one of the locations.						
P08	14:15:48	2024. Okay, so this one goes back all the way, so I could compare 2012 to 13.						
P08	14:16:00	And then... These are rain levels.						
P08	14:16:05	and then... This is bacteria.						
P08	14:16:13	I don't know what these column names mean, but, uh... Maybe I can look it up.						
P08	14:16:24	So...						
P08	14:16:30	Okay. The summary I just shared is restricted to 2012 to 2013.						
P08	14:16:39	Separate the numbers for... break them down by... Break them down by... Yeah, I will break them down by individual beach.						
P08	14:16:58	But in the meantime, I will also look up what these things mean.						
P08	14:17:04	Milton Road.						
P08	14:17:26	Okay, so yeah, this is a indicator risk for acquiring something. If you do swim in water that has high levels of this.						
P08	14:17:38	This is these are some examples in Delaware. Okay.						
P08	14:17:56	So here, the average there. Okay, so this is broken down by violations, and then the average indicator by.						
P08	14:18:04	Something, see a few. Oh, I didn't see this. Oh, what? Okay, explain.						
P08	14:18:13	Okay.						
P08	14:18:18	I think we didn't okay okay no worries. Well, I just... Let's see a few bacteria count.						
P08	14:18:30	Okay, so like number of viable cells. Okay? But here is 2012 and 2013 for each of the beaches.						
P08	14:18:40	And this has a much stronger, or a much clearer overview of, like, how many.						
P08	14:18:48	Uh, average indicator violating percent violating samples. Um... So then... full table contains every beach. Okay, so this is a summary of it. But what I would probably compare is like the number of violating samples between 2012 and 2013.						
P08	14:19:15	So, and that would kind of suggest, like, growth or not.						
P08	14:19:21	Um...						
P08	14:19:28	So, but let me look at the this again. Oh, okay. So.						
P08	14:19:35	This has each of the rows, and so this is a broken up table for 2012 and 2013, and that's very nice.						
P08	14:19:42	I just want to download it and look at it.						
P08	14:19:51	Okay, yeah. So that's what I saw. And then indicator levels are here. Oh, but the and this is like by.						
P08	14:20:01	Probably each sample. So here's like a indicator that's true.						

P08	14:20:10	Okay. Um... So preparing the data.						
P08	14:20:16	This is how it took information and then generated to the target table and did it for 2013.						
P08	14:20:27	Um... Okay? And then this is also like a SQL query in order to.						
P08	14:20:35	get that. And then this is how. Okay, so that makes sense for how it generated those things.						
P08	14:20:42	But I do want to.						
P08	14:20:47	Like, maybe count? Uh, number of beaches.						
P08	14:20:55	where 2013...						
P08	14:21:00	violating samples is greater than 2012. Violating samples.						
P08	14:21:14	Is that right? Higher. Yeah. Consider only beaches where... with samples collected. Okay, that should hopefully do that.						
P08	14:21:26	Um...						
P08	14:21:32	Oh, I didn't do this either. But yes, I see it. Okay. And then the answer once I get it, hopefully.						
P08	14:21:39	across public beaches, 2265 beaches recorded more. bacteria standard violations in 2013 than they did in 2012.						
P08	14:21:52	Um... Yeah, she'll be specific features.						
P08	14:21:59	Okay, but 265, and then clarifying question for you for my answer and system answer, would it be like.						
P08	14:22:10	Just like what the system says, or what's the difference between? Yeah, the sister monster is basically like what the system like says, but like you can only paste the things that you think is most relevant to the question. Okay, you don't have to, like, paste the entire like for your answers, like, what do you believe the answer is? Oh, okay, okay, so... Maybe, yeah, okay.						
P08	14:22:32	Show me the full list. Oh, did I wait? Oh, the full list.						
P08	14:22:43	see here. Provide.						
P08	14:22:49	Complete list. is download the CSV.						
P08	14:22:56	So. This one is for sure 265.						
P08	14:23:02	Right? It's by beaches, right? Okay, well, I will verify once I look at the CSV.						
P08	14:23:10	and guess.						
P08	14:23:15	Right, that's, like, what my answer is right like what I would trust as a member. Yeah, I guess it's also like like if you think you would only take the system. I see so far. But like you think you should verify, then go ahead. Got it. Okay.						
P08	14:23:38	Alrighty. Okay.						
P08	14:23:43	I think I probably guessed Doc. Oh. Actually, yeah, go ahead. Yeah, I didn't. Yeah, maybe.						
P08	14:23:53	Just try again. Let me see if I can... Because I never write to this.						
P08	14:24:02	Yeah, maybe try again. Provide complete. as downloadable.						
P08	14:24:11	CSV. Okay, yeah, it's running now.						
P08	14:24:15	Yeah. Also, do you have to run at 2 30? Oh, no, I'm good. Do you have another person? Okay, sorry. I feel like I'm sorry. Yeah, I mean, like, I don't mind to give you like more time like I again work like concise. Yeah, yeah.						
P08	14:24:31	Okay, the full list by clicking the download icon.						
P08	14:24:37	in the results table, which I assume is here.						
P08	14:24:45	Oh, oh, wait, no. Where do I get this results?						
P08	14:24:52	Download it. Next to the result named.						
P08	14:25:08	Great.						
P08	14:25:19	Download it. Excellent table.						
P08	14:25:36	Where is the stuff?						
P08	14:25:41	Show target him? Is this it?						
P08	14:25:50	No.						
P08	14:25:56	Fish violations 2013 versus. and the header bar.						
P08	14:26:06	No. of the result preview.						
P08	14:26:15	Okay.						
P08	14:26:20	the table.						
P08	14:26:50	I'm struggling a little bit. If you retrieve table.						

P08	14:26:56	Okay.						
P08	14:27:01	on the right hand results pane, locate the table named Conductor execution.						
P08	14:27:18	Click on the results tab in the lower right.						
P08	14:27:29	No.						
P08	14:27:36	then get hope about the I mean, I guess that is more so like.						
P08	14:27:42	If you're really stuck, what would you do? Okay.						
P08	14:27:54	Oh, wait, choose. Wait, no. and the right hand results page. But the other thing is like the but like, maybe I can like, you know, the touch chat controls is not implemented by us with like default to like open Ui. Yeah.						
P08	14:28:11	Just like the other thing. This is why it's fine. The other thing. Yeah, yeah. Okay. Right, right.						
P08	14:28:25	Oh, wait. Is this it? execution result, and then.						
P08	14:28:36	Um... conductor. Okay, this is the execution result. Hover over the table's head bar.						
P08	14:28:58	What's more.						
P08	14:29:02	No.						
P08	14:29:08	header, bar of the result preview. Excuse me.						
P08	14:29:17	If you don't see that.						
P08	14:29:23	No, that's the HTML.						
P08	14:30:06	Yeah, this is the site here. Okay, I I would like you're not changing that. No, yeah.						
P08	14:30:37	Hmm? Got it.						
P08	14:30:41	So that just has. Can done with the floor.						
P08	14:30:46	In our results pane...						
P08	14:31:45	I'm so confused.						
P08	14:32:09	Okay, just like there's is there a results pane that I should be able to navigate to?						
P08	14:32:16	that I am. Well, I mean, I don't know if you have like interacting with Lm, although I know it's, I guess it's just like, I mean, I I I don't want to interrupt. It's because I think that's.						
P08	14:32:30	kind of like part of the experience, I guess it's just like if you really just couldn't find something, then yeah, what would you do? Okay, okay. No, no, that's okay. I just want to make sure... I'm...						
P08	14:32:47	Yeah, and the other thing was Lm, I guess it's just Lm do hallucinate a bit. Yeah. So it's not like everything.						
P08	14:32:56	Like it says must be there. I okay yeah sorry I I I I don't know what to expect completely.						
P08	14:33:05	Well, okay, I'll try to. If I, yeah, was stuck, I would. I don't see results paid.						
P08	14:33:17	But I... okay, I guess I can... answer that I I would say 265, I guess, but I'm not confident so far. Maybe it will help me. Oh, here's look in the.						
P08	14:33:30	There is no results tip, I don't think. So yeah, I would probably...						
P08	14:33:42	See? 0 bar.						
P08	14:33:47	Oh, con wait.						
P08	14:33:59	Use the miniature in the top menu.						
P08	14:34:07	Expand.						
P08	14:34:26	Run.						
P08	14:34:48	It didn't print. Oh, okay.						
P08	14:34:54	Just sorry, I'm taking a long time. results. No, these aren't clickable things.						
P08	14:35:04	Okay, I think I've... to hit my limit.						
P08	14:35:12	Um, I'm not confident. No.						
P08	14:35:18	I tried really hard. to get to the... the source that was given to me.						
P08	14:35:33	But I couldn't figure out how to access the result table that I was promised.						
P08	14:35:43	I tried to troubleshoot. a few times, but I got frustrated.						
P08	14:35:54	uh, not... seeing the things that were.						
P08	14:36:01	Um... I also tried to run the Python script.						
P08	14:36:08	But based on my. understanding of what.						
P08	14:36:13	the Python script. Should output. I decided to call it quits.						
P08	14:36:23	Um, I guess I kind of trust it because it seems reliable by being able to view things.						

P08	14:36:32	Data. Oh, yes, this was helpful. This was also helpful.						
P08	14:36:38	Um... Yeah, that was helpful to get a sense of, like.						
P08	14:36:45	To make sure that it was looking at the right years, because initially when it wasn't, I was like, okay, that's not useful.						
P08	14:36:51	Um, I didn't really find this helpful, but maybe it could be.						
P08	14:36:57	# !						
P08	14:37:03	This is useful. I didn't even look at this.						
P08	14:37:10	Um... This was... kind of hopeful. I didn't really look into it that much.						
P08	14:37:19	Um...						
P08	14:37:26	Yeah, this was helpful. This was also helpful.						
P08	14:37:32	It was helpful to see the breakdown of things.						
P08	14:37:36	And I also liked how it was specific. I didn't use this.						
P08	14:37:49	It wasn't helpful for me because I couldn't get it through.						
P08	14:37:54	Yeah, well, it was helpful to verify things. Yeah, I guess I was I was very confused and not sure if it, but I'll type it.						
P08	14:38:08	is and not sure if hallucinations were happening.						
P08	14:38:18	Yeah, maybe. Yeah, well, okay, yeah, yeah, you can. Yeah.						
P08	14:38:26	Sorry.						
P08	14:38:54	There's test, too. Yeah. Yeah, but, like, there's, like, one last survey, but yeah, so you can just like do yeah. So first, this one, this is the inconsistency I mentioned. I would just like switch the model for you. Okay. So you would do a new chat, and there's a different model. Okay, yeah, yeah.						
P08	14:39:15	Okay. Sorry I took so long. Don't worry. A lot of users just like take longer. Okay. Just learn more things. Yeah. I feel like I can even like talk to you a little bit. Okay, sounds good. Yeah, your team analyzes consumer fraud reports.						
P08	14:39:32	Because the data is aggregated from multiple. are consistent. Okay, using the system determine whether the number frauds and other data records is consistent. Okay.						
P08	14:39:46	Um...						
P08	14:39:51	Okay, so... find me consumer fraud reports from the Ftc.						
P08	14:40:09	Using the system to determine whether the number for 2024.						
P08	14:40:16	Okay, so I'm looking for... 2024 Metropolitan area of Miami.						
P08	14:40:24	Poor Lauderdale, West Palm Beach.						
P08	14:40:43	Okay.						
P08	14:40:50	So... I want to look at... Um, for... Go ahead and copy and paste this.						
P08	14:41:03	ports for...						
P08	14:41:17	and number of frauds and other data records.						
P08	14:41:56	Okay. Brought in other reports.						
P08	14:42:02	It's the 1st out of all areas total reports.						
P08	14:42:07	Um... So yeah, come.						
P08	14:42:12	And then I'm looking at. Oh, this is 2024.						
P08	14:42:21	Okay. compare against other data sets from the area.						
P08	14:42:51	So total reports is 171.						
P08	14:42:57	Or yeah, okay, afterwards, find other data sets. Cover.						
P08	14:43:13	So national averages break down different agency data. That's the one.						
P08	14:43:56	I hope I'm not eating into too much of your other. No worries. I think it's like still like totally on time. Yeah, yeah. Okay, good. As long as like not like taking. No, I'm I'm totally good.						
P08	14:44:54	Okay, well, while it's still running... I think in answering this I might have some concerns like you using the interface is really nice to try to fact check, because I can see the like logical process of steps. But.						
P08	14:45:14	I'm sure like because there's this like additional layer of this interface rather than going directly to the source like FTC's website or something. This might. Okay, our search. Oh, okay, it didn't.						
P08	14:45:30	Find one. is so the only reference is at a national level. So it isn't an independent comparison.						
P08	14:45:43	Um... Yeah. Okay. So it couldn't find something else.						
P08	14:45:53	Uh... I'm curious like, is there a different agency?						

P08	14:46:01	To consult...						
P08	14:46:08	So, yeah, I think in general. Across sources. Okay.						
P08	14:46:18	So the system answer. Oh, okay, here.						
P08	14:46:26	Yes.						
P08	14:46:34	I'll choose the... Better.						
P08	14:46:40	Can you let Ftc with the. P.						
P08	14:46:46	So I'm asking it to compare the Fdc reports with the with Better Business Bureau.						
P08	14:46:54	complete and the Better Business Bureau is collecting and publishing complaint counts.						
P08	14:47:01	So a little different.						
P08	14:47:07	And I mean, yeah, I guess what I'm kind of understanding here is that, like, there would be different ways to analyze this concept of what is it?						
P08	14:47:20	Fraud and other data records, because the records are probably made because of different systems.						
P08	14:47:29	Um... Yeah. Okay.						
P08	14:47:36	Still working. But what did they say?						
P08	14:47:42	So...						
P08	14:47:46	So this just gives me a number of total reports.						
P08	14:47:51	and I'm going to kind of preemptively say false because I'm getting the sense that, like the numbers would differ depending on how.						
P08	14:48:04	how you aggregate the different reports. Um... So far, not super confident because it seems like there's like a level of analysis that I wouldn't readily be able to do with just the system.						
P08	14:48:19	Um, so, would it readily... uh, use this, and then... Yeah, okay, so how I this key takeaways.						
P08	14:48:48	Okay. Yeah. So the BBB contributes a portion of this.						
P08	14:48:49	Yeah, I. potentially misunderstanding question, but I think how I arrived at this answer. My understanding, based on.						
P08	14:49:02	the exploration with the system. It was that these records are aggregated from a number of sources, and depending on what you count as a like consumer fraud report.						
P08	14:49:23	Um... which would, like, inevitably vary from source to source.						
P08	14:49:32	There is likely. to be discrepancies.						
P08	14:49:38	Um... So yeah, I don't trust the system.						
P08	14:49:46	No. I don't think it was unnecessarily complex.						
P08	14:49:51	Oh, and then, yeah, I also... I didn't do much of exploring these.						
P08	14:50:00	I wonder... Oh yeah, I can let you know there's no side. No worries. I thought the system was easy to use.						
P08	14:50:09	Um, yeah, there is no issues on this one. I think that I would need... No. Um... the various functions were well integrated. Yeah. And then I don't think there was too much inconsistency. And I do think people would learn to use the system quickly.						
P08	14:50:33	Didn't find the system cumbersome to use. I did not really feel super confident using the system.						
P08	14:50:39	And I don't think I would need a lot to learn.						
P09	15:05:30	Okay. You're a data analyst and at the Ftc.						
P09	15:05:36	Consumer fraud. Okay. Your team analyzes.						
P09	15:05:43	She compiles complaints submitted by consumers across the Us.						
P09	15:05:49	You are estimating the total amount of money lost to fraud.						
P09	15:05:54	to quantify the overall financial impact and inform. enforcement priorities. Okay.						
P09	15:06:00	Using the system, determine the total amount of money lost to fraud across all payment methods.						
P09	15:06:08	Okay. Each time you receive a response, there's a sidebar.						
P09	15:06:15	Can be open for view. What is... what is this section? Is this the tool? Oh, it's like, it's just the instruction for the interface. It's like, okay, you receive response. You can. It'll open a sidebar. But like, because.						
P09	15:06:30	It's not like fixed there because some like integration issue, but, like, you have to manually click it. Oh, I see. Okay. Better guideline there. Okay, please confirm the sidebar is visible before proceeding.						
P09	15:06:45	So do I have to click on? So this is the tool on this on the side that I'm supposed to use. Yeah. Okay.						

P09	15:06:54	So...						
P09	15:07:05	Are you free?						
P09	15:07:23	Um... So he's like after you receive a response. So I should just try something.						
P09	15:07:31	Let's see, what do I need to do? Tumor.						
P09	15:07:37	Complaints made by consumers across the Us.						
P09	15:07:47	Any data set of complaints. Okay.						
P09	15:07:54	Then... So the sidebar should appear after, right?						
P09	15:08:02	Okay. each time you receive a response.						
P09	15:08:20	I'm just going to... Oh, I see. Okay, so I I have to do it all, and then answer here. Okay.						
P09	15:08:28	Um...						
P09	15:08:43	It's thinking.						
P09	15:08:53	I think I should have prompted it differently. Oh.						
P09	15:09:00	Can I interrupt it? Actually, I don't think. Can you stop or no? Let me. Okay, I'll just let it. Yeah, maybe let it. Yeah, because otherwise we could bring forever. But okay, so yeah, all right.						
P09	15:09:28	Okay, it's treating the table.						
P09	15:09:36	Integer and noise.						
P09	15:09:53	Does it usually take this long? Yeah, it take about a minute to 2. It depends on the questions. There are some quicker questions. Just take a second, sir.						
P09	15:10:05	Okay, there was a sidebar there for a second, then it went away. Okay. Yeah, that's why we give the instruction. Just to make sure it says. So, okay, after receiving the response.						
P09	15:10:17	View hide state. Okay.						
P09	15:10:24	Where is that?						
P09	15:10:37	Oh, here. Okay.						
P09	15:10:44	You had seen. Okay, okay, there we go. Um... Okay, so yes, I can see the sidebar.						
P09	15:10:57	21 tables were identified. Cool. Okay, I've located the FTC consumer.						
P09	15:11:03	Okay. They contain nationwide.						
P09	15:11:09	However... They don't include the individual complaint reports.						
P09	15:11:17	Aurora. Does not appear to be stored with the aggregated CSN data meet your needs, or do you specifically require?						
P09	15:11:26	No, I don't need this much information. I think I just need.						
P09	15:11:33	The amount of money they're complaining about, essentially. Let's see.						
P09	15:11:43	Can you... so I can use the model to extract.						
P09	15:11:48	like subsets of the data and stuff like that. You can try anything. Yeah.						
P09	15:11:54	Can you provide? the... Amount... of money.						
P09	15:12:05	in any who was in any denomination or any... across payments month across payment methods.						
P09	15:12:20	for each of these complaints. Uh, these... to provide a final... estimate of the total amount of money lost.						
P09	15:12:37	Okay.						
P09	15:13:04	I think it is because you asked it. Another question. Yeah, I should have waited. Okay, see.						
P09	15:13:24	I think. I think when I opened it, it kind of stopped the computation, maybe, because it's not thinking anymore.						
P09	15:13:36	Yeah, I I guess maybe like I should stop like telling you. But but just like maybe just do whatever you want to do like that situation like what would you try? Okay, me.						
P09	15:13:51	Let me just look at these reports.						
P09	15:14:21	Okay, so I don't think it has access to this. So I'm just going to Google.						
P09	15:14:26	Yeah. And the other thing is like, I think it is like you when you're trying to. But yeah, I think this I should let you know like when you're trying to open, and the vial is thinking, I think.						
P09	15:14:37	It's like you interrupted the process, so that's why, but usually you shouldn't leave the case.						
P09	15:14:43	Yeah, I think because I clicked on it, interrupted it. Okay. Yeah. So like, yeah, just like Lm. Just like try to again work. I'm just going to ask it if it has that information.						
P09	15:15:00	2 tables you retrieved. Contain the... need to contain... amount of money.						
P09	15:15:16	Lost for each complaint.						

P09	15:15:39	Oh, they do. So they contain columns such as total USD loss, total fraud loss, broken out by category, state, military status. They do not... Include a per-complaint dollar amount.						
P09	15:15:55	Okay, I don't care.						
P09	15:16:01	I don't need... per complaint dollar amount.						
P09	15:16:08	I just need... the total amount lost across all complaints.						
P09	15:17:07	Okay, give me a number. 9.8 billion dollars.						
P09	15:17:14	This figure was calculated by summing the total USD loss column for every US state territory.						
P09	15:17:21	Let me know if you'd like the number formatted differently. Okay, I'm going to go with 9.8 billion.						
P09	15:17:30	Seems like a lot. Um... Okay.						
P09	15:17:37	Paste the most relevant part of the system's response.						
P09	15:17:44	Um... I'm going to paste.						
P09	15:17:52	This part.						
P09	15:18:03	Okay. How confident are you in the system's answer?						
P09	15:18:10	I feel like 9.8 billion is a lot, but I could be wrong. So I'm just going to say medium confident.						
P09	15:18:19	How ready would you be to act on this result to make the decision in your job?						
P09	15:18:26	Um...						
P09	15:18:31	Let me look at the...						
P09	15:18:36	You're estimating the total amount of money lost to quantify the overall financial. I see.						
P09	15:18:43	Um... I don't know, I'll do medium again, because... I'm not super confident in the answer. Okay, briefly described how you arrived at the answer. Okay, I asked the system.						
P09	15:18:59	to gather data related to fraud complaints.						
P09	15:19:08	and then... take the total, which is, and this is aggregate data.						
P09	15:19:16	Let's just aggregate data. I asked the system.						
P09	15:19:24	to sum all the.						
P09	15:19:30	dollars across complaints. Okay.						
P09	15:19:37	I trust the system's recommendation decision. I think I'm in the middle for that.						
P09	15:19:41	Okay. Next. Okay.						
P09	15:19:52	The data files. Data set context. Okay, description. The data files consist of beach, water, quality data set from Massachusetts Environment Public Health.						
P09	15:20:06	Okay. The Bay Beach data set. Okay, so it's okay. And at rainfall data set. So it's beach and rainfall data set from 2,002 to 2025. The data has been used in yearly reports.						
P09	15:20:21	to uncover trends in beach water pollution and the correlation between.						
P09	15:20:28	rainfall and... Water quality. Okay.						
P09	15:20:35	Hmm.						
P09	15:20:40	How am I supposed to answer this question like it just as you like, how helpful like each feature like on the sidebar, you think it is, and like the content.						
P09	15:20:51	There is, yeah, like, like the just an example. It's just like this is a feature on the sidebar. So how helpful do you think it is like in terms of, like, helping you, like.						
P09	15:21:04	Using the system work and just helping you solve the task. So the task here is the correlation task. Which task is this? I mean, it's just, like, maybe, like, we can just look back to this.						
P09	15:21:18	you're nervous like so. It's basically asking you like how useful this part is. Yeah, yeah, yeah. Okay. So do you want me to check from the previous task, or do you want me to just read this and understand how useful this is? Oh, previous chat previous task. Yeah, because those are just like examples. I see. Okay. So let's look at this.						
P09	15:21:42	The data sets are accessible. through portal. Okay, Wikipedia, including information on merger filings. The data is used in visualizations and dashboards that analyze nation level debt and fraud. Okay?						
P09	15:22:00	sources... Okay, so Wikipedia. There's a Fgc dashboard government. Okay, the sources seem very useful, but the description is I find quite confusing.						
P09	15:22:18	I think mainly in format. Yeah, I feel like it could be a little clearer, but it's, I guess, like... I guess it's sort of useful. So I'm going to do 4.						
P09	15:22:36	because it's like a summary of what it did. Okay? And then table preview.						
P09	15:22:47	Which one is this? Good.						
P09	15:22:52	you retrieve tables. Okay, here we go. Category number of reports, percentage, subcategory.						

P09	15:23:02	year. percentage of what?						
P09	15:23:07	I feel like there's information missing.						
P09	15:23:17	And if I want to look at more rows, can I do that?						
P09	15:23:27	I go here. So these are all the tables.						
P09	15:23:36	It would be nice if the tables were linked to the sources somehow, I think. Maybe that information is somewhere?						
P09	15:23:45	Huh. But it's not clear. So.						
P09	15:23:54	Yeah, I mean, I like the interface. But some of like, for example, percentage is kind of confusing to me.						
P09	15:24:02	Um, so... I think it's still useful, so I'll say 4, or I'll say 3 because I think it could be improved. Okay.						
P09	15:24:15	Table relevance feedback. All right. So that.						
P09	15:24:25	Maybe here. Oh, I would just let you know this. Maybe you guys too. Yeah, you would like if you go back and then like we have like this. Oh, okay.						
P09	15:24:38	Table relevance. Okay, so it tells you. Okay, that's nice. I like this.						
P09	15:24:46	Um.						
P09	15:24:50	So there's only one relevant table according to this. Let's see. Can I click on that table?						
P09	15:24:58	here. Hmm?						
P09	15:25:05	Oh, it's here. Okay. Yeah, I think that's pretty useful.						
P09	15:25:11	So, save board. Okay. Table summary statistics. Oh, that's what I was looking at before. Let's see. So these right? Yeah.						
P09	15:25:25	medium USG number of reports percentage.						
P09	15:25:34	Um... State. I just I don't have any reference for these numbers. Like, what does state mean?						
P09	15:25:44	So I think it could be improved. in terms of the metadata.						
P09	15:25:55	Yeah. Okay. I'm going to say 2 for this one.						
P09	15:26:02	Okay, operation steps description. Okay. That was here.						
P09	15:26:14	Okay. So projects a table.						
P09	15:26:23	into a target table.						
P09	15:26:29	Well, I think what's missing is how it does the projection.						
P09	15:26:35	Like, what operation is used? Oh, maybe here?						
P09	15:26:45	I clicked on... Oh, here we go. Okay.						
P09	15:26:54	Yeah, I feel like this is not very clear.						
P09	15:26:58	So I'll do it, too. Oh, and that's okay, I'll do. Yeah, I'll do it, too, for both of these. Okay, code snippet. I saw that somewhere. Show code.						
P09	15:27:13	Okay.						
P09	15:27:17	Oh, what language is this?						
P09	15:27:28	Yeah, I don't. I think probably. Oh, explain code. Let's see. Let's explain.						
P09	15:27:40	Yeah, I think maybe because I'm not familiar with the syntax.						
P09	15:27:46	Okay, we take the whole table. from the collection name tables and save it to a new working table called this.						
P09	15:27:57	No columns are moved. Okay. Starting with, we keep only the columns. Okay.						
P09	15:28:05	Alright, so you're indexing... And that's it. Okay.						
P09	15:28:13	Well, I I feel like the description is good, but I wonder if I.						
P09	15:28:18	I didn't really look at this earlier to understand if it did the right thing.						
P09	15:28:24	Um... So... Yeah.						
P09	15:28:36	I mean, it's a good description of the code, I guess. So.						
P09	15:28:47	I will say a 3 for this. Okay, code explanation. Oh, that's what I did. Okay, I'm going to do a 2 for this. But then.						
P09	15:28:58	a 3 for this. Okay, column dictionary. Oh, this is maybe what I wanted to see before.						
P09	15:29:09	Um, this is free. Step down. Yeah, here. Okay.						
P09	15:29:16	Number of reports. Yeah, this is super nice, I think.						
P09	15:29:24	Medium dollars lost. per report with loss in state. Okay.						

P09	15:29:30	And then so you do, I would imagine you're supposed to do medium dollar loss times number of reports, and then some across.						
P09	15:29:39	Oh, here, or just some across the total. I see. Okay.						
P09	15:29:46	Yeah, very helpful, I think, so I'll do 4 for that one.						
P09	15:29:50	Okay, step navigation. I did find this good. Step description... Let's see.						
P09	15:30:02	Oh, I see. Let's see.						
P09	15:30:09	I don't find this to be super helpful.						
P09	15:30:17	I feel like it's not saying more than I don't. I don't think it's adding to the analysis.						
P09	15:30:25	Yeah, just put it to. Okay. Code editing.						
P09	15:30:40	There is like in step three. Okay. Like, if you click show pass on code. Oh, nice. And then scroll down a little. Yeah. And then there's an audit. I see.						
P09	15:30:58	create a replace. Oh, this is SQL, which I'm not.						
P09	15:31:02	I don't I don't know SQL very well, but.						
P09	15:31:07	Yeah, that's nice. I think it makes sense. Um... As long as you're familiar with SQL, which I guess that's the assumption.						
P09	15:31:26	Changes are not saved to the pipeline. The original script is restored when you exit. Okay.						
P09	15:31:33	So if I were to make a change...						
P09	15:31:39	I can do int. Looks like successful.						
P09	15:31:47	Okay, that's cool.						
P09	15:31:52	Yeah. I like that. Okay, script execution.						
P09	15:31:59	Oh, is that what I just did? Okay, yeah, that was good, too.						
P09	15:32:04	Downloadable files. Is this in two? Probably?						
P09	15:32:10	Oh, yeah, just like always a like pre-real tables are downloadable.						
P09	15:32:17	Yeah, policy step one step 3. Okay. Hmm.						
P09	15:32:27	So here, yeah. Yeah.						
P09	15:32:34	Okay. Yeah, it's, um...						
P09	15:32:45	So I can download all the tables.						
P09	15:32:50	Or just the target table, just the table that you can see can be downloaded can be downloaded. Okay. So even here I can download. Yeah, you just miss it a little app. Oh, I go down. Sorry. I.						
P09	15:33:07	Then just scroll down a little bit. There is like a download tool.						
P09	15:33:13	Let's see. How big is this?						
P09	15:33:19	Might have been too big. Okay.						
P09	15:33:33	Okay. a little confused.						
P09	15:33:44	These look like the same data set to me.						
P09	15:33:53	5 columns, 52 rows. Oh, here, let me go back. Maybe that.						
P09	15:34:04	You all retrieved tables... Maybe if you create editing, you'll be easier to see, because yeah, this bar is a bit too long. So maybe answer or not. Then yeah, yeah. Oh, all of these. Okay.						
P09	15:34:19	Got it. Okay.						
P09	15:34:30	Oh, wig.						
P09	15:34:35	Okay. Yeah, so this is not useful because it doesn't tell you about.						
P09	15:34:42	It's a little weird, because in my initial prompt, I didn't actually say anything about the total amount. I'm pretty sure.						
P09	15:34:51	So how was it able to identify? Oh, maybe because of my second query. Okay, never mind.						
P09	15:35:01	Okay, so this was cool. I like it. Is there anything else you would like to share about your experience using the sidebar? I mean, I think maybe because it was just my 1st time using it. I didn't know where to look about things.						
P09	15:35:16	Um...						
P09	15:35:21	I think overall it's quite good. But there's parts of it that are.						
P09	15:35:29	confusing. So I'll just skip that. Um... Okay.						
P09	15:35:38	Evaluating interactive data discovery interfaces. Okay, I think that I would like to use this system frequently.						
P09	15:35:50	I think it depends. I don't think I'm doing many tasks.						

P09	15:35:54	like that. I mean, I do this so like I look at a lot of biological data sets, so I don't know how useful this would be for that. And those are quite complicated, and they have their own Apis. So.							
P09	15:36:08	like their own Python Apis that I use rather than using something like this. So I don't think I would use this frequently.							
P09	15:36:18	I found the system unnecessarily complex. Parts of it, yes, but I think it's just because it's like maybe the first time I'm using it.							
P09	15:36:31	System is easy to use. Um... I think I'm going to give that to okay.							
P09	15:36:40	need the support of a technical person. I don't. I don't necessarily agree with that. I think.							
P09	15:36:47	just like getting used to the tool. various functions in the system were well integrated.							
P09	15:36:56	Yeah, I think so. Too much inconsistency.							
P09	15:37:05	neutral. learn to use the system very quickly.							
P09	15:37:13	I think, yeah, probably over time. I found the system very cumbersome to use.							
P09	15:37:21	It was a little bit hard for me to figure out, I think. I feel very confident, not yet. I needed to learn a lot of things before I could get going with the system.							
P09	15:37:34	No, I think it's... difficult.							
P09	15:37:39	Okay. Okay, so now we go to test 2. Okay, so do you need to? Oh, yeah, I need to switch model, but like other than that, there's.							
P09	15:37:50	But yeah, we can just click, because these are also not providing any. Okay.							
P09	15:37:55	Okay, you're a data analyst for public health. Okay.							
P09	15:38:01	Your team monitors water quality. You're investigating whether rainfall is associated with higher contamination levels to help inform decisions about when to increase monitoring or issue public advisories. Okay.							
P09	15:38:16	Examine freshwater beach exceedance rates, and rainfall from 2020 to 2023. Do they show me the same overall trend? Increase, decreased together across the years?							
P09	15:38:32	Okay. Um... Okay, so...							
P09	15:38:47	Um...							
P09	15:38:53	Examine freshwater beach and rainfall. Yeah, so can you... Retrieve data about.							
P09	15:39:06	and. plot them again. Can it do plotting? Should I not do plotting? I think for those questions, I guess you just explore, because I... Okay. Yeah, if you run into issues, then you run into issue. If you don't run into issues, then you stayed and plot. Okay.							
P09	15:39:25	pop them against each other to determine the correlation.							
P09	15:39:34	Is that what it wants me to do? Higher contamination.							
P09	15:39:42	I don't know what fresh water beach exceedance rates are. Is that what contamination is?							
P09	15:39:50	I assume so. I'm gonna assume so. Plot them against. Okay, see what this.							
P09	15:40:10	I guess I could Google that, too, right? Fresh water exceedance.							
P09	15:40:40	Okay, I guess. Not sure.							
P09	15:40:52	Oh, there's a nature water. Didn't know that.							
P09	15:41:09	It's complicated.							
P09	15:41:20	Global exceedance due to human withdrawal. enabling.							
P09	15:41:28	Okay.							
P09	15:41:49	Oh, your computer is almost out of battery. Yeah. Fyi. It's not there yet, but... Yeah, yeah, maybe, like, when you, like... After this, yeah. Yeah, yeah, I will, yeah.							
P09	15:43:44	Okay. Here's what the data show months with valid data is 28. Okay, correlation.							
P09	15:43:57	Oh, so it picked one station, it looks like share of fresh water beach samples.							
P09	15:44:04	that exceeded... the bacterial limit is very close to 0. Within this period, there's no discernible linear relationship between how wet a month is and how often.							
P09	15:44:19	Okay, data used? Would you like month by month?							
P09	15:44:25	Let's and let's look at the Oh, yeah, in this condition. There's no sapphire. Oh, there's no. Okay, got it.							
P09	15:44:34	Okay. Okay, well, if they increase and decrease together, we would see a correlation. So I'm going to go with false.							
P09	15:44:45	This is... oh, my answer versus the system answer. Okay.							
P09	15:44:52	Yeah, I think it's also false. How confident. I'm pretty confident this time.							
P09	15:45:00	I don't see how rainfall is correlated to pollution.							

P09	15:45:08	Okay. Should maybe be the opposite, I guess. How ready would you be able to act?						
P09	15:45:16	I don't know, I think in this case, because we didn't see all the stuff on the side, I'm less I would like to, you know, analyze what it did.						
P09	15:45:27	Okay, so... I... Ask the system.						
P09	15:45:35	To retrieve... data within the year range.						
P09	15:45:41	and determine Luke Pearson correlation.						
P09	15:45:50	between the two variables. because it was close to 0.						
P09	15:45:58	This means... The variables are not... linearly correlated.						
P09	15:46:07	Although... Let me... You know, linearly.						
P09	15:46:16	Okay. I trust. I don't trust it as much for sure, because we didn't get the sidebar. Okay.						
P09	15:46:26	So this is a different system. So I'm supposed to evaluate it differently. Okay. And that's like the final page. Okay. Been here forever. Okay, okay, I think that I would like to use the system frequently.						
P09	15:46:39	I definitely, I mean, I prefer the other one. So unnecessarily complex. No, I didn't find it complex. Oh, sorry. No.						
P09	15:46:49	system was easy to use. Yeah. Don't need the support. Um... I found the various functions in the system were well integrated.						
P09	15:47:02	Are there any other functions I should look at? Let's see.						
P09	15:47:06	And the other thing are more like originated from web UI. So I guess all the things is more about like maybe in your chat and chatting. But like you can receive different kinds of responses. I see. I guess I didn't do it too interactively.						
P09	15:47:24	But based like but like, I guess in terms of the interaction, it's primarily chatting. Right. Okay. Got it.						
P09	15:47:30	So yeah, I guess so. Too much inconsistency? No.						
P09	15:47:38	Most people would learn. Yeah. No, I didn't find it cumbersome. I felt very confident. No, I didn't really.						
P09	15:47:48	I needed to learn a lot of things before I could get going.						
P09	15:47:53	No. Um... No, I think... Yeah, I think the first system.						
P09	15:48:04	was... I felt more confident in because of the... the table on the side. So.						
P10	15:56:34	Okay, so I finished reading the 1st question, and I'm going to.						
P10	15:56:42	open the... Okay, so here is the system. I need to do one more thing. Just like just like.						
P10	15:56:51	Okay. Yeah.						
P10	15:57:02	And yeah, you can make. Go ahead. So, I see a... chat box. So the first things I'm going to do is.						
P10	15:57:15	Hoping and place everything into the chat box. But I will add something here to help. It's to understand.						
P10	15:57:25	What should I do?						
P10	15:57:33	I will try to 1st maybe answer my question.						
P10	15:57:37	First.						
P10	15:57:53	I can see the... Al, what should I call it? Like it is thinking something, but actually I cannot really.						
P10	15:58:02	quite understand what is the process. And in the next sequence of actions.						
P10	15:58:11	I think I'm a little bit confused. What is the sequence and what is the action?						
P10	15:58:18	And it says step 2 up to 10. So I think they will take eight more actions.						
P10	15:58:28	I guess. Yeah, now I'm just like waiting it. And.						
P10	15:58:35	I will go back to the survey and see what should I answer.						
P10	15:58:41	Your answer system also completed.						
P10	15:58:48	Oh, maybe, okay.						
P10	15:59:28	Okay, it's still processing. I have a question. So for the each question, can I search online? Yeah, you can do whatever you want. Okay, just like finding the answer. It's the only purpose. Yeah, you can do whatever you want. Yeah, yeah, just like basically how.						
P10	15:59:44	Okay, okay, I see, so I will then search online.						
P10	15:59:49	Uh... Fresh water big ceremony.						
P10	16:00:03	I'll try first use these keywords, but I think it's too long.						
P10	16:00:08	Hmm, there is an AI overview. Okay. Fresh water is coming in.						
P10	16:00:24	And here is any report. and go back to check if I can upload any file. Yeah, I can.						

P10	16:00:33	Then probably I will download. This file.						
P10	16:00:41	Hmm... Prices 2024.						
P10	16:00:46	So I'm not sure. Do they have the previous year's data? Probably they have. So I searched. Oh, I see it.						
P10	16:00:55	Right here.						
P10	16:01:23	I will download it first.						
P10	16:01:41	another question. I use ChatGPT if I want? Yeah, I have a pro. You can just use it. Okay, use yours. Yeah. Okay.						
P10	16:01:57	Uh, I have a file to it. Hmm... What is this? We don't know.						
P10	16:02:11	Okay, well, sorting by the date at this. Right?						
P10	16:02:17	No? Just try to find where is the.						
P10	16:02:24	Uh, 5. Okay. It's here.						
P10	16:02:32	and this feeling of answer. So the... following question...						
P10	16:02:45	Okay, it gives me the answer. Here are the year by year result after filling any missing monsterring value with the station.						
P10	16:02:58	Oh, and it shows the data. That is really cool. I like this. And it's really simplified. It's not like a fancy.						
P10	16:03:08	table with too many things. I can like really easy to direct.						
P10	16:03:18	Answer your question according... So, yes, we think the 4-year window hiring, huh?						
P10	16:03:28	Okay, cool. So the system's answer is true. And then I'll go back to the PDF. Chat Gpt says this can partly support.						
P10	16:03:41	Old PDF cannot run missing. So, the best direction answer is yes for a high level. Okay. It also gives me. Yes.						
P10	16:03:53	and there's too many. terms in the Pdf. I don't want to figure it out myself, so I will also select true.						
P10	16:04:03	Uh, how confident are you that the system answer is correct?						
P10	16:04:08	Actually, I'm not sure. Let me go back to see. Yeah, although it gives me the.						
P10	16:04:16	table, but I cannot see... Where they find the data. Can I?						
P10	16:04:26	Um, yeah, I think I cannot... Find the link.						
P10	16:04:31	So probably I will say 4 already. Would you be to add on this result to make decision?						
P10	16:04:41	informing public health advisors. Um, not sure, still missing the citation, so I'm not.						
P10	16:04:52	Quite sure should I use it? Briefly describe how you arrive your answer, what step did you take, what information?						
P10	16:05:02	I search for the... Keywords.						
P10	16:05:13	Freshwater Beach.						
P10	16:05:19	1st and find a Pdf about that. Then I ask chat.						
P10	16:05:31	I I. give the PVF.						
P10	16:05:35	ChatGPT. in ask it can.						
P10	16:05:42	Have to... Oh, classrooms.						
P10	16:06:02	For the system recommendation decision.						
P10	16:06:11	Okay, so... I think I would want to use the system frequently.						
P10	16:07:30	This doesn't give you any useful information, just that you should switch model.						
P10	16:07:38	Oh, okay. Yeah, there's another one. So now I'm a data.						
P10	16:07:54	response to the cyber can. Open view, you can follow this instructions to open it.						
P10	16:08:06	Okay, so I I'm not sure if it will take lots of time to generate answer.						
P10	16:08:14	So what I will do is, before I read everything, I'm going to.						
P10	16:08:20	Give it to. the system first, and then I will read it.						
P10	16:08:26	Your total, your team analyzed forward.						
P10	16:09:21	I'm trying to find a sidebar. Yeah, so you're basically it says like after each response. I see. I see.						
P10	16:09:44	That's really hard. I have no idea of this topic. So I will ask Chat for my answer. I'm not.						
P10	16:09:54	The Malero was this El Puck. crucial.						
P10	16:10:03	Let's quiet way and how. You'll find the answer myself.						
P10	16:10:22	I'll go back to Chuck. Oh, it has the answer.						

P10	16:10:28	Oh, it gives me the answer directly and I can check.						
P10	16:10:32	The thinking process, I guess. Okay, so I will read it.						
P10	16:10:38	Identifying review data. And it has something said legal.						
P10	16:10:46	which I guess... is proved.						
P10	16:10:51	In some way.						
P10	16:10:58	But I don't know where it got approved. Maybe the source.						
P10	16:11:02	because it. includes the source. So it's legal.						
P10	16:11:10	The data set or... So let's go through the federal trade.						
P10	16:11:19	Okay. Yeah, I like the description, because actually, if it only shows me the sources.						
P10	16:11:28	I need to go one by one to see it.						
P10	16:11:35	Hmm... What is the back bottom?						
P10	16:11:40	Oh. I see it's opened the table.						
P10	16:11:46	Oh... So there are all the data from... The article...						
P10	16:12:02	Yeah, I like it how it can. has a CSV downloaded, and all the table, and also the graph.						
P10	16:12:15	Um, but I'm not really quite familiar with that topic, so I'm not sure.						
P10	16:12:21	If they are... Good enough. But I feel like it's good enough. It can.						
P10	16:12:28	convince me. And the next part is preparing the data. This section shows houseworth data was used to prepare for the target table.						
P10	16:12:39	So it's time to play one operation to prepare the data.						
P10	16:12:44	Hmm...						
P10	16:13:00	Is this one something that shows before? So I search for payment.						
P10	16:13:10	This section shows houseworth's data was used to approve.						
P10	16:13:21	I'm still trying to understand this sentence.						
P10	16:13:33	Okay, never mind. I will just like go ahead to see you. Where are they?						
P10	16:13:41	Oh...						
P10	16:13:44	Oh, cool, and also has expand code.						
P10	16:14:16	I feel like this explanation is a little bit... I'm not sure.						
P10	16:14:24	Um... I feel like, at least for me is not... Really?						
P10	16:14:31	easy to understand. But I can get with the point.						
P10	16:14:39	From it was keep on with the column. I feel like I'm not sure if... That is good. I feel like it can be simplified. Maybe just see something. The table name.						
P10	16:14:58	dot and only keep. This 3 column. I feel like that that will be fine. Something like we will create a new table with all that information.						
P10	16:15:13	And yeah, and you show the table. So... Yeah, so I think... The shoulder table itself is clear.						
P10	16:15:27	insert as target table script. Oh, and I noticed that there is a check mark here. Also check mark here.						
P10	16:15:36	Checkpoint here. Oh, I know. So it's detective. I expanded or not, I guess. Yeah.						
P10	16:15:45	Yeah, so so if I close it, so it can be like a mark.						
P10	16:15:52	To see if I check it, to remind me to go through everything.						
P10	16:15:56	And so the system constructed the target table and generate a Python script to produce a result, and we can show the target table.						
P10	16:16:06	Show the Python script. That's why I didn't never click download. So this time I will download it.						
P10	16:16:17	Oh. Okay, cool.						
P10	16:16:26	Number of reported as such as payment method, type of payment method.						
P10	16:16:32	Yeah, I like the description. Number of report payment method, total USD lost.						
P10	16:16:47	Yeah. So here is generating the final answer. The script run on the target table form, and we can run it now. Okay.						
P10	16:16:58	Wait, but where is the script? I mean, where's the food?						
P10	16:17:07	Oh, I'm a little bit lost. But I know there should be something. Maybe I miss it?						
P10	16:17:22	Or it didn't. Show me the... Full script.						
P10	16:17:28	I hope there is an easier way here. Show the whole script.						

P10	16:17:37	Maybe I understand it's not correct. But yeah. Yeah, so I will copy the answer.						
P10	16:17:46	to the... 4.						
P10	16:17:50	The campus the most relevant part. I'll go back to ChatGPT to see what is my solution.						
P10	16:17:59	In plain English or trying to answer if we add up, I lost no matter how.						
P10	16:18:07	for sure. And it also gives me the citation.						
P10	16:18:24	Um, somehow don't want to read it. I would trust the answer, or I will ask you again.						
P10	16:18:33	Hmm.						
P10	16:18:39	How to question it, Luke? Um, can you confirm it again?						
P10	16:18:49	Is it...						
P10	16:19:08	Okay, this is not confidently. That's interesting.						
P10	16:19:15	Hmm... but it's still around... 12,000.						
P10	16:19:27	Hmm...						
P10	16:19:46	But I will just keep it here. How confident are you in the system once you've scrapped?						
P10	16:19:54	Hmm... let me go back to the source. I feel like everything can convince me, especially the process of analyze the data. I feel like that is... the AI.						
P10	16:20:08	Like it is good at. With some existing source information, and they can analyze it. But for the.						
P10	16:20:17	Where is it collected? I'm... Still questioning.						
P10	16:20:25	Well, it gives me the situation, so it probably should be correct.						
P10	16:20:31	But I will still select 4. Already would you be toward that?						
P10	16:20:49	I'm not confident, because I didn't check the citation and I don't understand ChatGPT's thinking process.						
P10	16:21:02	Oh, wait, is that you have questions asking like where is the system right? Yeah. Oh, okay, okay, I see. Then I'm more confident. Okay.						
P10	16:21:14	Oh, you're a rough answer.						
P10	16:21:59	I guess I should interrupt, because otherwise I would require just but like, yeah, I guess, like for your answer is like what you believe the answer to be.						
P10	16:22:10	So, oh, gosh. Like, if you believe ChatGPT more, then you can. But like, I guess like the reason that I'm seeing this is just like for your process, or maybe like is still fine, like if you just like.						
P10	16:22:28	put like, what do you work out the other way as your answer? But like, maybe like for the steps you took like maybe like trying to both record your feeling about the system answer, and like what you did with the system. So so it's like the system is also.						
P10	16:22:44	Maybe it's just like this question I was just, like, trying to capture, like, like, your experience, like, as a whole, but, like, if you're only, like, I see, I see. I probably wouldn't miss.						
P10	16:23:01	like the information you had with the chapter. So maybe just like talk a mix of both. Yeah, yeah, I see. And I'll forward my answer, if ChatGPT is like different from the system, and if I believe in the system, should I put the systems up? It's your like own judgment. Yeah, yeah, it's like, just like whatever you want. I see I'll do it.						
P10	16:23:24	We must work on some other way. I see. Yeah, but it's more so like because of qualitative response. Like, not, like, missing. Yeah, yeah, yeah, I understand. Yeah, don't worry, don't worry, I understand that now.						
P10	16:23:40	Uh, so I'm first copy-paste the question to the system. It takes time. So I.						
P10	16:23:53	Oh my gosh. Mm-hmm.						
P10	16:24:05	Hmm... it... quickly gets me... Answer...						
P10	16:28:30	Oh, for the table relevance feedback, I actually didn't.						
P10	16:28:35	See that part? Yeah, since that point I I will tell you, because it doesn't make a difference, just like in step one. Okay. If like you go back to the.						
P10	16:28:50	Hmm. Like, no, I mean, like, if you scroll down a little bit, when you see the sample table, if you go back.						
P10	16:28:58	And then you can select edit. Yeah. Oh, I didn't see that. That's really cool. Okay.						
P10	16:32:02	This is the final one. Mm-hmm.						
P11	16:44:07	Uh, we would give you two tasks, and then you would do some evaluation. So, like, when you, like, perform the task, maybe imagine you are really in that role, and also, like, um, yeah, it's like, how would you solve that task if that's really your task? So, say, if you need to search online, or if you need to download something.						

P11	16:44:26	There's also something downloadable on our platform or just like whatever you want to do. Just feel free to do so. Like, although this is my laptop, but I don't mind. But like also I didn't close everything. But as long as, like, they are not.						
P11	16:44:43	On your way, I don't mind if you say anything but just like yeah but like if you need my help to navigate to something, you can also let me know. I'm a little bit confused, so there's going to be some task for me to do, and you want me to use the AI you built, right?						
P11	16:44:58	Yeah. Where is the AI you'll be able to use? Yeah, it's here. Yeah, I think it's also on the instruction. So maybe, like, when you read the instruction, you would also be less confused. But also, like, if you need additional help online or something like you can.						
P11	16:45:14	Feel free to do so. Okay. Sounds good. So it's time to start. Yeah, yeah, yeah. Okay. Okay. Check like one more thing yeah I I just want to make sure I also have the.						
P11	16:45:28	Oh, yeah, I do have the transcript. So it's all good. Yeah, just.						
P11	16:45:33	Yeah, feel free. Yeah. Okay.						
P11	16:45:40	We have completed a total of 2 tasks using our system to explore the data and answer a set of questions. Each test case typically takes 7 to 15 minutes to complete. Please take your time and submit your answer when you're ready.						
P11	16:45:53	To complete the test, please explore the data using the system. Submit your final answer in the requested format. Rate your confidence in your data. Briefly explain how you arrive at your answer.						
P11	16:46:08	If you are unsure about an answer, you may select not sure.						
P11	16:46:12	Please access the system using okay. Are you currently using task 1 logging credits. Oh, yeah, yeah, that's the part that you don't have to worry about. Okay, I will just go next. Okay.						
P11	16:46:27	You are a data analyst at the Federal Trade Commission.						
P11	16:46:33	a US government agencies that tracks and investigate consumer fraud. Your team analyzes customer fraud reports from the FTC portal which complies.						
P11	16:46:47	Complaint submitted by consumers across the US, you are estimating the total number of money lost to Freud's to quantify the overall financial impact and inform enforcement priority.						
P11	16:47:04	Okay, question. Using the system determine the total number of money lasted to fraud across all payment method.						
P11	16:47:22	So the data is inside the system, right? Yeah. The system have like like access to a lot of data like you can think like the the system have access to the data in your organization. Okay, okay, sounds good. And like one clarification is like for your answer is what do you believe the answer to be, right?						
P11	16:47:42	It could be like it just like what you believe the answer to be. It doesn't have to be you saw it yourself. It just have to be like, what do you think the answer is? And the system answer is like, what do we turn by the system? Okay, what is answer in the system? I see.						
P11	16:48:20	Oh, this is good.						
P11	16:48:29	No, this is not control C and control we works. Okay, sure.						
P11	16:48:36	Control C. Oh, okay. Oh, yeah, it's a Mac. So so so like it's not Windows. Oh, it's command C. Okay. Yeah.						
P11	16:48:43	Yeah, I also do country sometimes. Okay.						
P11	16:48:56	I am investigating. Um...						
P11	16:49:07	Just kidding. Customer Freud report from VC1.						
P11	16:49:24	Total amount of money.						
P11	16:50:17	Hmm. It's already taking quite a while, too.						
P11	16:50:24	To show the data.						
P11	16:50:44	terrorizer.						
P11	16:50:50	In the next sequence of action.						
P11	16:51:38	It's a big jump in reporting loss to fluid.						
P11	16:51:42	12.5 billion in 2024. So the data need to be close to this one.						
P11	16:51:50	Okay, so the AI answer is that across all payment method, consumer reported lastly roughly 5.4 billion to Freud.						
P11	16:52:01	Okay, so the source is that FDC voice report payment table, which.						
P11	16:52:07	Total. It's a dollar loss for each method and cover report received during in 2024 release figures.						
P11	16:52:19	Okay, let me know...						
P11	16:52:23	Okay, I just... Who caught it, and I find... Uh... different news.						
P11	16:52:38	Website here...						

P11	16:52:50	Okay. What is, uh...						
P11	16:52:58	built in... Lots.						
P11	16:53:04	different from what's use this. What's... It's your... Resource.						
P11	16:53:24	Can you calculate it?						
P11	16:53:51	Okay. 2.68 million reports failed.						
P11	16:54:04	Particular increases. Total of... Imposter skin, that's something different.						
P11	16:54:17		248					
P11	16:54:22	Okay, here's exactly where point 4 figures come from data source.						
P11	16:54:30	So there's a public data book within the workbook, the tape called Freud reported by payment message listed well.						
P11	16:54:39	to each payment. Reported for example, looks like credit card.						
P11	16:54:48	Pegulations tribute.						
P11	16:54:54	some other role. Why do the press says 12 point?						
P11	16:55:08	Many reports listed a dollar loss, but live payment method.						
P11	16:55:23	Where the payment method field is presented. All reported, regardless of the payment method.						
P11	16:55:55	Microsoft Chinese...						
P11	16:56:02	So...						
P11	16:56:08	and turn.						
P11	16:56:14	Okay, so I enter 12.5 billion, or shall I use a different one? So it seems the 12.5 billion is the right way, because it's regardless of how the payment method is recorded.						
P11	16:56:31	We want some amount that explicitly attribute it to payment method.						
P11	16:56:38	Summing every row when a payment method is recorded, the latest.						
P11	16:56:43	add up to about 5.4. It's larger because included losses with no payment method was specified. Okay.						
P11	16:56:56	If your cells is meant to capture lost broken by payment method.						
P11	16:57:02	If... It represents all the reported garage loss, regardless of payment method is giving.						
P11	16:57:39	Which answer fits better with Austria.						
P11	16:57:58	insults.						
P11	16:58:07	The prompt says total number. in this thing.						
P11	16:58:11	Provided the total is above. To figure encoding programs.						
P11	16:58:20	This goes beyond across the payment method. So is your cell is going to capture loss when payment method is recorded.						
P11	16:58:30	Hmm. Okay.						
P11	16:58:37	in a million of dollars. Give me the number.						
P11	16:58:45	in... as an integrated.						
P11	16:59:07	Already, would you be hacked on this resource to make a decision on your trials?						
P11	16:59:16	Briefly describe how you answer. What steps did you take?						
P11	16:59:24	Firstly, ask AI directly. Put the results... Secondly, check online.						
P11	16:59:37	And the media. Press to see if it is consist... Tense.						
P11	16:59:48	If not... Assistance can ask AI why the results.						
P11	17:00:00	is not consistent.						
P11	17:00:08	Okay. Let me give me...						
P11	17:00:15	Also, if it's, uh... 12.5 key number as.						
P11	17:00:25	So integral.						
P11	17:00:37	Make my own decision. Let's see if I transferred it.						
P11	17:00:48	It's a. Yes.						
P11	17:01:18	Oh, this is the most relevant part to observe.						
P11	17:01:49	Can I press the whole answer to? Yeah, thank you. It's fine either way.						
P11	17:01:55	Okay.						
P11	17:02:01	Hmm. Next one. I think I would like to use this system frequently.						

P11	17:02:10	Yes, find this system unnecessarily complex. I don't think so.						
P11	17:02:19	I think this system is easy to use... Agree.						
P11	17:02:25	Kind of agree. I thought I would need to suppose of a technic person to use this system.						
P11	17:02:34	middle. I find the various function in the system where integrated.						
P11	17:02:43	Hmm. Not sure about what is a variance function.						
P11	17:02:50	As such, there is too much inconsistency in the system.						
P11	17:02:58	Okay. I should find a nice number. Not agree.						
P11	17:03:07	Don't find any inconsistency. Uh, the system argue for itself in a reasonable way.						
P11	17:03:14	I would imagine that most people will learn to use this system very quickly, which I kind of agree. I find this system very cumbersome to use. I disagree, find very confident, not super confident. I would still need to check it.						
P11	17:03:31	Online. I need to learn a lot of things before I can go get before I could get going with this system.						
P11	17:03:43	Hmm... Not sure.						
P11	17:03:47	Okay. Oh, yeah, participants. You can just skip. This is not telling any information. It's just like telling you we should switch model. So we are going to change to a different one. Okay.						
P11	17:04:04	Um, yeah, data analysis as Massachusetts Department of Public Health. Your team monitor water quality at public swimming beaches.						
P11	17:04:15	You are investigating whether the recent rainfall is associated with high contamination level to inform decisions.						
P11	17:04:23	The rainfall is associated with high contamination levels to help inform decisions when to increase monitoring the issue public advisories.						
P11	17:04:37	Using the system exams fresh water beach exceedance rates and range from 2020 to 2023.						
P11	17:04:50	Do they show the same overall trends?						
P11	17:05:01	Increase or decrease together. If any value is missing, replace them with a median value for the same month calculated from years, where.						
P11	17:05:11	Data is available. Each time you receive a sidebar can open for view.						
P11	17:05:21	You can follow this instruction to open it.						
P11	17:05:31	Yeah, maybe this part is not super like I can just let you know it's just like each time you receive a response. There should be a bar like ideally, we would fix it to the side. But like, because there are some like integration issue with web UI. So like.						
P11	17:05:46	You have to manually click something on the right to open the sidebar like each time. Okay. So it basically just says that. Okay. Yeah. And I can also let you know where to click. Just see.						
P11	17:06:05	Okay, see. Um, I need to delete using the system when entering the AI.						
P11	17:06:15	Question for you.						
P11	17:06:21	Okay.						
P11	17:06:38	I also... system answer. So it's only answering exam freshwater beach extensible. Do they show the same overall trains?						
P11	17:06:51	exceedance rate.						
P11	17:06:57	I need to check it online and see the... Messages.						
P11	17:07:05	Department of Public Health.						
P11	17:07:18	Hmm.						
P11	17:07:40	Overall and just storm rover. Okay.						
P11	17:07:47	I'm taking a while. Spring for impact.						
P11	17:07:54	Recent ring forcing is consistently identified as the most critical factor in elevated bacterial level.						
P11	17:08:07	So the cross train is also answering. Exam the fresh beach exceedance rate and rainfall increase or decrease together across the year.						
P11	17:08:22	Common cause of accessories, including stormwater rain up.						
P11	17:08:56	Here I find it. It's a historical relationship between rainfall amounts and exceedance rate adds a marine and the.						
P11	17:09:08	be freshwater beaches. Okay, so the question is saying...						
P11	17:09:19	exam freshwater beach excess rates. Okay, freshwater beach. So it's going to be the B freshwater, and the result is asking from 2020 to 2023.						
P11	17:09:36	Okay, it is not 2021.						
P11	17:09:43	Okay. 2026. Okay. I need to find such a message.						

P11	17:09:51	Beach test reporting results, annual reports. Alright, 2025... Oh.						
P11	17:10:04	Oh, I think the question asking. Okay. We have access to. Okay.						
P11	17:10:15	I see. Okay.						
P11	17:10:21	Oh, here. Okay, nice. So... Fresh water.						
P11	17:10:31	Okay, cool. So from 2020 is here.						
P11	17:10:41	2020 is cute. Okay, here. 2023. Okay. Increase, decrease.						
P11	17:10:52	Increase decrease. Okay. It's pretty pretty consistent.						
P11	17:11:01	Okay, there's only one inconsistent point which was on 2020 2019.						
P11	17:11:09	2019, 2019 is here. This window. 2020, 2021, 2022, 2023. Okay. 2021, 2022, 2022.						
P11	17:11:25	2022 is here. This point, this points... This is... this is 2020. There is one point that is inconsistent.						
P11	17:11:41	at the starting of 2020. It's a ring 4 amount goes down, and the starting at the end of 2020.						
P11	17:11:51	2021, the six season thread that goes up. So let's look at what AI says.						
P11	17:12:00	Also, yeah, maybe make sure you see the sidebar before proceed 1st sidebar. Okay.						
P11	17:12:12	Okay, I've set up pipeline to compute the annual exceedance rate.						
P11	17:12:18	Suppose for 2020 and 2023 with median base imputation for missing months.						
P11	17:12:25	I was summarizing around the script to see whether these two move in the same direction.						
P11	17:12:33	Okay, cool.						
P11	17:12:47	It's a script. Okay, execute it. Oh, there's some arrow. Yeah, we just let you know, just like it would be corresponded to the response. So if the response haven't proceeded to calculation. Okay, okay.						
P11	17:13:05	Okay, please proceed.						
P11	17:13:40	can use all the tools. Do you mean? Yeah. Okay. Can I use like PowerPoint?						
P11	17:13:46	PowerPoint. Yeah, like slice, whatever. Yeah, yeah, yeah. As long as it's available. But like.						
P11	17:13:54	There is a PowerPoint. I think there's a PowerPoint.						
P11	17:13:58	These things are like here. Keynote. Yeah, yeah. Oh, yeah, yeah, yeah. And if it's not working too well, you can also try the Google one new documents. Okay.						
P11	17:14:15	Alliance. How to how to take a screenshots of it?						
P11	17:14:22	Let me headway because I kind of like remember how to do it, but I don't.						
P11	17:14:28	Oh, yeah. I just remember where to touch. Okay.						
P11	17:14:37	Yes, can capture. Thank you. and just check there. Okay.						
P11	17:14:46	Okay.						
P11	17:14:55	Okay. screenshot...						
P11	17:15:09	The expert did line. Who are you?						
P11	17:15:18	Okay, find the 2020 beginning of 2020.						
P11	17:15:31	Yes, that's vertical line. Okay.						
P11	17:15:36	Late on his way...						
P11	17:15:43	Okay.						
P11	17:15:48	Okay. Up and down, up and down. Okay.						
P11	17:15:54	Pretty sure it's consistent. scripts. Okay.						
P11	17:16:05	Yeah, I'm fine.						
P11	17:16:36	Operation force whether the bacteria exceeded or regulated.						
P11	17:16:54	In this course.						
P11	17:16:59	Wait for the system.						
P11	17:17:07	It's... Describe how you arrive at your answer. What step did you take? Firstly, ask.						
P11	17:17:17	Copy. has sent the data to AI and ask AI.						
P11	17:17:27	opinion.						
P11	17:17:32	Seconds will go. Online... To see if I can find... Uh, online data... And, uh... Governments... Organization... Cert, check... applied.						
P11	17:18:03	and is their data. Let's see. Yes.						
P11	17:18:10	Answer some questions. Find.						
P11	17:18:17	So is, uh... A small...						

P11	17:18:27	inconsist... tendency as a February beginning.						
P11	17:18:33	of 2020s, so... So, service.						
P11	17:18:44	C, see... Services.						
P11	17:18:55	Series.						
P11	17:19:03	Those year by year conversions sites wide pressure at most 10 station across.						
P11	17:19:11	after 2020 basis incidence rate and rainfall move in the same direction each sequence here both race in 2021.						
P11	17:19:20	falls in 2022, Rose began in 2020. Three stress data brought year to year association. Rainfall is taken from Boston monthly series, which may not perfectly reflect condition at all.						
P11	17:19:37	First we'll just start using a total annual annual participation masking should turn stormy effect. Final resolution could repair stronger or weaker relations. 12.						
P11	17:19:50	down into specific regional beach using a high frequency data.						
P11	17:19:56	access the short-term impacts. Let me see. Explore regulation teams. So what is your answer?						
P11	17:20:09	Another thing I need to remind you is that like, maybe, like, make sure to say like sidebar each like response. What do you mean? Sidebar each response like trying to check side by also like every time you.						
P11	17:20:25	ask a new question, like the information would be lost like on the sidebar. Oh, the information will be lost. It will be updated. It's not necessarily lost. Okay. But, like, just let you know.						
P11	17:20:37	Okay. I see.						
P11	17:20:41	Hmm.						
P11	17:21:00	Same over all trend course to use.						
P11	17:21:21	So what is?						
P11	17:21:26	I'll search culture.						
P11	17:22:19	No, sir. Across a new freshwater beach and raise a total annual.						
P11	17:22:26	move me in the same direction each year after 2020.						
P11	17:22:30	altogether. So 1 year to one year basis is two series shows overall the same trend.						
P11	17:22:37	Yeah, rainfall is from Boston, I know it captures that wide variability.						
P11	17:22:43	Seeing annual total loss mask short-term effects. So, let me see, go to the answer to the question. Do they show the same overall trend across the years?						
P11	17:22:59	It is constraints are a little bit ambiguous. Hmm.						
P11	17:23:08	If compared years... Two years... Please let's compare yes to yes.						
P11	17:23:19	Oh, sir. is true.						
P11	17:23:25	If you look at the finer months. Answer is... no.						
P11	17:23:35	Okay. And 5.6 that be consistent?						
P11	17:23:54	6... up, down, up.						
P11	17:24:02	Up.						
P11	17:24:09	up, down, up. So the highest can go to 6.5.						
P11	17:24:16	Lowers can go to like 4.5 or something. Okay, it's pretty good. Pretty good.						
P11	17:24:28	pretty confident. How ready would you be able to act on these results to make a decision job?						
P11	17:24:37	Pretty confident. You're ready. I trust the system recommendation. Not sure if I fully trusted.						
P11	17:24:47	Because it's cross-chain is a bit ambiguous. That turn.						
P11	17:24:52	Data context. Oh, this is all the features available on the sidebar. So it's basically asking you to read the usefulness of each feature. Oh, how useful it is. Okay.						
P11	17:25:08	Yeah.						
P11	17:25:15	This is... this is too dense. I think it is a better way to make it.						
P11	17:25:21	Um, nicer, so I can click something. The table preview.						
P11	17:25:29	Which name, pitch type, community, etc. I don't think that's useful.						
P11	17:25:37	Table relevance feedback relevant, relevant. That's useful.						
P11	17:25:45	Table Summary statistics. beach...						
P11	17:25:55	Oh, what is this? Country code, county code.						
P11	17:26:02	No. It will be useful to somebody operations tab description.						
P11	17:26:14	No. Operation diagram.						

P11	17:26:21	No code snapshot. No. Who's explanation? No.						
P11	17:26:31	Don't need to explain the code. both direction.						
P11	17:26:45	Not sure. System navigates identify relevant data, prepare the data. That's helpful step description step description.						
P11	17:27:01	Not sure. Code editing.						
P11	17:27:07	Don't want your eyes to code. scripts.						
P11	17:27:13	description. Download files. I think that's helpful. If there's anything, would you like to share about the experience using the sidebar?						
P11	17:27:28	Okay, sidebar function.						
P11	17:27:48	Details. Too much.						
P11	17:28:01	Beautiful. That's okay.						
P11	17:28:11	Okay. 7 5.						
P11	17:28:16	So it's details.						
P11	17:28:21	Since this... I think I would like to use this system frequently. I think this system unnecessarily complex. I agree.						
P11	17:28:31	I saw the system easy to use. I think I would need the support of a technical person to use the system.						
P11	17:28:41	I agree. I find the various function we are integrated.						
P11	17:28:47	Uh, neutral. I think there's too much inconsistency in this system.						
P11	17:28:54	not agree. I would imagine most people learn to use this system pretty quickly. I disagree very cumbersome. Confident using this system neutral.						
P11	17:29:09	I learned a lot before I could say. It's going with the system.						
P12	17:40:42	Okay, so I am first asking it to show me what are the data collected in the data sets. For example.						
P12	17:40:53	I don't know if... He has water quality... some kind of level to indicate water quality and.						
P12	17:41:07	Um... If it has also... How much rainfall?						
P12	17:41:17	has happened in that year. Sorry, just in general, getting to know about the data set.						
P12	17:41:26	So I'm going to ask, give me an overview of the data sets.						
P12	17:41:35	Okay.						
P12	17:41:56	Oh, am I supposed to just copy-paste the question?						
P12	17:42:00	Or it's up to you. Oh, okay. Like, when you receive the task, you're trying to do something, so... I see.						
P12	17:42:08	Okay.						
P12	17:42:15	I'll also let you know like that your answer and system answer. The system answer would be what's like you think like is like from the system like for such a monster. But for your answer is like, what do you believe the answer to be? So yeah, it's just like whatever you believe the answer to be.						
P12	17:42:32	Okay, so for system answer, I have to ask that question to the system to get that system answer. You just like copy the response from the system that you think.						
P12	17:42:43	Like it is answering that question. Oh, okay, okay.						
P12	17:42:50	Um... Okay, so it does have water quality...						
P12	17:43:24	What are the sidebar that you? Oh, this one.						
P12	17:43:28	Okay, okay.						
P12	17:43:48	And then I'm just going to use the data set to looks very.						
P12	17:43:55	big. So I'm just to... Going to simply ask, what's the correlation between water quality?						
P12	17:44:06	And... The amount of rent for... from 2020 to 2023.						
P12	17:47:43	Hmm, okay. So, um, I think... Um, this alarm give me an answer?						
P12	17:47:53	Then we calculate the correlation. And it's. positive and quite strong correlation point 8.						
P12	17:48:04	They also mentioned that the scale of the data.						
P12	17:48:08	So that data quality is... This goes smaller, stay twice.						
P12	17:48:17	While precipitation is from one state. Okay, okay. I don't really understand.						
P12	17:48:25	State... oh, they have quality. is an average.						
P12	17:48:31	Okay, and precipitation is just one just from Boston.						
P12	17:48:37	So, actually, this is not very reliable data set.						

P12	17:48:42	And also... Um, there's only... Okay, so these are annual observations.						
P12	17:48:54	So the time scale is also rough. So I will say, uh... Hmm.						
P12	17:49:04	Yeah, but they are saying is like the system have access to like your organization's like database. So that's kind of like always a data you've got for the task.						
P12	17:49:20	Yeah, I guess it just like I want to say like for we're citing the data source is actually a separate problem. Yeah, just like that's all the data that we accessed. Yeah. So it's like.						
P12	17:49:36	Not relevant to the LM's inference.						
P12	17:49:44	Okay.						
P12	17:49:49	and also like, yeah, it just like, make sure like.						
P12	17:49:54	Yeah, like, if you know how like, I guess is.						
P12	17:49:59	Let me think. The other thing is like, make sure to check that bar like, make sure like the sidebar is there for response. I guess that's.						
P12	17:50:08	the condition we are controlling. The sidebar.						
P12	17:50:54	Oh, there's even plot.						
P12	17:52:52	Okay, so I guess I have to. Can I just round it?						
P12	17:53:08	Okay. Oh, mm-hmm.						
P12	17:53:25	I guess this looks like an outlier. But also... There is only 4 data points.						
P12	17:53:42	I will say... my answer? Not sure. Hmm.						
P12	17:54:02	And I think the system is more reluctant to say yes.						
P12	17:54:08	I'm not very confident. I don't need to think out loud here. I'm just punching the number.						
P12	17:54:16	Hmm. Maybe not.						
P12	17:54:28	Intro?						
P12	17:54:44	Yeah, there's like an example here, just all the information available on the sidebar. Oh, okay. So I'm just evaluating if this is useful. Yeah, like this. Yeah, you can also find it on the sidebar if you want to. It's just like the textual context in this one.						
P12	17:54:59	Probably not, like, measure context.						
P12	17:56:10	just not as useful because... very abstract.						
P12	17:58:01	Do I need to log out? No, no, no, you can just put and that was Rachel model for SRS like writing. Yeah, I would just like switch the model. Oh, okay. Yeah, let's do a new chat.						
P12	17:58:18	Young.						
P12	17:59:11	Again, I'm going to... As for the overview of the dataset...						
P12	17:59:46	Okay, so this one doesn't have side view.						
P12	18:00:02	Hmm.						
P12	18:00:14	Okay. Not super helpful. I'm going to just... Ask the question.						
P12	18:01:03	data set. Should I... you know where I can find it? I think it has access to the entire database. I guess it's like you could hallucinate where it is like also it's just like there are some random use in terms of Lm. In general.						
P12	18:01:25	But like the model do have access to. like all the data sets in your organization.						
P12	18:01:35	So yeah.						
P12	18:02:13	I will say, because of that hallucination, I can already.						
P12	18:02:19	Uh... answer that I'm not as confident.						
P12	18:02:26	In the system, and I don't trust it. Very well.						
P12	18:03:08	Hmm, now just give me an answer. All of a sudden, um... So I'm going to ask it to.						
P12	18:03:31	Oh, we actually said they sum up...						
P12	18:03:38	the listed. Values.						
P12	18:03:43	So I will say the system answer is this one.						
P12	18:03:52	And... maybe I should ask year by year. Thanks.						
P12	18:04:01	away.						
P12	18:04:18	or by payment method.						
P12	18:04:24	But I don't see the table. So I will say not sure.						
P12	18:04:29	Because I can see the table.						
P12	18:04:38	For the assets.						

P12	18:04:47	And that's the final one. Okay, the final SUS.						
P12	18:04:57	Very... Simple but not.						
P12	18:05:01	Too simple. It's too simple.						
P13	12:38:33	Like maybe like when you were performing those tasks, think you are really in that role, like you are trying to solve the problem like yourself. And like maybe just take this as your computer if you want to search something, if you like, yeah, if you want to download something, if you want to do anything, just feel free to do so. Okay. If like some of my things are really on your way, then.						
P13	12:38:54	Yeah, like you can just like do it like, I think like you wouldn't like just like delete anything. I also probably saved everything. So it's not a problem. But it's just, like, if it's, like, too messy, really in your way, you just ask my help is also fine. Yeah, because, like, if you have any question.						
P13	12:39:09	Let me know, and if I cannot answer that question, because it influences the result, then I would let you know. Okay, sounds good. Okay. Yeah. Okay.						
P13	12:39:20	So I can just click yes on. Okay. Yeah, but there are some instructions. Yes, in addition to logins. Okay, so now I'm just reading the task description.						
P13	12:39:33	about my role at the FTC. And the context.						
P13	12:39:41	Um... about like data aggregation. So I need to check whether report counts are consistent across sources and identify discrepancies that could affect analysis results.						
P13	12:39:54	Okay. So I need to use the system to determine the number of frauds and other data records for 2024, and specifically the metropolitan. Okay, these 3 locations.						
P13	12:40:13	Okay, and now I'm getting an introduction to the system. So I'm going to go to the system.						
P13	12:40:21	Every time you receive response, the sidebar can be opened for view. Okay, so I think this is after I prompt it. Please confirm that the sidebar is visible before proceeding.						
P13	12:40:35	Is it this sidebar? No, I just let me do just also like one. Oh, I think I checked that. Oh, yeah, never mind. Oh, it's like each time you receive a response. Okay, okay. Yeah. So it's not always open. So that's why we said like.						
P13	12:40:52	Under... sorry, maybe, like, you can switch. Yeah. So like, you know, like when you use ChatGPT, there's like an addit where like regenerate operation. So like, it's kind of like at that position on the most right one is like the.						
P13	12:41:06	the sidebar. Okay, got it. Okay, sounds good.						
P13	12:41:15	Sorry. Okay.						
P13	12:41:20	Okay, so the data is already loaded. The system have access to your organizations like database. Okay? And yeah, the other thing is like for your answer is like.						
P13	12:41:34	as like what you believe the answer is. Okay. The system answer is like what returned by the system. Okay. Like, yeah, like, what do you believe the answer is doesn't mean you have to solve this yourself. Okay. It's like, what do you believe is, and you can solve it by yourself.						
P13	12:41:49	Okay. Okay, so... I think I'm going to just ask prompt it to give me.						
P13	12:42:00	the number of frauds. and other data records.						
P13	12:42:07	Okay, so I'm going to type my prompt, which is like... And uh...						
P13	12:42:21	data file, please find the. Number of... frauds... is okay, frauds and other data records.						
P13	12:42:38	for the year 2024. Across each of these three locations.						
P13	12:42:52	And then I probably want... this to be.						
P13	12:42:59	Okay. Yeah.						
P13	12:43:15	Okay.						
P13	12:43:25	Okay, well, that's generally. I'm just reviewing the context of the question to make sure that I am answering it correctly.						
P13	12:43:34	This aggregate.						
P13	12:43:57	Uh... Do I... it says, like, I don't... they don't see the data file.						
P13	12:44:06	Yeah, I guess just, like, facing the data relation, like, well, maybe like I but but like I can still tell you, like, you have access to. Okay, so I need to find it. I guess this is more so because like.						
P13	12:44:21	like the way you specify the question where like Lm kind of like there are still some like random news. So but like you have access to the data that should like answer the question.						
P13	12:44:36	Okay. Okay. Okay. Okay, so the way I should interpret this Lm response is that.						
P13	12:44:45	I didn't specify the file name correctly. That's why I'm suing.						
P13	12:44:53	Okay, so maybe I should just get maybe the 1st step is to just get the consumer fraud reports from the FDC portal.						
P13	12:45:02	Okay. So I will just edit this first prompt. So first, st please retrieve.						

P13	12:45:20	Would you... Uh, retrieved the... Broad reports.						
P13	12:45:30	Please provide.						
P13	12:45:38	Please provide the structure. You used to provide. a brief overview of the.						
P13	12:45:48	Reports contained within the portal. Okay, so I'm just... I think the goal of this message is to just maybe first retrieve the relevant data and to understand the structure of the data.						
P13	12:46:06	So hopefully that retrieves the data.						
P13	12:46:16	Okay.						
P13	12:47:14	Okay. So I see a snapshot of the recent.						
P13	12:47:20	Consumer Centennial network data. and the types are fraud, identity, theft, and other consumer issues.						
P13	12:47:29	I'll click the sidebar.						
P13	12:47:35	Okay? And so it shows me the retrieved. table that is only on the year 2024.						
P13	12:47:48	Okay.						
P13	12:47:52	I am not sure what Consumer Centennial network. I'm just gonna do a Google search. Okay, so I'm verifying that is part of the FTC.						
P13	12:48:07	and it reports the types of fraud that the question.						
P13	12:48:12	It's asking me about... Okay. So it seems like the system was able to match my general consumer fraud to just the specific consumer centennial network, which is good. So now I'll move on to the reported counts. So I'm looking.						
P13	12:48:33	for...						
P13	12:48:37	fraud and other data records. Okay, so...						
P13	12:48:48	I'm assuming other data records refers to other consumer issues. So now I will write.						
P13	12:48:56	a prompt. That's sales.						
P13	12:49:04	4... Fraud... and other consumer issues reports. Please find.						
P13	12:49:15	Please.						
P13	12:49:26	identify the total number of records or counts. For these three locations.						
P13	12:55:15	Okay, while it's generating, I'm just scrolling through the relevant tables that were generated in the previous.						
P13	12:55:22	Thing, just to get a sense of... What is being looked at?						
P13	12:55:38	It seems like there are specific tables that...						
P13	12:55:45	Cover the relevant. Oh!						
P13	12:55:53	Breakdown.						
P13	12:56:00	Hmm.						
P13	12:56:40	Okay, so it says that last year there were these many reports for those 3 areas.						
P13	12:56:57	So I want to.						
P13	12:57:04	Verify that this number is consistent for other records.						
P13	12:57:12	Where?						
P13	12:57:45	Okay. So now I'll just briefly scanning through the tables, and it seems like there is a discrepancy based on.						
P13	12:57:56	But this is identity theft. Okay, never mind.						
P13	12:59:09	Okay, so...						
P13	12:59:14	Select the row...						
P13	12:59:19	In the... 4.						
P13	13:02:28	Now I'm just waiting for the system to generate.						
P13	13:02:32	Okay, yeah. Yay. So now it's showing me the number of reports on the state level, but also the metropolitan.						
P13	13:02:44	areas... Um, which is good.						
P13	13:02:49	And it's showing me that the number of reports is the same. I opened up the sidebar to just look at the tables.						
P13	13:02:59	Myself, to kind of see whether I can see those.						
P13	13:03:10	Okay. So the system says true.						

P13	13:03:21	It is true. I think, ideally, in the best case scenario, I would... have some way to verify on the like tab portion. I think it's easy to verify the state one because or the.						
P13	13:03:39	Metropolitan area one, because the desired. field is the first one, but I can't see that same verification, or I can't do the same verification on the sidebar for.						
P13	13:03:52	the State Msa fraud and other data. Tally, but I will just trust the system response.						
P13	13:04:02	and I say my answer is true that the counts match. The system answer is true.						
P13	13:04:11	Um... I think I trust... I completely trust the first number because I can verify it in or the 2024 one, because I can verify it by just looking at the preview of the data.						
P13	13:04:30	I feel like I have less certainty for the second number just because I can't directly inspect.						
P13	13:04:38	the CSV in the sidebar tab. So I'm like 4.						
P13	13:04:44	Would you be ready to act on this result to make a decision for your job relying on this data for fraud analysis or enforcement decisions? Um... I think that because at this time.						
P13	13:04:59	I do not completely understand the. nuances to this data set. I wonder whether I might have missed certain.						
P13	13:05:12	tables that I should have checked. But I think that's just because of a lack of like background or domain knowledge. If I verify that the 2 source tables are the only tables that.						
P13	13:05:29	I needed to use to complete this task. Then I feel like I would be... more confident to make a decision, but I think at this point I am not ready to make any definitive.						
P13	13:05:42	Decisions without... having full confidence that I have.						
P13	13:05:47	comprehensively done the search. Okay, how did I arrive at this answer? Or what steps did I take?						
P13	13:05:59	So I think I will look back at my.						
P13	13:06:04	History. I think the 1st 2 or 3... The first 2 to 3 prompts that I used were.						
P13	13:06:16	aimed at. Just understanding how the system works.						
P13	13:06:24	In viewing the... people that... tables that are that.						
P13	13:06:33	appear in the sidebar.						
P13	13:06:38	I think at the beginning I was trying to figure out how to.						
P13	13:06:45	At the beginning. I was trying to figure out... One, how to reference the proper.						
P13	13:06:55	data sources into trying to. Better understand... the task. So after the 1st.						
P13	13:07:13	First few prompts I had a better. Understanding.						
P13	13:07:21	that...						
P13	13:07:25	the task. I had to do was to first... identify instances where.						
P13	13:07:45	this area occurs in the data set. Desserts related to.						
P13	13:07:55	Fraud and other reports. And then to... Cross check the values in numer reports across the.						
P13	13:08:11	relevant. data sources.						
P13	13:08:19	After I figured out... what I was supposed to do. I think that I was able to complete the task.						
P13	13:08:31	Mainly in this prompt. I think it was my last prompt.						
P13	13:08:44	in this prompt. You output of this prompt was.						
P13	13:08:52	It was a table that... Should the counts for those two.						
P13	13:08:59	data sources. I then verify this information with the I tried to verify.						
P13	13:09:09	with the preview in the sidebar. I was able to verify with.						
P13	13:09:20	Except... excerpt with the. Preview CSV file for the.						
P13	13:09:31	2024. For this report.						
P13	13:09:38	because I feel like desire that grow was the first one. It was the most able to.						
P13	13:09:47	Verify. for the other file.						
P13	13:09:58	Okay. I trust the system's recommendation dash decision.						
P13	13:10:05	I think I'm...						
P13	13:10:11	Hmm... I'm leaning towards a 4. I think my hesitations are not around the system itself, but my own limited understanding of the possible data sets included in.						
P13	13:10:26	whatever data set this system has access to. But I think the numbers that are that were produced.						
P13	13:10:36	feel good to me. Yeah. So I think the.						
P13	13:10:43	limitations, or my trust issues are not with the system itself, but with my own adequate understanding of the data sets and their structures and things like that.						

P13	13:10:55	Okay. Um... I don't think I really looked at the data set context.						
P13	13:11:05	Um, I do think it was helpful in just getting a sense of.						
P13	13:11:10	The possible data sources. I think the data preview was extremely useful.						
P13	13:11:19	Table relevance feedback. Oh, okay, I do not think...						
P13	13:11:34	Oh, okay.						
P13	13:11:43	Okay. I don't think I fully recognize the... structure of the relevant table feature, but I think it is really useful. I just wish I knew that I could just see.						
P13	13:12:00	this view earlier, because I think it gives me a better overview of the types of.						
P13	13:12:06	data sets that were selected. So I think that's pretty useful. The summary statistics.						
P13	13:12:14	I think it's helpful. I don't think I referenced it explicitly.						
P13	13:12:24	because I think. Some of the things I was looking for were aggregate values, so I didn't need to.						
P13	13:12:33	Understand the entire table summary operation steps, description.						
P13	13:12:47	I think, in theory, this is quite helpful. But I didn't use it.						
P13	13:12:57	I think I would have paid more attention to it if it was... like, if the task was more high stakes for... Myself. Operation Diagram. I think it's good, similar to the one above. I didn't explicitly look at it.						
P13	13:13:17	Um... because... I am not sure...						
P13	13:13:30	Yeah, I'm not sure I explored that tab. Code snippet... I also don't think I explored this tab.						
P13	13:13:42	or. the code explanation.						
P13	13:14:10	I also don't think I explored the column dictionary.						
P13	13:14:15	Step navigation. I think I mainly looked at... the first 2 tabs, and I think the first 2 tabs were helpful. I do like the drop down features, so they were quite useful for me.						
P13	13:14:35	The step description. I think it was helpful just giving an overview of... What?						
P13	13:14:44	is happening. in natural language.						
P13	13:14:52	And I think because it was in one of the tabs that it was frequently looking at.						
P13	13:14:57	It provided information that I was already... Seeing.						
P13	13:15:03	I did not use the code editing tab.						
P13	13:15:18	and I also don't think I use the script execution.						
P13	13:15:24	The downloadable files.						
P13	13:15:51	Now that I know that I can download the files, I will double check the first one.						
P13	13:16:07	Okay. And so by downloading the file I was able to just cross reference the answer, and it looks correct. So now downloaded File was extremely useful. Um... Anything else I would like to share about my experience. I think that there were a lot.						
P13	13:16:27	Uh, features that I underutilized that may have been.						
P13	13:16:35	Helpful. During the first during the task.						
P13	13:16:44	Yeah. And I think the particular features are like the downloadable files.						
P13	13:16:52	Um... for the filtering of the data sets, or like the.						
P13	13:16:59	Yeah, table relevance feedback, like being able to see... the.						
P13	13:17:08	table the possible tables that were included. So I think if I was aware of those features, I would have done this task maybe a bit more efficiently, and have felt more confident sooner.						
P13	13:17:24	Yeah. Can I edit my? response or you want me to just verbally say that like now that I have I am more aware of these features, like I feel like my confidence in the system response is higher.						
P13	13:17:40	Well, I think it's still fine. Yeah, but not necessarily testing by 1st use. Okay. Okay.						
P13	13:17:47	Nice. Okay. Evaluating interactive data discovery interfaces. I think I would like to use this frequent system frequently.						
P13	13:17:58	Um... Sure.						
P13	13:18:02	I do think it's helpful, like the. things I mentioned, like being able to... see and select things and some of the features that I liked. I found the system unnecessarily complex.						
P13	13:18:17	Um... I do think without any prior background or understanding of what the system does or the different features, it was hard to navigate.						
P13	13:18:31	Without. I think I just spent a lot of time doing, trying to figure out how the system works as opposed to completing the task. And I feel like there were some features that I underutilized or didn't utilize to their fullest extent. I thought the system was easy to use.						

P13	13:18:54	Um... Neutral, I think? My first use of the system, there was definitely a learning curve in just understanding.						
P13	13:19:04	how it works and how it operates, but I think if I were to do another task again, and being fully aware of the different features, I will be able to use it more effectively. So I think I'm neutral on this. I think I would need the support of a technical person to use this system.						
P13	13:19:21	I don't agree. I think that... This makes data processing a lot more friendly. I think there are some features like the coding or editing the code features. I do think.						
P13	13:19:35	May require someone who is unfamiliar, or, like, people who might be unfamiliar with writing code or SQL scripts just may not use those features. But I think for me personally, I don't think I need.						
P13	13:19:49	The support to utilize the functions I found useful.						
P13	13:19:53	I do think that the various. functions in the system were all well integrated, particularly, I really liked.						
P13	13:20:04	Um... the relevant tables like identifying relevant.						
P13	13:20:12	data tab. I think that was helpful for me. I thought there was too much inconsistency in the system.						
P13	13:20:24	I don't think I experienced this. So I'll put a 3. I would imagine most people would learn to use the system very quickly. I agree. I do think... They're like after I.						
P13	13:20:37	would believe that in, like, 2 or 3 uses of the system, I will be able to use it much more effectively. I found this system very cumbersome to use. I think, similar to previous responses. I think I'm kind of neutral on this. I do think there's a... Learning curve on my first experience, but I think it will get easier with time.						
P13	13:21:00	That being said, I do not feel confident when I was using the system for a first time... for the first time, but I do think if I were to do this task again, I would feel more confident. I needed to learn a lot of things before I could get going with the system.						
P13	13:21:18	Um... I will say, like, slightly agree, or, like, I feel like I just had to spend more time than I anticipated understanding various features.						
P13	13:21:33	for the features that I did identify were helpful in me solving the task.						
P13	13:21:39	Um... But there were some features I overlooked.						
P13	13:21:44	That would have made the task more simpler or more effective.						
P13	13:21:51	Okay, you too. I switch you to a different model. Yeah. Also like maybe remember. That's like a different model. Okay, like the same as the first one. Yeah, just.						
P13	13:22:04	Okay. Okay, so I am an analyst at the Massachusetts Health Department, and I'm monitoring water quality.						
P13	13:22:18	Add to public swimming beaches.						
P13	13:25:27	Okay, okay. Okay, so I am just reading the response.						
P13	13:25:34	Um...						
P13	13:25:43	Okay, so I have the table names and the key fields.						
P13	13:25:49	Boston Harbor Beach data set tables. Um...						
P13	13:26:27	So I think the Boston Harbor Beach data set tables will give me.						
P13	13:26:37	all the beaches that I'm interested in in the.						
P13	13:27:04	Once we select? table.						
P13	13:27:10	Um, the statewide.						
P13	13:27:16	So I... Oh my god.						
P13	13:27:20	This table... For the years 2013 and.						
P13	13:27:29	2012?						
P13	13:27:40	I want to only keep the rows. Where...						
P13	13:27:51	We're able to...						
P13	13:28:27	4. Okay, bacterial exceedance rate.						
P13	13:29:38	Okay, so I only select. The relevant years, the 2012 and 2013. I want to find a way to match the beaches with.						
P13	13:29:52	the the beaches match. the values.						
P13	13:30:06	the value the... Table names from... These tables.						
P13	13:30:16	to the...						
P13	13:30:23	Each day... In the...						
P13	13:31:13	When you first match the table names.						

P13	13:32:42	Okay, so... Would it be possible, like, if we pounces like I will see what I recently have, like, and, like, maybe get back at 2 like I mean, like, I actually is the longer time you spend with this, like, the more I learn, so I really appreciate this.						
P13	13:33:00	It just because, like, I rescheduled for three times, and he also like just have like health to do. It's like I push him back two times. Okay, yeah, yeah, no worries. Yeah, that sounds good.						
P13	13:33:12	Okay. Yes. Yeah, maybe we can wait for this like like this generation. I think is you can maybe like get back. And because like, okay, yeah, I would like use a different tab. Okay, sounds good. Yeah, no worries. Yeah, about like maybe 205. Okay.						
P13	14:09:37	Okay. Can you give me... The resulting table.						
P13	14:12:39	Okay. I think that was my final prompt, and hopefully, after that process is that I will be done.						
P13	14:12:48	I'm able to answer the question.						
P13	14:15:40	Okay, so it's giving me the count. of beaches where exceedance race was higher.						
P13	14:16:09	Okay, so I'm just having it output the 2 tables as downloadable CSVs. But I think my answer is.						
P13	14:16:18	267... The system answer is also 267, but I will double check it after.						
P13	14:16:26	the system. Oh. Oh, um...						
P13	14:17:35	Okay, I would just assume that the CSVs are correct. But in practice, I would probably verify that the 2 Csv's.						
P13	14:17:47	just do like a quick sanity check on the actual data.						
P13	14:17:51	After the processing step. After basically merging the 2 data sets and doing the filtering.						
P13	14:18:00	Um... But yeah, I will just move on with also like when you evaluate the system, treats this as a separate system. Yes, yes.						
P13	14:18:11	So I am semi-confident. neutral in the system. Answer.						
P13	14:18:18	Um... I think I'm neutral on making a decision.						
P13	14:18:33	I first... I first wanted to get an understanding.						
P13	14:18:41	Understanding of all the available data sources that I.						
P13	14:18:48	to use. So I asked for descriptive... So let me... of relevant data.						
P13	14:19:00	Then I saw... It's too relevant tables, and.						
P13	14:19:09	So that the information that... I needed Raquat would require me to merge the 2.						
P13	14:19:21	He has ads.						
P13	14:19:32	In order to... Let's see... And I... broke this.						
P13	14:19:44	I'll go into first merging, and then doing. The count.						
P13	14:19:51	I was given the count. Ideally...						
P13	14:20:01	I also asked for... tables to do a sanity check on the numbers.						
P13	14:20:12	and asked to download. The CSV files.						
P13	14:20:19	But was unable to. So, ideally would.						
P13	14:20:25	I've liked to double check. made sense.						
P13	14:20:36	Um... I think I'm neutral on trusting the system's decision or recommendation.						
P13	14:20:46	Um... I don't know.						
P13	14:20:51	I think it's neutral. I think I would use it as much as I use maybe like Chat or other Lims for this type of task.						
P13	14:21:01	I do not think the system was unnecessarily complex.						
P13	14:21:06	I do think it was pretty easy to use, I think.						
P13	14:21:09	It was just like a regular ChatGPT interface, but maybe with some kind of backend data plugin.						
P13	14:21:18	I do not think I need a technical person.						
P13	14:21:22	person to help me use the system. I do not think there were various functions that were integrated or does not seem.						
P13	14:21:32	Or... yeah, I guess the functions of just doing the data processing for me were well integrated. I thought there was too much inconsistency in this system.						
P13	14:21:43	I don't think I experienced that. So I'll just put neutral. I imagine people would learn to use this system very quickly. I agree. I think if they already have prior LLM or like chatbot experience, they could use this.						
P13	14:22:00	easily. I found the system very cumbersome to use.						
P13	14:22:05	Um, not really. I think I would have liked prettier display of the tables or previews of the tables, but.						

P13	14:22:12	That's just a small knit. I feel confident using the system.						
P13	14:22:21	Um, I think I'm neutral... Yeah, I feel like I'm not a power user, but I was able to get the task done. I needed to learn a lot of things before I could get going with the system.						
P13	14:22:36	I don't think so. I think I just needed to... better understand the data sets that I had access to. But I think the interaction with the process itself was pretty straightforward.
